Out of five years' crops in the Val d'Arno it will be seen that only one is for cattle, the rearing of which is but a subordinate branch of Tuscan husbandry. Except the herds and flocks belonging to the grand duke, and a few other large proprietors, in general only as many are kept as are indispensable for manuring the fields and other agricultural purposes. In 1832, the cattle, including buffaloes, were estimated at about 356,000, and the sheep at 600,000 head. The oxen are mostly of the Hungarian breed; they are not so much used for draught as buffaloes. From 60,000 to 70,000 sheep are pastured in the Maremma from Oct. to May, and in the Apennines the rest of the year. The wool of the Tuscan sheep is coarse, and little used for any but home manufactures; though during the short period of the French domination there was a considerable introduction of merino flocks. Cheese made of the ewes' milk is consumed in the country, but it is of very inferior quality. The horses of the grand duchy are among the worst in Europe, small, weak, and ill-shaped; and though some attempts have been made to improve the breed, we believe the success has been only very partial. On the other hand, however, the Tuscan asses are the strongest and finest in Italy. Goats, being easily fed, are kept in large numbers in most districts; and the *ricotta* cheeses are made of their milk. Figs are very abundant in the provs. of Sienna and Grosseto, where they room at large in the oak woods of the Maremma; and poultry and bees are pretty numerous.

It is a curious fact, that notwithstanding the houses of the peasants are so miserably ill-furnished, they are themselves of a very superior description. "In no country are the peasantry so well lodged. Probably half or more of their houses have been rebuilt within the last 60 years, and the remainder have been improved. It is reckoned, taking one house with another, they must have cost 1000 crowns or 5000 fr. each, and the average value of a farm is 2000 crowns. The living of the peasantry does not correspond to the luxury of their habitations: it is wholesome, though frugal. In most of the provs. bread is a mixture of rye, barley, and maize, with a little wheat; in some places, however, it is of pure wheat. Next to bread, beans form the principal nourishment of the cultivators. They drink but little wine; more

frequently aquarello or piquette. To eat fresh meat once a week is considered a luxury: and the poorest are satisfied with a piece of bacon. Salt fish is a good deal eaten. The import of salt cod into Tuscany exceeds 1,000,000 fr. a year." (*Bowring's Rep.* p. 44.) The day labourer gets on an average 10d. a day for 11 hours' work in the summer, and 8 hours in winter. An English gentleman farming an estate of 40 acres near Florence stated to Dr. Bowring, that the value of its gross produce amounted to about £315 a year, which after deducting the half share of the contadino, and the expenses either shared by him or falling solely upon the proprietor, with casual expenses, left him a nett profit of about £2 10s. per acre, or not quite 3½ per cent. interest on his outlay. (See *Report*, p. 46, 47.)

Tuscany has a great variety of mines, which were formerly extensively wrought; but many of these have been abandoned. The principal are the iron mines of Elba (which see, i. 824.) Copper is obtained at Monte Catini, Montieri, &c.; cinabar, lead, silver, &c., in different places. During a recent decennial period 413,000 lbs. a year of sulphur were produced at Perlia; and alum, nitre, various kinds of marble, &c., are found in different parts of the Maremma. But the most remarkable mineral product is borax, obtained from a collection of lagoons, unique in Europe, if not in the world, and spread over a surface of about 30 sq. m. at and near M. Cerboli, about 15 m. S. by W. Volterra. "As you approach the lagoons, the earth seems to pour out boiling water as if from volcanoes of various sizes, in a variety of soil, but principally of chalk and sand. The heat in the immediate vicinity is intolerable, and you are drenched by the vapour which impregnates the atmosphere with a strong and somewhat sulphurous smell. The ground, which burns and shakes beneath your feet, is covered with crystallizations of sulphur and other minerals. The vapours break forth violently in different parts of the mountain recesses: they only produce boracic acid, when they burst with a fierce explosion. In these spots artificial lagoons are formed by the introduction of the mountain streams. The hot vapour keeps the water perpetually boiling, and after it has received its impregnation during 24 hours at the most elevated lagoon, the contents are allowed to descend to the second lagoon, where a second impregnation takes place, and then the third, and so forth, till it reaches the lowest receptacle; and having thus passed through from six to eight lagoons it has gathered half per cent. of the boracic acid. It is then transferred to the reservoirs, and thence, after a few hours' rest, to the evaporating pans, where the hot vapour concentrates the strength of the acid, by passing under shallow leaden vessels from the boiling fountains above. There are from 10 to 20 pans, in each of which the concentration becomes greater at its descent, till it passes to the crystallizing vessel; from whence it is carried to the drying rooms, when after two or three hours it is ready to be packed for exportation. There are in all nine establishments. The whole amount produced varies from 7000 to 8000 lbs. of 12 oz. a day. The borax-lagoons have been brought into their present profitable action within a very few years. In 1833, only about 650,000 Tuscan lbs. were obtained; in 1836, 2,500,000 lbs. But the produce does not appear susceptible of much extension, as the whole of the water is now turned to account." (*Report*, p. 36-38.) The territory around Volterra is rich in salt springs, and the royal salt works employ about 90 labourers, and produce nearly 18,000,000 lbs. of salt a year, exclusive of the produce of Elba.

Among the *manufactures*, one of the principal is that of straw plait, so large an export from Leghorn. It is made with the straw of the beardless wheat, grown on soil the poorness of which renders the reed white, and is cut before it be quite ripe. Small patches of ground are chosen for its culture, on calcareous hills, and it is never manured. The seed is sown very thick; and Chateaufieux was assured that a crop of two acres would supply straw sufficient for the whole hat manufacture of Tuscany. (*Letters*, p. 75.) This manufacture employs a vast number of hands in Florence, Prato, and in all the districts from Florence to Pistoia on one side, and to Pisa on the other. It is estimated that between Florence and Prato only there are fifty manufactories; besides which, the females of nearly all the *contadini* families in the Val d'Arno employ themselves, more or less, in making straw hats. This branch of industry has latterly diminished; but when Chateaufieux wrote, it brought "an annual return of 3,000,000 fr. to the females of the country, for the men have no concern in it. Every young woman, for a few pence, purchases the straw she has occasion for; she exerts her talent to braid it as fine as possible; and sells, for her own profit, the hats she has made; the money which she thus earns at length forming her dower. Each individual in a family can earn from 30 to 40 pous (15d. to 20d.) a day in plaiting straw, while they can hire a poor woman from the Apennines for 8 or 10 sous (4d. or 5d. to do the domestic work." (*Id.* p. 74, 75.)

## TUSCANY (GRAND DUCHY OF).

From 3000 to 4000 looms in Florence 600 to 700 in Sienna, and some at Prato are engaged in the silk manufacture; and, in many parts of Tuscany, there are steam mills for the chain and tram. At Sienna, Prato, &c., are several factories for woollens, including *berretti* or red woollen caps, in imitation of those of Tunis. Pistoja has extensive iron works, hardware factories, and paper-mills; Prato, many copper foundries; and at Follonica nearly all the iron of Elba is smelted and wrought; carpets at Florence; leather and rope at Leghorn; marble and alabaster goods at Volterra, &c.; glass, earthenware, hats, hempen and linen fabrics are the other articles principally manufactured. At Prato, which town may give a fair average, the wages of a working man, in most trades, may be about  $2\frac{1}{2}$  pauls, or 1s. a day; few earn more than 3 pauls, (15s.), or less than 2 pauls (10d.). The retail prices of food are, bread about  $\frac{3}{4}$ d. per lb.; mutton and beef,  $1\frac{1}{4}$ d. to  $2\frac{1}{4}$ d. per lb.; oil,  $3\frac{1}{4}$ d. per lb.; *vin-ordinaire*,  $2\frac{1}{2}$ d. to  $\frac{3}{4}$ d. for about three bottles, &c. (*Bouring's Report*.)

The exports are principally oil, charcoal, borax, straw plait and hats, cork, rags, potash, tanned hides, marble, coral, woollen caps for the Levant, timber, paper, soap, tar, &c.; the imports, colonial produce, spices and dye stuffs, manufactured goods, hardware and earthenware, salted fish, &c. Leghorn (which see *ante*, 160) engrosses almost the whole foreign trade of the country. Accounts are kept in *lire* (= about 8d.) of 20 *soldi*, and 240 *danari* each. The paulo =  $\frac{1}{4}$  lire; the pezza =  $\frac{1}{2}$  lire. The Tuscan lb. = about 12 oz. troy. The staja, for corn, &c. =  $3\frac{1}{4}$ ths bushel: the moggio = 25 staja. The barile (of wine) = 10 imp. galls.; (of oil) =  $7\frac{1}{2}$  galls. The braccio = about 2 ft.: the seccata of 660 pertiche = about an acre.

The Government is an absolute monarchy, mildly exercised, being, in a practical point of view, not only the best in Italy, but one of the least exceptionable in Europe. The grand duke is assisted by a council of four ministers. Justice is usually administered by the syndics in the small towns and villages, from whose decision appeal may be made to the *vicario* of the canton. There are courts of primary jurisdiction in Florence, Leghorn, and Pistoja, from which appeal lies to the highest court, the *ruota* in Florence. Crime is rare, and is mostly confined to petty frauds and robberies. The civil legislation is far more defective than the criminal; and is often dilatory in the extreme. The total number of criminals and petty offenders convicted before the Tuscan courts in 1833 amounted to 1320. All the inhabitants, except a few Jews, Protestants, Greek communicants in Leghorn, &c., are Roman Catholics, being subordinate to the three archbishops of Florence, Pisa, and Sienna, and seventeen bishops. Education is almost exclusively in the hands of the ecclesiastics, but is notwithstanding better conducted than in most parts of Italy, especially the Papal states and the kingdom of Naples. There are universities in Pisa and Sienna; the former, in 1836, was attended by 545 students, and the latter by 254; and in Florence the famous schools of the Scolopi are attended by upwards of 1000 students. Numerous other superior schools and many learned societies exist, and no better evidence can be given of the increase of knowledge than the fact, that in 1814 there were but six printing presses in Florence, whereas in 1836 they amounted to 35. In 1835, about 21,300 children were attending the public schools. "Since 1830," says the *Journ. of Educ.* No. xvi., "much has been done to forward elementary education, though no general system be established. In the towns there are very good gratuitous schools, and Lancasterian schools have been established in various parts of the country. Holiday schools have also begun to be established." No. iii. of this *Journ.* has a very full account of the state of education, &c., in Tuscany.

Tuscany, as compared with its population and resources, has the smallest military force of any European state: it consists altogether of about 6000 men, of whom only 4500 are usually under arms. Military service is obligatory upon all classes, recruits being chosen by lot. The army is maintained on an economical footing, and officers are retained on duty till advanced in years, to avoid a multiplicity of pensions. The naval force is insignificant; there being only one ship of war to guard the port of Leghorn. (*Oudinot, Italie et ses Forces Milit.* p. 290-292.)

The roads, bridges, canals, &c., of Tuscany are well kept; the roads, in particular, are so good, that the conveyance of goods by the rivers and canals is comparatively little resorted to. Between Florence and Leghorn there is a daily post. Mendicancy is prohibited by law; but there are numerous and richly endowed charitable institutions. Workhouses exist at Florence, Sienna, and Arezzo, supported partly by the state, and partly by voluntary contributions and the labour of the inmates. Pisa and Sienna have deaf and dumb institutions; and, together with Florence, Leghorn, and Pistoja, establishments at which orphans are taught different trades. Several institutions distribute food, bedding, cloth-

## TVER.

ing, and working tools to persons in want, and at Prato is one which makes annual grants for study, and furnishes loans for various purposes. Government pawn banks and savings banks are established in the principal towns; the latter paying  $\frac{3}{4}$  per cent on deposits up to a certain amount. The public revenue, derived principally from the government rents, custom dues, stamps, salt monopoly, lottery, tobacco duties, patents for carrying arms, fees, fines, &c., amounted in 1830 to 25,104,898 Tuscan lire; and the expenditure to 23,078,029 lire. In every respect we may consider Tuscany as the most flourishing state of the Italian peninsula. At two distant epochs, in remote antiquity, and at the revival of science and commerce in the middle ages, Tuscany has been the seat of the highest degree of civilization in Europe. The Tuscans of the present day are admitted generally to excel the other inhabitants of Italy in their taste for the fine arts, and the polish of their manners; and the Italian, or, as it is sometimes called, *Lingua Toscana*, is here spoken in the greatest purity and perfection. Even within this limited territory, there are, however, no fewer than five different dialects—the Florentine, Senese, Pistoian, Pisan, and Aretine. The best Italian is said to be spoken in Sienna.

*History*.—Etruria was finally conquered by the Romans about anno 280 B.C. After the fall of the Western Empire, it successively belonged to the Goths and the Lombards, by the last of whom it was erected into a duchy. Charlemagne conquered Tuscany with the rest of the Lombard dominions; but under his feeble successors its marquises made their government hereditary and independent. The Tuscan territories were afterwards divided, in the 12th and 13th centuries, among the famous republics of Florence, Pisa, and Sienna; but these were re-united in 1531 into a duchy under Alexander de Medici, in whose family it continued till its extinction in 1737, when it fell into the hands of the house of Austria. In 1801, by the treaty of Lunéville, Napoleon erected it into the kingdom of Etruria for the prince of Parma; but in 1808 it was incorporated with the French empire, and subdivided into the depts. Arno, Mediterranean, and Ombrone. Since 1814 it has reverted to Austria, and is now governed by one of the Austrian archdukes. (*Bouring's Rep. on the Statistics of Tuscany; Rampoldi; Seristori, Statist. d'Italia; Sismondi, Agriculture Toscane; Chateauroux, &c.*)

TUSCARAWAS, county, O. Situated centrally in the E. part of the state, and contains 655 sq. m. Drained by Tuscarawas river and its branches. First settled in 1803 or 1804 by emigrants from W. Pennsylvania and Virginia who were chiefly of German descent. It contained in 1840, 17,448 neat cattle, 32,728 sheep, 26,535 swine; and produced 332,028 bushels of wheat, 29,120 of rye, 265,973 of Indian corn, 36,278 of buckwheat, 1349 of barley, 283,285 of oats, 108,296 of potatoes, 15,000 pounds of tobacco, 100,409 of sugar. It had 22 commission houses in foreign trade, 37 retail stores, 20 fulling-mills, seven flouring-mills, 30 grist-mills, 71 saw-mills, two oil-mills, 17 tanneries, six distilleries, two potteries, one printing-office; 143 schools, 9866 scholars. Pop. 25,631. Capital, New Philadelphia.

TUSCUMBIA, p. v., Franklin co. Ala., 66 m. W. Huntsville, 126 m. N. by W. Tuscaloosa, 792 W. Situated 1 mile S. of Tennessee r. It contains three churches, a Presbyterian, Methodist and Campbellite, all of brick, two male and two female seminaries, an iron foundry and workshops connected with the railroad, 200 dwellings, and about 2000 inhabitants. An extraordinary spring flows from a large fissure in a limestone rock, which discharges 20,000 cubic feet of water per minute, and it flows a considerable stream  $2\frac{1}{2}$  m. to Tennessee r. The depth of the stream is 8 feet where it issues from the rock, and it supplies the inhabitants with water. The Tuscumbia, Courtland and Decatur railroad extends from Tuscumbia to Decatur on Tennessee r., 44 miles, avoiding the Muscle Shoals.

TUY (an. *Tuda ad Fines*), a fortified town of Spain, in Galicia, cap. prov., on the Minho, which separates it from the Portuguese territory, 57 m. S. by W. Saint Jago. Pop. about 7000. (*Milano*.) It stands on a height surrounded by several small rivulets, and has always been a fortress of some strength, and a key of Spain on this side. It is regularly laid out, and has well paved and clean streets, several squares and bridges, a cathedral, several hospitals and convents, a seminary, college, and two barracks. Its principal manufacture is of table linen, in which its inhabitants trade with Portugal; but it also produces hats, leather, liquors, &c. Its climate is rendered unhealthy by adjacent marshes.

TVER, a gov. of European Russia, between the 56th and 59th degs. of N. lat., and the 32d and 38th of E. long.; having N. Novgorod, E. Jaroslavl and Vladimir, S. Moscow and Smolensk, and W. Pskov. Area estimated at 23,600 sq. m. Pop. in 1853, 1,297,900. The surface of this government is generally more elevated than that of other parts of European Russia; and several large rivers, as the Volga,

## TWEED.

Tvertza, Mologa, Mednevitza, &c., rise within its limits. In its W. part are several lakes. The Volga has its source in the lake of Selighur, and afterwards traverses the government in nearly its whole length from W. to E. The climate is severe, and the soil is but indifferently fertile. The harvests are precarious, and scarcely ever produce more than sufficient for home consumption. A good deal of hemp and flax, with beans, &c., are grown; but few kinds of fruit succeed. The forests are extensive, particularly in the N.; and about 319,000 deciatines of forest land belong to the crown. Manufactures of little consequence, but increasing: those of dyeing materials and spirituous liquors are the principal; and there are others of bricks, glass-ware, ropes, leather, woollen cloths, &c. This government is, however, distinguished for its commercial activity; and the capital of its merchants has been estimated at 17 million roubles. The trade centres mostly in Tver the capital and is facilitated by the Vischnij-Volotschok canal, which establishes a water communication between the Baltic and Caspian seas. The district of the government traversed by this canal is inhabited by a tribe of Carélians, and in the capital is a German colony; but the population is mostly Russians, of the Greek church. This government is divided into 12 districts; chief towns, Tver the capital, Torshok, Rjef and Bejetsk.

TVER, a town of European Russia, cap. of the above gov., on the Volga, here crossed by a wooden bridge 550 ft. in length, where it is joined by the Tvertza and Tmaka, and on the high road between Moscow and Petersburg; 90 m. N.W. the former; lat. 56° 51' 44" N., long. 35° 57' 36" E. Pop. in 1830, about 20,000. In respect of the regularity of its streets and buildings, Tver, ranks next to the two Russian capitals; but wants their bustle and animation. It is divided by the several rivers into the town proper, suburbs, and citadel. The last surrounded by a rampart of earth, comprises the governor's residence, an imperial palace, the cathedral, and seminary; and its numerous towers and cupolas give it, at a distance, an imposing appearance. The cathedral is a square edifice, with a lofty spire, surmounted by a gilded copper dome, and surrounded, lower down, by four similar domes. The seminary, founded in 1727, for the instruction of 700 pupils in the sciences and ancient languages, is established in a convent built in the 13th century. There are numerous churches, government buildings, barracks, inns, a theatre, &c., and several public promenades, planted with trees. Tver owes its present regularity and beauty to a fire which almost totally destroyed it in 1763; after which the Empress Catherine ordered it to be rebuilt on a uniform plan. Some houses are of stone, but the greater part are of wood; and the paving is mostly of the same material. Captain Cochrane states that an impost is levied upon every horse that passes the gates, expressly to pave the streets. (*Mod. Trav.*, xvii. 114.)

Tver is a place of considerable trade, a large part of its population being merchants, or engaged in the navigation of the Volga. It is an entrepôt for corn from the S. destined for Petersburg, and for goods conveyed overland to and from Riga. It is of considerable antiquity, having been the capital of a principality as early as the middle of the 13th century. It has frequently suffered from the plague, and been taken by both the Tartars and Poles; but it has remained, with little interruption, attached to the dominion of the Russians since 1490. (*Schnitzler; Possart; Mod. Trav.* &c.)

TWEED, one of the principal rivers of Scotland, forming, in the lower part of its course, the boundary between Scotland and England, has its sources on the E. side of Errickstane hill, about 6 m. from Moffat. Its course is first N.E. to Peebles; then E. with a little inclination to the S. to Melrose; it next passes Coldstream and Kelso; and pursuing a N. easterly direction, falls into the sea at Berwick. The descent from the source of the Tweed to Peebles is 1000 ft., and thence to Berwick about 500 ft. more. (*New Statistical Account of Scotland*, p. 2.) The waters of the Tweed are particularly pure and limpid. The first part of its course is through a fine pastoral country, especially celebrated in Scottish song, and the latter, through one that is rich and well cultivated. Including windings, its length is reckoned at rather more than 100 m. Notwithstanding it conveys a large body of water to the sea, it is not navigable for any considerable distance. The salmon fisheries on the Tweed are of very considerable value and importance; being, in this respect, second only to those of the Tay. The fish is almost all conveyed packed in ice, to London.

Among its principal tributaries is the Eterick, which, flowing from the S. parts of Selkirkshire, joins it at the Eildon hills. A little lower down it receives the Gala, from Mid Lothian, and the Leader from the borders of East Lothian. The Tevlot rises in Roxburghshire, on the confines of Dumfriesshire; and flowing N.E. and receiving several tributaries, it falls into the Tweed at Kelso. The Till rises in Northumberland, near Ingram, and, pursuing a

## TYNE.

N. westerly course, falls into the Tweed at Tilmouth. Near Berwick, the Tweed receives the Adder, a considerable river, formed by the junction of the Blackadder and Whiteadder, having their sources in the Lammemoor hills. The basin of the Tweed is estimated at about 1870 sq. m.

TWENTY-FOUR PERGUNNAHS, a district of British India, presid. and prov. Bengal, between lat. 21° 30' and 23° N., and long. 88° and 90° E., having N. Nudden, E. Jessore, W. the districts of Calcutta, Hooghly, and Midnapore, from which it is divided by the Hooghly river, and S. the bay of Bengal. Area 3690 sq. m. Pop., in 1822, 599,595. Its surface is a dead flat, intersected by arms of the Ganges, and comprising many extensive jeels or marshes, with a considerable portion of the jungly tract known as the Sunderbunds. It has long been progressively increasing in productiveness and importance; but, like the adjacent district of Bachergunge, has been notorious for the prevalence of dacoity or gang-robbery. The Hindoos are reckoned in proportion to the Mohammedans as 3 to 1. Total land revenue, 1829-30, 1,139,888 rupees.

TWICKENHAM, a village and par. of England, co. Middlesex, hund. Isleworth, on the Thames, 10 m. W. by S. London, and 2 m. S.W. Richmond. Area of par., 2440 acres. Pop. of do. in 1831, 4571. The village consists of a street nearly parallel to the river, and of a number of detached villas. It would hardly, however, have been worth notice in a work of this kind, but for its having possessed the villa famous as the favourite residence of the most elegant, harmonious, and correct of English poets, where he composed many of his noblest works, and where he expired on the 30th of May, 1744. But to the disgrace as well of the country as of the parties more immediately concerned, "Pope's Villa" has been levelled with the ground! The structure now lives only in his immortal verses; and even his grotto,

"Where, nobly-pensive, St. John sat and thought;  
Where British sighs from dying Wyndham stole,  
And the bright flame was shot through Marchmont's soul,"

has been suffered to go to ruin!

The church, a brick building, erected in 1714, contains the remains of the poet and of his parents. Pope himself raised a monument to the memory of the latter; and a monument to himself was raised, some years after his death, by his friends and literary legatees, Bishop Warburton. It is of grey marble, in the pyramidal form, and has a bust or medallion of the poet.

Among the existing villas in the vicinity of Twickenham, the most celebrated is that of Strawberry-hill, long the residence of Mr. Horace Walpole, by whom it was built, in a sort of trumpery Gothic style, and filled with a singular collection of rare, though mostly trifling articles. In the course of this year (1843), however, the collection has been sold by auction; and the villa itself, which is a very paltry affair, will probably soon share the fate of that of Pope. A national school, for the education of children of both sexes, was established in the village in 1809.

TWIGGS, county, Ga. Situated near the centre of the state, and contains 410 sq. m. Bounded S.W. by Ockmulgee r. It contained in 1840, 7401 neat cattle, 3013 sheep, 22,296 swine, and produced 14,743 bushels of wheat, 2519 of rye, 329,528 of Indian corn, 14,024 of oats, 16,325 of potatoes, 3,257,359 pounds of cotton. It had one commercial house in foreign trade, 10 retail stores, nine grist-mills; five saw-mills, one college, 20 students; three academies, 249 students. Pop.: whites, 4214; slaves, 4165; free coloured, 43; total, 8422. Capital, Marion.

TWINSBURG, p. l., Summit co., O., 142 m. N.E. Columbus, 300 W. Named from twin brothers who settled here in 1827. Drained by Tinker's creek, which flows into Cuyahoga r. It contains two churches, two stores, several mills: one academy, 70 students; eight schools, 205 scholars. Pop. 1039.

TYLER, county, Va. Situated in the N.W. part of the state, and contains 855 sq. m. Bounded N.W. by Ohio river, and drained by its tributaries, Middle Island, Fishing, and other creeks. It contained in 1840, 6265 neat cattle, 11,647 sheep, 12,854 swine; and produced 52,730 bushels of wheat, 1375 of rye, 223,079 of Indian corn, 57,535 of oats, 34,540 of potatoes, 1116 pounds of tobacco, 46,995 of sugar. It had 13 stores, one flouring-mill, 14 grist-mills, 18 saw-mills, three tanneries, one distillery, one pottery; 13 schools, 416 scholars. Pop.: whites, 6864; slaves, 85; free coloured, 5; total, 6954. Capital, Middlebourn.

TYNE, an important river in the N. of England, is formed by the junction of two very considerable streams, the N. and S. Tyne. The latter rises on the borders of Durham and Cumberland, near Cross-Fell, one of the highest mountains in the great central range; and the former in the moorlands of Northumberland close to the Scottish border. They unite a short way from Hexham. After their junction, the river takes an easterly direction: and dividing Northumber-

## TYNEMOUTH.

land from Durham, and passing Newcastle, falls into the sea at Tynemouth, having the towns of N. and S. Shields close to its embouchure.

The Tyne is navigable for ships of from 300 to 400 tons burden, as far as Newcastle, and is navigated a few miles farther by keels, a peculiar description of craft employed to carry coal to the coal-ships. The banks of the Tyne at Newcastle are steep, and the ground rises on each side to a considerable height. Down to a comparatively late period the salmon fisheries in this river were of considerable value and importance. In 1761, no fewer than 260 fish were caught at one draught at Newburn; and in 1775, 275 were landed at one draught at the Low Lights, near the mouth of the river. The fisheries have, however, for several years past, been all but annihilated; a circumstance which has been variously accounted for, but which, perhaps, is most properly to be ascribed to the locks constructed at Bywell to improve the navigation of the river, preventing the ascent of the fish in the breeding season to the shallow streams in the upper parts of the river. For an account of the trade and shipping of this river the reader is referred to the articles NEWCASTLE, SOUTH SHIELDS, and TYNEMOUTH, in this work.

TYNEMOUTH and NORTH SHIELDS, a parl. bor., co. Northumberland, on the N. bank of the Tyne, at its mouth in the German ocean, immediately opposite South Shields, and 7 m. E.N.E. Newcastle. The parl. bor., consisting of the townships of Tynemouth, N. Shields, Chirton, Preston, and Cullercoats, had in 1831, a pop. of 25,301, and in 1841, of 25,808. The township of Tynemouth occupies its most E. angle, and at its S.W. extremity is the town of N. Shields. The township of Chirton stretches along the whole S.W. side of the par. adjoining N. Shields. Preston adjoins both that town and the township of Tynemouth; it is of small extent, but contains some excellent houses, and a large population for its small area, as compared with some of the other townships. At the N. extremity of the township of Tynemouth is that of Cullercoats, which contains the fishing town of that name. This township comprises only about 5 or 6 acres of land, the greater part of which is covered with buildings. (*Bound. Rep.*) The village of Tynemouth has been much enlarged of late years; it is in general well built, and during the summer season is much resorted to for bathing. Its most remarkable edifice is the castle, originally a priory erected in the 11th century upon a previous foundation; it stands on a lofty and rocky peninsula, and is approached from the W. by a gateway flanked by towers, the whole being enclosed by a wall which runs for the most part along the edge of the cliff, at the N.E. angle of which is a lighthouse. Great care is taken by government to preserve the remains of the edifice, which forms a sea-mark for ships approaching the harbour or navigating the coast. The ruins of the priory within consist of a turret, now serving as a barrack, other buildings converted into military magazines, &c. Mr. Rickman says, that these exhibit very fine specimens of monastic remains, and the parts now existing, which belonged to the E. end, and some other portions of the church, are of remarkably beautiful design. The style is early English, with considerable enrichment, and though the stone is much decayed, it shows great delicacy of execution. (*Goth. Archit.*) A monument is about to be here erected in honour of Lord Colingwood. This church was parochial till 1657, when a new church was built near N. Shields. The living of Tynemouth, a vicarage, worth £298 a year, is in the gift of the duke of Northumberland. Two other churches have recently been erected; one at the W. end of the parish, and the other at the village of Tynemouth, which are curacies in the appointment of the vicar.

North Shields has increased rapidly of late years in size and importance, along with the increasing trade of the Tyne. It has many good streets and squares, a good market-place, gas and water works, a public library, scientific institution, neat theatre, Lancastrian and other schools, a sailors' relief society, meeting-houses for most of the principal dissenting sects, and a weekly newspaper. The Master Mariners' asylum, the site for which was granted by his grace the duke of Northumberland, is a neat stone edifice, recently built on the road leading from North Shields to Tynemouth. "The condition of the town of North Shields is certainly prosperous; it is progressively increasing in importance. The manufactories in this town are merely of those articles which are required by the ship-builder. Much building is in progress; and many improvements have been both commenced and agreed upon. New roads are to be made through the parish towards the W. and N.W.; and a railroad, 63 m. in length, now (1842) connects this town with Newcastle, passing through the township of Chirton. The town is chiefly extending itself on the W. and N.W. into Chirton and Preston townships, and in the directions of the town of Tynemouth. There is no doubt that in a few years the village of Chirton will be nearly united to North

## TYRE.

Shields by a continuous street, and that a great portion of the township of Preston will be occupied by that town. Already several buildings of a superior class have been erected in that township in its immediate neighbourhood; and the whole of a small part of that of Tynemouth, adjoining both Preston and Chirton is either covered with new buildings, or marked out as their future site. It is stated that the town had taken the direction of Tynemouth and Preston, rather than Chirton, in consequence of the land of the latter township adjoining that town being in settlement." (*Bound. Rep.*) There is a bar at the river's mouth, but at high water it may be crossed by vessels of 500 tons, and those of 300 tons lies close to the quays. Ships, as explained in the article on SOUTH SHIELDS (which see), lie in tiers in the river, and were formerly loaded with the coal brought down the river in lighters; but of late years, staiths and drops having been erected, the intervention of lighters is in a great measure superseded. The town as well as that of S. shields is included in the port of Newcastle; but, in 1840, there belonged to it especially, 337 ships; and during the same year nine vessels were built in the port, of the burden of 808 tons. The entrance to the Tyne is defended by Clifford's fort, on its N.E. bank, near which is the low lighthouse: the high lighthouse being on the hill opposite Dockwray-square. Its dependence on Newcastle is much complained of, as it obliges all ships to clear out from the latter. The shipping of coal is the staple business of the port.

The town is under the jurisdiction of the county magistrates, but has a court for the recovery of debts under 40s., held at Easter and Michaelmas, by the steward of Tynemouth manor. It is lighted and watched by commissioners under a local act. The erection of a bridge over the river was formerly contemplated; but that project has been abandoned, and the communication between the towns of North and South Shields is maintained by means of a steam ferry. The Reform Act conferred on the borough of Tynemouth the privilege of returning one member to the House of Commons. Registered electors, in 1839-40, 764.

TYRE (*Tûpos*), the principal city of Phœnicia, and the most celebrated emporium of the ancient world, on the S.E. coast of the Mediterranean, where the inconsiderable town of Tsour, with 1500 inhabitants, now stands, lat. 33° 17' N., long. 35° 14' 33" E. The harbour of the modern town is choked up; and we have introduced this article merely that we might have the opportunity of laying before the reader some statements respecting the commerce, arts, and navigation of the Tyrians, the most distinguished mercantile people of antiquity.

Tyre was founded by a colony from Sidon, the most ancient of the Phœnician cities. The date of this event is not certainly known, but Larches supposes it to have been 1600 years before the Christian era. (*Chronologie d'Hérodote*, cap. ii. p. 131.) It is singular that while Homer mentions Sidon, he takes no notice of Tyre, whose glory speedily eclipsed that of the mother city; but this is no conclusive proof that the latter was not then a considerable emporium. The prophets Isaiah, Jeremiah, and Ezekiel, who flourished from 700 to 600 years before Christ, represent Tyre as a city of unrivalled wealth, whose "merchants were princes, and her traffickers the honourable of the earth." Originally, the city was built on the main land; but having been besieged for a lengthened period by the Babylonian monarch Nebuchadnezzar, the inhabitants conveyed themselves and their gods to an island at a little distance, where a new city was founded, which enjoyed an increased degree of celebrity and commercial prosperity. The old city was, on that account, entitled Palætyre, and the other simply Tyre. The new city continued to flourish, extending its colonies and its commerce on all sides, till it was attacked by Alexander the Great. The resistance made by the Tyrians to that conqueror showed that they had not been enervated by luxury, and that their martial virtues were nowise inferior to their commercial skill and enterprise. The overthrow of the Persian empire was a less difficult task than the capture of this single city, which was not effected till a mound had been carried from the mainland to the island on which it was built. The victor had not magnanimity to treat the vanquished as their heroic conduct deserved. In despite, however, of the cruelties inflicted on the city, she rose again to considerable eminence. But the foundation of Alexandria, by diverting the commerce that had formerly centered at Tyre into a new channel, gave her an irreparable blow; and she gradually declined till, consistently with the denunciation of the prophet, her palaces have been levelled with the dust, and she has become "a place for the spreading of nets in the midst of the sea."

Commerce, Colonies, &c., of Tyre.—Phœnicia was one of the smallest countries of antiquity. It occupied that part of the Syrian coast which stretches from Aradus (the modern Roud) on the N., to a little below Tyre on the S., a distance of about 50 leagues. Its breadth was much less

## TYRE.

considerable, being for the most part bounded by mount Libanus to the E., and mount Carmel on the S. The surface of this narrow tract was generally rugged and mountainous; and the soil of the valleys, though moderately fertile, did not afford sufficient supplies of food to feed the population. Libanus and its dependent ridges were, however, covered with timber suitable for ship building; and besides Tyre and Sidon, Phœnicia possessed the ports of Tripoli, Byblos, Berytus, &c. In this situation, occupying a country unable to supply them with sufficient quantities of corn, hemmed in by mountains, and by powerful and warlike neighbours, on the one hand, and having on the other, the wide expanse of the Mediterranean, studded with islands, and surrounded by fertile countries, to invite the enterprise of her citizens, they were naturally led to engage in maritime and commercial adventures; and became the boldest and most experienced mariners, and the greatest discoverers, of ancient times.

From the remotest antiquity, a considerable trade seems to have been carried on between the eastern and western worlds. The spices, drugs, precious stones, and other valuable products of Arabia and India have always been highly esteemed in Europe, and have exchanged for the gold and silver, the tin, wines, &c., of the latter. At the first dawn of authentic history, we find Phœnicia the principal centre of this commerce. Her inhabitants are designated in the early sacred writings by the name of Canaanites,—a term which, in the language of the east, means merchants. The products of Arabia, India, Persia, &c., were originally conveyed to her by companies of travelling merchants, or caravans; which seem to have been constituted in the same way, and to have performed exactly the same part in the commerce of the east, in the days of Jacob, that they do at present. (Genesis xxxvii. 25, &c.) At a later period, however, in the reigns of David and Solomon, the Phœnicians, having formed an alliance with the Hebrews, acquired the ports of Elath and Eziongaber, at the N.E. extremity of the Red sea. Here they fitted out fleets, which traded with the ports on that sea, and probably with those of southern Arabia, the W. coast of India, and Ethiopia. The ships are said to have visited Ophir; and a great deal of erudition has been expended in attempting to determine the exact situation of that emporium or country. We agree, however, with Heeren in thinking that it was not the name of any particular place; but that it was a sort of general designation given to the coasts of Arabia, India, and Africa, bordering on the Indian ocean; somewhat in the same loose way as we now use the terms East and West Indies. (See the chapter on the *Navigation and Commerce of the Phœnicians*, in the translation of Heeren's work.)

The distance of the Red sea from Tyre being very considerable, the conveyance of goods from the one to the other by land must have been tedious and expensive. To lessen this inconvenience, the Tyrians, shortly after they got possession of Elath and Eziongaber, seized upon Rhinoculura, the port in the Mediterranean nearest to the Red sea. The products of Arabia, India, &c., being carried thither by the most expeditious route, were then put on board ships, and conveyed by a brief and easy voyage to Tyre. If we except the transit by Egypt, this was the shortest and most direct and for that reason, no doubt, the cheapest, channel by which the commerce between southern Asia and Europe could then be conducted. But it is not believed that the Phœnicians possessed any permanent footing on the Red sea after the death of Solomon. The want of it does not, however, seem to have sensibly affected their trade; and Tyre continued, till the foundation of Alexandria, to be the great emporium for eastern products, with which it was supplied by caravans from Arabia, the bottom of the Persian gulf, and from Babylon, by way of Palmyra.

The commerce of the Phœnicians with the countries bordering on the Mediterranean was still more extensive and valuable. At an early period they established settlements in Cyprus and Rhodes. The former was a very valuable acquisition, from its proximity, the number of its ports, its fertility, and the variety of its vegetable and mineral productions. Having passed successively into Greece, Italy, and Sardinia, they proceeded to explore the southern shores of France and Spain, and the northern shores of Africa. They afterwards adventured upon the Atlantic, and were the first people whose flag was displayed beyond the Pillars of Hercules.\*

Of the colonies of Tyre, Gades, now Cadiz, was one of the most ancient and important. It is supposed by M. de St. Croix to have originally been distinguished by the name of Tartessus or Tarshish, mentioned in the sacred writings (*De l'Etat et du Sort des Anciennes Colonies*, p. 14.) Heeren on the other hand, contends, as in the case of Ophir, that by Tarshish it was to be understood the whole southern part of Spain, which was early occupied and settled by Phœnician colonists. (See also *Huet, Commerce des Anci-*

*ennes*, cap. 8.) At all events, however, it is certain that Cadiz early became the centre of a commerce that extended all along the coast of Europe as far as Britain, and perhaps the Baltic. There can be no doubt that by the Cassiterides or Tin islands, visited by the Phœnicians, is to be understood the Scilly Islands and Cornwall. The navigation of the Phœnicians, probably also extended a considerable way along the western coast of Africa; of this, however, no details have reached us.

But of all the colonies founded by Tyre, Carthage has been by far the most celebrated. It was at first only a simple factory; but was materially increased by the arrival of a large body of colonists, forced by dissensions at home to leave their native land, about 883 years B.C. (*St. Croix*, p. 20.) Inbued with the enterprising mercantile spirit of their ancestors, the Carthaginians rose in no very long period to the highest eminence as a naval and commercial state. The settlements founded by the Phœnicians in Africa, Spain, Sicily, &c., gradually fell into their hands; and after the destruction of Tyre by Alexander, Carthage engrossed a large share of the commerce of which it had previously been the centre. The history, commerce, and institutions of Carthage, and the misfortunes by which she was overwhelmed, have, however, been already noticed in this work (See *CARTHAGE*); and we shall only, therefore, observe, that commerce, instead of being, as some shallow theorists have imagined, the cause of her decline, was the real source of her power and greatness; the means by which she was enabled to wage a lengthened, doubtful, and desperate contest with Rome herself for the empire of the world.

The commerce and navigation of Tyre probably attained their maximum from 650 to 550 years B.C. At that period the Tyrians were the factors and merchants of the civilized world; and they enjoyed an undisputed pre-eminence in maritime affairs. The prophet Ezekiel (chap. xxvii.) has described in magnificent terms the glory of Tyre; and has enumerated several of the most valuable productions found in her markets, and the countries whence they were brought. The fir trees of Senir (Hermion), the cedars of Lebanon, the oaks of Bashan (the country to the E. of Galilee), the ivory of the Indies, the fine linen of Egypt, and the purple and hyacinth of the isles of Ellshah (Peloponnesus), are specified among the articles used for her ships. The inhabitants of Sidon, Arvad (Aradus), Gebel (Byblos), served her as mariners and carpenters. Gold, silver, lead, tin, iron, and vessels of brass; slaves, horses, mules, sheep, and goats; pearls, precious stones, and coral; wheat, balm, honey, oil, spices, and gums; wine, wool, and silk; are mentioned as being brought into the port of Tyre by sea, or to its markets by land, from Syria, Arabia, Damascus, Greece, Tarshish, and other places, the exact site of which it is difficult to determine.†

Such, according to the inspired writer, was Tyre, the "Queen of the waters," before she was besieged by Nebuchadnezzar. But, as has been already remarked, the result of that siege did not affect her trade, which was as successfully and advantageously carried on from the new city as from the old. Inasmuch, however, as Carthage soon after began to rival her as a maritime and mercantile state, this may, perhaps, be considered as the era of her greatest celebrity.

It would not be easy to over-rate the beneficial influence of that extensive commerce from which the Phœnicians derived such immense wealth. It inspired the people with whom they traded with new wants and desires, at the same time that it gave them the means of gratifying them. It everywhere gave fresh life to industry, and a new and powerful stimulus to invention. The rude uncivilized inhabitants of Greece, Spain, and northern Africa, acquired some knowledge of the arts and sciences practised by the Phœnicians; and the advantages of which they were found to be productive secured their gradual though slow advancement.

Nor were the Phœnicians celebrated only for their wealth, and the extent of their commerce and navigation. Their fame, and their right to be classed among those who have conferred the greatest benefits on mankind, rest on a still more unassailable foundation. Antiquity is unanimous in ascribing to them the invention and practice of all those arts, sciences, and contrivances that facilitate the prosecution of commercial undertakings. They are held to be the inventors of arithmetic, weights and measures, of money, of the art of keeping accounts, and, in short, of everything that belongs to the business of a counting-house. They were, also, famous for the invention of ship-building and navigation; for the discovery of glass; for their manufactures of fine linen and tapestry; for their skill in architec-

† There is, in Dr. Vincent's *Commerce and Navigation of the Ancients in the Indian Ocean* (vol. ii. pp. 624–652), an elaborate and (like the other parts of that work) profusely commented on this chapter of Ezekiel, in which most of the names of the things and places mentioned are satisfactorily explained. (See also *Hæren on the Phœnicians*, cap. iv.)

\* Mossa Calpe and Mossa Abyla, the Gibraltar and Ceuta of modern times.

## TYRINGHAM.

ture, and in the art of working metals and ivory : and still more for the incomparable splendour and beauty of their purple dye. (See the learned and invaluable work of the President de Gouget, *Sur L'Origine des Loix, &c.*, English trans. vol. i. p. 296, and vol. ii. p. 95-100; see also the chapter of Heeren on the *Manufactures and Land Commerce of the Phœnicians*.)

But the invention and dissemination of these highly useful arts form but a part of what the people of Europe owe to the Phœnicians. It is not possible to say in what degree the religion of the Greeks was borrowed from theirs; but that it was to a pretty large extent seems abundantly certain. Hercules, under the name of Melcarthus, was the tutelary deity of Tyre; and his expeditions along the shores of the Mediterranean, and to the straits connecting it with the ocean, seem to be merely a poetical representation of the progress of the Phœnician navigators, who introduced arts and civilization, and established the worship of Hercules, wherever they went. The temple erected in honour of the god at Gades was long regarded with peculiar veneration.

The Greeks, were, however, indebted to the Phœnicians, not merely for the rudiments of civilisation, but for the great instrument of its future progress—the gift of letters! No fact in ancient history is better established than that a knowledge of alphabetic writing was first carried to Greece by Phœnician adventurers; and it may be safely affirmed, that this was the greatest boon any people ever received at the hands of another.

Before quitting this subject, we may briefly advert to the statement of Herodotus with respect to the circumnavigation of Africa by Phœnician sailors. The venerable father of history mentions, that a fleet fitted out by Necho, king of Egypt, but manned and commanded by Phœnicians, took its departure from a port on the Red sea, at an epoch which is believed to correspond with the year 604 before the Christian æra, and that, keeping always to the right, they doubled the southern promontory of Africa; and returned, after a voyage of three years, to Egypt, by the Pillars of Hercules. (*Herod. lib. iv. § 42*.) Herodotus further mentions, that they related that, in sailing round Africa, they had the sun on their right hand, or to the north—a circumstance which he frankly acknowledges seemed incredible to him, but which, as every one is now aware, must have been the case if the voyage were actually performed.

Many learned and able writers, and particularly Gosselin (*Recherches sur la Géographie Systématique et Positive des Anciens*, tome i. p. 204-217), have treated this account as fabulous. But the objections of Gosselin have been successfully answered in an elaborate note by Larcher (*Herodote*, tome iii. p. 458-464, ed. 1802); and Major Rennel has sufficiently demonstrated the practicability of the voyage. (*Geography of Herodotus*, p. 682, &c.) Without entering upon this discussion, we may observe, that not one of those who question the authenticity of the account given by Herodotus presume to doubt that the Phœnicians braved the boisterous seas on the coast of Spain, Gaul, and Britain; and that they had, partially at least, explored the Indian ocean. But the ships and seamen that did this much, might, undoubtedly, under favourable circumstances, double the cape of Good Hope. The relation of Herodotus has, besides, such an appearance of good faith, and the circumstance which he doubts, of the navigators having the sun on the right, affords so strong a confirmation of its truth, that there really seems no reasonable grounds for doubting that the Phœnicians proceeded, by 2000 years, Vasco de Gama in his perilous enterprise. (We have borrowed this article from the *Commercial Dict.*)

TYRINGHAM, p. t., Berkshire co., Mass., 130 m. W. Boston, 360 W. Watered by branches of Housatonic river. It contains three churches, a Congregational, Baptist, and Methodist, and a society of *Shakers*, four stores, one fulling-mill, two grist-mills, seven saw-mills, one paper-mill; 15 schools, 407 scholars. Pop. 1477.

TYROL and VORARLBERG (an. *Rætia*, with part of *Noricum*), a prov. of the Austrian empire, principally between the 46th and 48th degs. of N. lat., and the 10th and 13th of E. long.; having E. the archd. of Austria (Salzburg, &c.), and Carinthia; S., the Lombardo-Venetian kingdom; W., Switzerland (the Grisons, &c.) and the princip. of Liechtenstein; and N., Bavaria. Length, E. to W., about 120 m.; average breadth somewhat less than 100 m. Area estimated at about 11,000 sq. m. Pop., in 1838, 831,298. This country may be regarded as an extension of Switzerland towards the E. It is traversed in its whole extent by the main ridge of the Alps, which has here some of its loftiest summits, including, among others, mount Ortelier 12,823 ft., and the Gross Guckner 12,567 ft. above the level of the sea. This grand chain separates the waters that flow N. to the Rhine and the upper Danube from those that flow S. to the Po and the Adriatic, and the lower Danube. But, exclusive of this gigantic chain, an inferior chain from 50 to 60 m. S. of the latter divides the country into three por-

## TYROL.

tions: the valley of the Inn, to the N. of the high Alps; that of the Drave, between the high Alps and the inferior chain; and the country to the S. of the latter drained by the Adige, Piave, and other rivers flowing into the Adriatic. The Vorarlberg, N.W. from the Tyrol, forms part of the basin of the Rhine, being drained by the Ill and Bregenzer, and bounded on the N.W. by the lake of Constance. There are many small lakes in the country, but none are of any consequence; the Achensee, in the S. is the principal. The climate is very various. To the N. of the high Alps, and in the intermediate district, or valley of the Drave, it is very severe. Some very extensive mountain tracts are covered with immense glaciers and the accumulated snows of ages. The medium temperature of the year at Innsbruck is about 50°; at Bolzen, or Bolzano, 57° Fahr. But the narrow valleys in the S., which unite with the plain of Lombardy, are very hot in summer; and frequently, indeed, experience the sirocco. In general the spring and summer are wet, and autumn is the most agreeable season.

The central chain of the Alps is composed chiefly of granite, flanked on either side with a zone of slate, overlapped by limestone: the accompanying ranges on both the N. and S. sides are mostly calcareous. Estimating the total extent of land in the prov. at about 7,000,000 acres, it has been distributed in *Becker's Handb. Lexicon*, Vienna, 1836, as follows: viz., cultivated or arable land, 536,520 acres: vineyards, 78,636 do.: meadows and gardens, 615,620 do.: commons, 922,593 do.; and forests, 2,767,496 do., making in all 4,920,873 acres; leaving consequently, above 2,000,000 acres of land occupied by inaccessible mountains, glaciers, and snow-tracts. The products and husbandry in the S. are much the same as in the N. parts of Lombardy. In other parts of the Tyrol, maize, wheat, and pulse are grown in the bottoms, and scanty crops of buckwheat, rye, and oats on the mountain sides; but the produce of corn is insufficient for the consumption. The Tyrol is, in fact, like the greater part of Switzerland, a pastoral country; the chief wealth of its inhabitants consisting in their cattle and other live stock. The cattle are kept in the valleys throughout the winter, but are in spring driven to the uplands, proceeding higher and higher as the lower meadows become exhausted and the upper divested of snow; and returning again in September. The meadows yielding the thickest grass are set aside for a hay crop. The hay, when cut, is carefully dried under cover, and stored up in sheds; but it is quite insufficient for the winter supply of the cattle, many of which have to be fed on maize stalks, ash leaves, &c. In the circle of Rovereto, and other parts of the country adjoining Italy a good many silk-worms are reared; and the annual average produce of silk is estimated at 3200 centners. The rearing of canary birds, though apparently an insignificant branch of industry, is pretty extensively carried on at Imst, and other places in the valley of the Inn; and, in fact, the Tyrol supplies most parts of Europe with these songsters. Among the wild animals are wolves, wild boars, and bears; the clefts of the rocks afford shelter to the marmots; and the chamois finds refuge on the highest summits, or in places secure from the approach of the hunter.

The precious metals and copper are met with; but they are of little importance. Iron and salt are abundant in certain districts; and though mining industry be in a rather backward state, are produced in considerable quantities. Silk is manufactured in the S.; next to which, iron ware, plates, nails, and other kinds of hardware are the principal products. Leather, linen fabrics, wooden articles (some of which are executed with great skill, and display much ingenuity), glass, paper, toys, and (at Innsbruck, Imst, &c.), some cotton goods are produced. But the principal exports are cattle, cheese, silk, iron, salt, wine, timber, tobacco, and other raw produce, in return for corn and most sorts of manufactured goods. The inhabitants are exceedingly industrious, ingenious, and inventive; but the poverty of the country obliges them, notwithstanding, to migrate in great numbers; and several thousands annually leave their homes for Swabia, Bavaria, Italy, and more distant countries, where they exercise various functions, and continue for a longer or shorter time till, by dint of economy, they have saved what they suppose will maintain them at home, when they immediately return. A considerable transit trade is carried on across the Tyrolese Alps, between Italy and the S. parts of Germany. The principal route for this is by the road over the Brenner pass, between Innsbruck and Brixen; and thence to Bolzano and Rovereto. At its highest point this road attains to an elevation of 4634 ft. At the W. extremity of the Tyrol is the famous military road over Monte Stelvio, rising to the prodigious height of 8960 ft. above the sea! being the highest elevation of any carriage road in Europe.

In the official registers of the Austrian empire, Tyrol bears only the appellation of county; but it has its own diet composed of four orders of members—the clergy, nobility, the deputies of the towns, and those of the peasantry, all of whom assemble in one chamber. No new tax can be im-

## TYRONE.

posed without the consent of this body; and when it is granted, the sovereign is bound to make an explicit acknowledgment that the states might have refused it had they chosen. In addition to the states, there exists a permanent deputation and tribunal, in which the peasantry are represented. The only imposts are a land tax, payable indiscriminately by all classes, and a charge on the higher classes, consisting of a per centage on pensions, tithes, and rents.

The Tyrol is divided into seven circles, their chief towns being Botzen, Schwatz, Imst, Bruneck, Trent, Roveredo, and Brenzen; in each of which is a court of justice. Innsbruck is the general cap. and the seat of the highest judicial tribunal. The population is almost wholly Roman Catholic, under the superintendence of ten bishops subordinate to the archbishop of Salzburg.

The character of the Tyrolese is said to contrast favourably with that of the Swiss. In the N. or German portion of the country they are neither so fawning nor mercenary as the latter; and in the S. they approach the Italian standard in their manners and disposition as well as their language. Though quite as attached to personal and national liberty as the Swiss, the Tyrolese have always been steadfast adherents of Austria; and, next to the archduchy, the Tyrol may be depended upon as the prov. most likely to remain firmly attached to the house of Hapsburg in the event of any future dismemberment of the empire. But the Austrians draw little or no disposable military force from the Tyrol. Its inhabitants form an irregular militia, and act with the greatest vigour and alacrity in the defence of their country; but their natural repugnance to a disciplined military life is so great, that all attempts to extend the conscription to this prov. have hitherto proved unsuccessful. Of late, indeed, a part of the regiment of *Jägers*, raised in the Tyrol for its own defence, has been removed into another prov.; but this measure appears to have produced much dissatisfaction.

The dress of the peasantry is peculiar. The principal finery of the men consists of a straw hat ornamented with ribbands and nosegays; the dress of the women consists of a thick and short gown, stockings with cross stripes, and a cap tapering in the shape of a sugar-loaf. Music and dancing, rifle-shooting and athletic exercises, are the favourite amusements of the Tyrolese; in all which they excel.

From the fall of the Roman empire, this region ceased to be permanently united under one head till 1288; not long after which period, it passed by inheritance to the dukes of Austria, to whose descendants it has ever since belonged, with the exception of the period from 1806 to 1814. From 1806 to 1809 it belonged to Bavaria. The government of the Bavarians was, however, very disturbed; and the Tyrolese under Hofer maintained a doubtful contest with them and the French till 1810; when Hofer, having been taken and shot at Mantua, the Tyrol was governed by the French till 1814, when it reverted to Austria. (*Austrian Nat. Encyc.; Berghaus; Malte-Brun, &c.*)

TYRONE, an inland co. of Ireland, prov. Ulster, having N. Londonderry, E. Lough Neagh and Armagh, S. Monaghan and Fermanagh, and W. Donegal. It contains 754,305 acres, of which 171,314 are unimproved mountain and bog, and 27,961 water, being a fraction of Lough Neagh. Surface in many places, especially on the N. and W., rough and mountainous; but there is, notwithstanding, a large extent of fertile land. Property mostly in very large estates. Farms of various sizes; those in the mountainous districts large, and seldom much subdivided. Tillage farms small, and generally held under partnership leases; and it is almost needless to add that wherever this is the case agriculture is execrable. A great deal of work is done by the spade; and where ploughs are used, they are sometimes drawn by horses, bullocks, and milch cows, all yoked together. Potatoes and oats, the principal crops. Cattle and sheep very inferior. "Tenants may do what they will in regard to the management of their farms, if they only pay the rent." (*Poor Inquiry*, Append. F., p. 323.) Average rent of land, 14s. 6d. an acre. Habitations of the bulk of the people extremely mean: they live principally on oatmeal and potatoes, rarely tasting butchers' meat. Linen manufacture pretty generally diffused. A coal mine is wrought between Dungannon and Stewartston, but the coal is inferior. There is a good pottery near Dungannon. This is one of the counties in which illicit distillation was most prevalent. Principal rivers, Blackwater, Foyle, Ballinderry, with several others of inferior importance.

Tyrone contains four baronies, and 35 parishes; and returns three members to the House of Commons, being two for the county, and one for the borough of Dungannon. Registered electors for the county in 1839-40, 3594. In 1831 Tyrone had 54,063 inhabited-houses, 57,035 families, and 304,468 inhabitants, of whom 149,410 were males, and 155,058 females.

TYRONE, p. t., Stenben co., N. Y., 202 m. W. by S. Albany, 310 W. It contains two churches, a Methodist and

## ULM.

Presbyterian, six stores, two fulling-mills, two grist-mills, six saw-mills; 12 schools, 680 scholars. Pop. 2122.

TYRONE, t., Perry co., Pa., 7 m. S.W. Bloomfield. Drained by Sherman's creek and its branches. It contains the county poorhouse, nine stores, two furnaces, two fulling-mills, one woollen factory, three flouring-mills, four grist-mills, 11 saw-mills, five tanneries, three distilleries, three potteries; 13 schools, 640 scholars. Pop. 2391.

TYRONE, t., Huntingdon co., Pa. It has four stores, two forges, one fulling-mill, four grist-mills, six saw-mills, three tanneries, one distillery; six schools, 331 scholars. Pop. 1226.

TYRREL, county, N. C. Situated in the E. part of the state, and contains 740 sq. m. Bounded N. by Albemarle sound, E. by the Atlantic, along which are Roanoke and several other islands belonging to it. Drained by Alligator river, which enters Albemarle sound by a broad estuary. It contained in 1840, 4133 neat cattle, 1947 sheep, 8540 swine; and produced 8083 bushels of wheat, 108,641 of Indian corn, 2517 of oats, 21,704 of potatoes, 20,335 pounds of rice, 22,963 of cotton. It had 22 stores, six grist-mills, one saw-mill, 69 tanneries, 16 distilleries. Pop.: whites, 3160; slaves, 1411; free coloured, 86; total, 4657. Capital, Columbia.

TYSDRUS or TYSDRA, an ancient and considerable, but now ruined, city of N. Africa, reg. of Tunis, at present represented by the inconsiderable village of El Jemne, 110 m. S. by E. Tunis, and 30 m. W. by S. the port of Mehadlah, or Africa. The walls of the ancient town may still be distinctly traced, and it comprises, besides the foundations of temples and other buildings, the mutilated fragments of columns, statues, &c. But the distinguishing feature of the place, and that which gives it all its present interest, is its superb amphitheatre. This noble ruin, the exterior of which is in a high state of preservation, is of vast size and magnificence, being 429 feet in length, by 368 feet in breadth, and 96 feet in height, so that it is inferior only, in respect of magnitude, to the Colosseum and the amphitheatre of Verona. It consisted originally of 64 arches, and four rows of columns of the Composite order, placed above each other. At each extremity was a grand entrance; but one of these, with an arch on either side, was destroyed, about a century ago, by one of the beys of Tunis, to prevent the ruin being occupied as a fortress by his rebellious subjects. The arena is nearly circular. There are no inscriptions by which we may learn the date or founders of this magnificent structure; but Dr. Shaw supposes, from its similarity to other structures of the same period, that it is of the age of the Antonines; and as the elder Gordian was proclaimed emperor in Tysdrus, he concludes that he may, probably out of gratitude to the citizens, have presented them with this grand structure for the celebration of those barbarous sports then so much in fashion. (*Travels*, p. 117, 4to ed.; see also *Temple's Excursions in Algiers and Tunis*, i., 150.)

## U.

UDINE, a town of Austrian Italy, cap. deleg. Udine or Friuli, on the Roja, 60 m. N.E. Venice. Pop., in 1837, 19,783. (*Berghaus*.) It is fortified and well built, but, from its situation in a wide and level plain, its external appearance has nothing striking. Its streets are lined with arcades; and in the great square is a fine monument in commemoration of the treaty of Campo Formio (which village is in the immediate neighbourhood). Principal buildings, the cathedral, with some handsome marble columns and bas-reliefs, two parish churches, the chief guard-house, surmounted by a tower and two iron figures to strike the hours, the town-hall, bishop's palace, a good opera-house, &c. The old castle, on elevated ground in the middle of the town, is now a prison. The French, during their occupation, constructed several public walks and otherwise embellished the town. Udine is the seat of the provincial assembly and superior courts, and has a lyceum, two gymnasia, a high school, episcopal seminary and library, a society of agriculture, several hospitals, asylums, &c. The inhabitants are principally engaged in the silk trade, but they also manufacture linen fabrics, leather, paper, and liquors. (*Aust. Nat. Encyc., &c.*)

UIST, NORTH AND SOUTH. See HEBRIDES.

ULEABORG, a town and seaport of Finland, cap. län, or district of its own name, on a peninsula at the mouth of the Ulea in the gulf of Bothnia, 68 m. S.S.E. Tornea. Pop. about 5000. It is regularly built, and is, after Abo, the principal commercial town of the province. Its harbour is, unfortunately, in great part choked up with sand. The chief exports are pitch, tar, fish, and salted butter. It was founded in 1605, and has frequently suffered from fire, by which it was nearly destroyed on May 25, 1822. (*Schnitzler, La Russie; Possart*.)

ULM, a frontier town of Wirtemberg, cap. circ. Danube,

## ULSTER.

on the Danube where it begins to be navigable, 45 m. S.E. Stuttgart, and 44 m. W. by N. Augsburg. Pop. about 14,600. It has an antiquated appearance, and, though it has some traffic, a garrison, &c., it is dull. The cathedral, a fine Gothic building, has an unfinished tower, 337 German feet in height. The body of the building is 416 feet in length, 166 feet in breadth, the nave being 152 feet in height (*Stein*), so that it is larger than any other church in Germany. This edifice was erected, between 1377 and 1494, at the sole expense of the citizens of Ulm. It has some beautiful stained glass and carved work, and a tablet commemorating a showman's feat of the Emperor Maximilian, in 1492, who is said to have stood on the parapet of the tower, on one foot, balancing a coach-wheel with the other! Several other buildings are worthy of notice, as the town-hall, government and custom houses, corn-hall, and arsenal. Ulm has a gymnasium, a large and richly-endowed hospital, a female orphan asylum, and the house of correction for the circle. Tobacco pipe-bowls, linen fabrics, leather, paper, vinegar, &c., are made by the inhabitants, many of whom also engage in horticulture, boat-building, the transit of goods, and the rearing of snails for export to Bavaria and Austria. Large quantities of Rhenish, Swiss, and other wines, are brought thither to be shipped down the Danube. Ulm was formerly strongly fortified, and a military post of importance. (*Berghaus; Memminger's Württemberg; Spencer's Germany.*)

In 1805, Ulm was the theatre of some most important military events. Austria, having declared war against France, pushed forward a strong army into Bavaria, under General Mack, who established his head quarters at Ulm. But Napoleon having succeeded by a series of masterly manoeuvres in cutting off Mack's communications with Austria, the latter was cooped up in the city with all that portion of his army, amounting to about 26,000 men, that had not already fallen into the hands of the French. Considering the strength of the place, and the numbers of the garrison, a vigorous resistance might have been anticipated; but, instead of this, Mack capitulated on the 17th of October, and delivered up the town, and his army as prisoners of war, without so much as firing a shot!

ULSTER, one of the provinces into which Ireland is divided, and the most northerly, comprising the counties of Donegal, Londonderry, Antrim, Tyrone, Fermanagh, Monaghan, Armagh, Down, and Cavan.

ULSTER, county, N. Y. Situated toward the S.E. part of the state, and contains 1096 sq. m. The Shawangunk and Catskill mountains cover a considerable portion of its surface. Watered by Rondout, Esopus, and Shawangunk creeks, which afford good water-power. The Delaware and Hudson canal passes in a N.E. direction, through the county, and terminates at Eddyville, on Rondout creek, 3 m. from Hudson river. Water limestone is found in large quantities on Rondout creek. It contained in 1840, 38,459 neat cattle, 50,840 sheep, 46,228 swine; and produced 57,877 bushels of wheat, 168,809 of rye, 161,805 of Indian corn, 108,087 of buckwheat, 223,133 of oats, 264,698 of potatoes, 28,945 pounds of sugar. It had four commission houses in foreign trade, 146 retail stores, 21 lumber-yards, one furnace, 12 forges, eight fulling-mills, 11 woollen factories, one cotton factory, with 2136 spindles, two flouring-mills, 42 grist-mills, 130 saw-mills, two paper-mills, one powder-mill, two glass factories, 33 tanneries, two potteries, three printing-offices, three weekly newspapers; one academy, 35 students; 165 schools, 8880 scholars. Pop. 45,822. Capital, Kingston.

ULVERSTONE, a market town and par. of England, hund. Furness, co. Lancaster, about 2 m. from the W. side of the embouchure of the Leven in Morecambe bay, on a tract apparently abandoned by the sea. 14 m. N.W. Lancaster. Area of par., 29,100 acres. Pop., in 1831, 7741. Of late years the town has greatly improved: It has now a neat theatre, two subscription libraries, news and assembly-rooms, &c.; and, besides the parish church, Trinity church has been erected within these few years. The livings of both are perpetual curacies, in the gift of — Braddyll, Esq.; that of the parish is worth £149, and that of Trinity church £143 a year. The parish church is a handsome modern structure, in the style that prevailed in the time of Henry VIII., with a good altar-piece of the Descent from the Cross, and an E. window of stained glass. There are also meeting houses for Dissenters, and some public schools of a minor kind. In 1795 a canal was cut from the river Leven, by which vessels of 400 tons reach a large basin, and load or unload close to the town. The inhabitants principally manufacture cotton goods, canvass hats, &c., and are occupied in conveying coastwise copper and iron ore, limestone, corn, and slates; the latter being exported in large quantities. Ulverstone belongs to the port of Lancaster. It is the seat of petty sessions for the hundred, manorial courts for the recovery of debts under 40s., &c.

ULYSSES, L., Tompkins co., N. Y., 8 m. N.W. Ithaca.

## UNION.

Bounded E. by Cayuga lake, and drained by its tributaries. Halsey creek has falls of 306 feet in the course of a mile, and a single cascade is 216 feet high, and sometimes 60 feet wide and 2 feet thick, affording great water-power. It contains three churches, a Presbyterian, Methodist, and Baptist, 15 stores, one fulling-mill, three saw-mills, two tanneries, one distillery; 14 schools, 895 scholars. Pop. 2976.

UMBAGOG, lake, is a beautiful sheet of water, on the boundary between N. H. and Me., 18 m. long, and 10 m. wide at its greatest width. Its outlet constitutes a considerable branch of Androscoggin river.

UNADILLA, p. t., Otsego co., N. Y., 94 m. W. by S. Albany, 334 W. Drained by Unadilla and Susquehanna rivers. It contains an Episcopal church, six stores, one fulling-mill, two grist-mills, two saw-mills; 11 schools, 426 scholars. Pop. 2372.

UNDERHILL, p. t., Chittenden co., Vt., 15 m. N.E. Burlington, 56 m. N.W. Montpelier, 532 W. Chartered in 1763, first settled in 1766. Watered by head branches of Brown's river. It contains two churches, a Congregational and Methodist, two stores, 10 saw-mills; eight schools, 370 scholars. Pop. 1441.

UNION, county, Pa. Situated near the centre of the state, and contains 520 sq. m. Bounded E. by Susquehanna river and its W. branch. Drained by Penn's, Buffalo, White, Deer, Middle and West Mahantago creeks. It contained in 1840, 14,605 neat cattle, 18,196 sheep, 16,578 swine; and produced 310,010 bushels of wheat, 135,387 of rye, 172,191 of Indian corn, 24,461 of buckwheat, 263,501 of oats, 107,570 of potatoes, 8000 pounds of tobacco. It had 51 stores, 13 fulling-mills, one woollen factory, two furnaces, one bloomery, 13 flouring-mills, 32 grist-mills, 75 saw-mills, six oil-mills, 24 tanneries, 18 distilleries, two breweries, eight potteries, six printing-offices, one weekly newspaper; two academies, 45 students; 49 schools, 2540 scholars. Pop. 22,787. Capital, New Berlin.

UNION, district, S. C. Situated in the N. toward the W. part of the state, and contains 340 sq. m. Bounded N.E. by Broad river, S.W. by Ennore river. Drained by Tiger and Packer river rivers and their branches. It contained in 1840, 17,063 neat cattle, 7335 sheep, 32,215 swine; and produced 61,661 bushels of wheat, 1578 of rye, 757,319 of Indian corn, 63,405 of oats, 23,930 of potatoes, 1,612,524 pounds of cotton. It had 25 stores, two smelting houses, producing gold to the amount of \$9375, five flouring-mills, 20 grist-mills, 12 saw-mills, seven tanneries, 15 distilleries; six academies, 240 students; 32 schools, 738 scholars. Pop.: whites, 10,485; slaves, 8354; free coloured, 97; total, 18,936. Capital, Unionville.

UNION, county, Ga. Situated in the N. part of the state, and contains 600 sq. m. Drained by Hiwassee river and its branches. It contained in 1840, 3051 neat cattle, 2523 sheep, 11,235 swine; and produced 7343 bushels of wheat, 2071 of rye, 129,340 of Indian corn, 8005 of oats, 8788 of potatoes, 6022 pounds of tobacco. It had two stores, 15 grist-mills, six saw-mills, one tannery, nine distilleries. Pop.: whites, 3065; slaves, 87; total, 3152. Capital, Blairsville.

UNION, parish, La. Situated in the N. part of the state, and contains 1200 sq. m. Bounded E. by Washita river, and drained by its tributaries. It had in 1840, 38 schools, 100 scholars. Pop.: whites, 1273; slaves, 563; free coloured, 2; total, 1838. Capital, Farmersville.

UNION, county, Ky. Situated in the N.W. part of the state, and contains 450 sq. m. Bounded N. and W. by Ohio river, S. by Tradewater creek. It contained in 1840, 2059 neat cattle, 6302 sheep, 26,209 swine; and produced 33,624 bushels of wheat, 2004 of rye, 495,595 of Indian corn, 53,441 of oats, 8388 of potatoes, 612,158 pounds of tobacco, 6156 of cotton. It had 28 stores, one woollen factory, two flouring-mills, 27 grist-mills, five saw-mills, one oil-mill, eight tanneries, one distillery; one academy, 60 students; five schools, 117 scholars. Pop.: whites, 4009; slaves, 1728; free coloured, 36; total, 6673. Capital, Morganfield.

UNION, county, O. Situated a little N.W. of the centre of the state, and contains 450 sq. m. Drained by Darby's creek, Mill creek, and other branches of Scioto river. It contained in 1840, 9677 neat cattle, 9349 sheep, 14,844 swine; and produced 57,972 bushels of wheat, 2911 of rye, 289,607 of Indian corn, 2366 of buckwheat, 79,680 of oats, 18,932 of potatoes, 6361 pounds of tobacco, 759,130 of sugar. It had 20 stores, one fulling-mill, one flouring-mill, five grist-mills, six saw-mills, four tanneries, two distilleries; 55 schools, 1738 scholars. Pop. 8422. Capital, Marysville.

UNION, county, Ia. Situated in the E. toward the S. par. of the state, and contains 224 sq. m. Drained by the E. fork of Whitewater river and its branches. It contained in 1840, 7945 neat cattle, 14,169 sheep, 32,271 swine; and produced 80,890 bushels of wheat, 3052 of rye, 512,340 of Indian corn, 136,027 of oats, 9312 of potatoes, 61,364 pounds of sugar. It had 20 stores, five fulling-mills, two woollen factories, one cotton factory, with 125 spindles, six flouring-mills, 12 grist-mills, 21 saw-mills, three oil-mills, six tan-

## UNION.

neries, 10 distilleries; 19 schools, 646 scholars. Pop. 8017. Capital, Liberty.

Union, county, Ill. Situated toward the S. part of the state, and contains 380 sq. m. Bounded W. by Mississippi river. Drained by Clear creek and its branches. It contained in 1840, 6620 neat cattle, 4769 sheep, 23,268 swine; and produced 26,898 bushels of wheat, 310,559 of Indian corn, 52,913 of oats, 13,708 of potatoes, 3002 pounds of tobacco, 7464 of sugar. It had 15 stores, one flouring-mill, 20 grist-mills, three saw-mills, three tanneries, 15 distilleries, one pottery; one academy, 30 students; 12 schools, 387 scholars. Pop. 5524. Capital, Jonesboro'.

Union, county, Ark. Situated in the S. part of the state, and contains 2600 sq. m. Drained by Washita river and its branches. It contained in 1840, 6295 neat cattle, 789 sheep, 9099 swine; and produced 1093 bushels of wheat, 111,365 of Indian corn, 1765 of oats, 10,021 of potatoes, 404,599 pounds of cotton. It had six stores, 20 grist-mills, two saw-mills; four schools, 64 scholars. Pop.: whites, 1981; slaves, 906; free coloured, 2; total, 2889. Capital, Union C.H.

Union, p. t., Lincoln co., Me., 31 m. S.E. Augusta, 616 W. Drained by St. George and Muscongus rivers. Incorporated in 1786. It has six stores, three fulling-mills, four grist-mills, eight saw-mills, one paper-mill; 13 schools, 722 scholars. Pop. 1784.

Union, p. t., Broome co., N. Y., 146 m. W.S.W. Albany, 288 W. Bounded S. by Susquehanna river. Drained by Nanticoke river and other tributaries of Susquehanna river. It has six stores, one fulling-mill, three grist-mills, 28 saw-mills, two tanneries; one academy, 65 students; 23 schools, 981 scholars. Pop. 3165.

Union, p. t., Essex co., N. J., 6 m. S.W. Newark, 48 m. N.E. Trenton, 214 W. Watered by Elizabeth and Rahway rivers. It contains a Presbyterian church, two stores, two grist-mills, four saw-mills; one academy, 18 students; five schools, 183 scholars. Pop. 1482.

Union, t., Berks co., Pa. Bounded N.E. by Schuylkill river. It has four stores, one furnace, two forges, one flouring-mill, two grist-mills, two saw-mills. Population, 1272.

Union, t., Luzerne co., Pa. Bounded S.E. by the N. branch of Susquehanna river, and drained by its tributaries. The North Branch canal passes through it. It has two stores, two grist-mills, five saw-mills; eight schools, 285 scholars. Pop. 1242.

Union, t., Fayette co., Pa. Drained by Redstone creek. It abounds with iron ore, and has two stores, one furnace, seven grist-mills, 14 saw-mills, two tanneries, one distillery; nine scholars, 405 scholars. Pop. 2723.

Union, p. v., capital of Monroe co., Va., 229 m. W. Richmond, 266 W. It contains a courthouse, jail, a Presbyterian and a Methodist church, four stores, two tanneries, and about 600 inhabitants.

Union, t., Belmont co., O. Drained by Stillwater creek. The National road passes through it from E. to W. It has five schools, 134 scholars. Pop. 2126.

Union, t., Brown co., O. Bounded S.W. by Ohio river. Drained by Red Oak and Eagle creeks. It has one college, 22 students; one academy, 45 students; four schools, 190 scholars. Pop. 3316.

Union, t., Butler co., O. It has three schools, 98 scholars. Pop. 1828.

Union, t., Clermont co., O. It has three stores, one flouring-mill, one saw-mill; three schools, 115 scholars. Pop. 1423.

Union, t., Clinton co., O. It has eight stores, one fulling-mill, two woollen factories, one flouring-mill, three grist-mills, six saw-mills, one oil-mill, two printing-offices, two weekly newspapers; 15 schools, 1218 scholars. Pop. 3284. It contains Williamsburg village on Little Miami river, the former capital of the county.

Union, t., Fayette co., O. It contains Washington village. It has 11 stores, one flouring-mill, one grist-mill, two saw-mills, two printing-offices, one weekly newspaper; 13 schools, 400 scholars. Pop. 1945.

Union, t., Miami co., O. It has seven schools, 397 scholars. Pop. 1967.

Union, t., Muskingum co., O. It has four churches; one college, 40 students; two schools, 58 scholars. Pop. 1625.

Union, t., Warren co., O. It contains Deerfield village, and has seven schools, 435 scholars. Pop. 1617.

Union, t., Shelby co., Ia. It has four grist-mills, three saw-mills, six distilleries. Pop. 1550.

Union, t., Montgomery co., Ia. It has four schools, 90 scholars. Pop. 2943.

Union, p. v., capital of Franklin co., Mo., 73 m. E. Jefferson city, 863 W. Situated on a branch of Marmec river, 7 m. S. Missouri river. It contains a courthouse, jail, four stores, and about 200 inhabitants.

Union, p. v., capital of Union co., Ark., 206 m. S. Little Rock, 1251 W. Situated on the S.W. side of Wachita

## UNITED STATES.

river, and contains a courthouse, jail, several stores, and about 100 dwellings.

UNION TOWN, p. b., capital of Fayette co., Pa., 179 m. W. by S. Harrisburg, 195 W. Situated on Redstone creek. It contains a courthouse, jail, six churches, a Presbyterian, Episcopal, Methodist Episcopal, Methodist Protestant, Baptist, and an African Methodist, Madison college founded by the Methodists in 1825, chartered in 1827, 23 stores, one furnace, two grist-mills, three saw-mills, three tanneries, one distillery, one pottery, three printing-offices, three weekly newspapers, and two periodicals; one college, 119 students; five schools, 350 scholars. Pop. 1710.

UNIONVALE, t., Dutchess co., N. Y., 12 m. E. Poughkeepsie, 85 m. S. Albany. Drained by branches of Fishkill creek. It contains a Methodist church, six stores, one cotton factory, with 544 spindles, one flouring-mill, two grist-mills, two saw-mills; seven schools, 259 scholars. Pop. 1498.

UNION VILLAGE, v., Warren co., O., 4 m. W. Lebanon. It has been built and is inhabited by *Shakers*, who have a large church in the centre. It consists of six families, the largest of which contains 100 persons, each with an extensive house, surrounded by out-houses and workshops, and delightful gardens under fine cultivation, with excellent orchards, and the best breeds of domestic animals. They exhibit great neatness and skill in their mechanical productions.

UNITED STATES (THE) of America occupy the middle division of North America, constitute the most celebrated republic in the world, and rank among the nations of the earth immediately after the great powers of Europe. It lies between 25° and 54° N. lat., and between 67° and 125° W. long. Its greatest length is 3000 m., and its greatest breadth is 1700 m.; containing about 2,300,000 sq. m. It has a frontier of about 10,000 m.; a seacoast of 3600 m.; and a lake coast of 1200 m. It is bounded N. by British or Russian America. Beyond the Rocky mountains the boundary is not settled between the United States and Great Britain, but is expected to be adjusted by a pending negotiation. It is bounded E. by New-Brunswick and the Atlantic ocean; S. by the gulf of Mexico, Texas and Mexico; and W. by the Pacific ocean. The population in 1790, was 3,929,328; in 1800, 5,309,758; in 1810, 7,239,903; in 1820, 9,638,166; in 1830, 12,856,165; in 1840, 17,062,666; of whom 2,487,113 were slaves. Employed in agriculture, 3,717,756; in commerce, 117,575; in manufactures and trades, 791,545; in navigating the ocean, 56,025; in navigating rivers, lakes, canals, &c., 33,067; in mining, 15,203; in the learned professions, 65,236.

The territory of the United States is divided into 26 states, and three territories, each of which has a separate government, and the District of Columbia, which is under the immediate jurisdiction of the United States Congress. The following is a list of the states, which are divided into the *Northern* or *Eastern*, the *Middle*, the *Southern*, and the *Western* states, with their population in 1840.

\* The last three will probably be soon admitted into the Union.

Washington, on the Potomac river, in the District of Columbia, is the seat of government of the United States, having become such in the year 1800.

The country is intersected by two principal ranges of mountains, the Alleghany and the Rocky mountains. The Alleghany mountains in the E. run nearly parallel with the Atlantic coast, from Georgia, through Tennessee, Virginia, and Pennsylvania to New-York. The Rocky mountains in the W. run across the territory nearly parallel with the coast of the Pacific ocean, at the distance from it of several hundred miles. The Alleghany mountains run in separate, and somewhat parallel ridges, with a breadth of from 60 to 120 m., and at a distance from the sea-coast of from 80 to 250 m., and terminate in the Catskill mountains E. of Hudson river, though some would extend them to the White mountains in New-Hampshire. The general height

# UNITED STATES.

of the Alleghany mountains is nowhere above 2000 or 3000 feet above the level of the ocean, and not more than one half of that above the adjacent country. The highest peak in this range is Black mountain, in the W. part of North Carolina, which is 6476 feet high. Round Top, the highest peak in the Catskill mountains, is 3804 feet. The Rocky mountains may be regarded as a part of the great chain of the Cordilleras, and extend from Mexico to the 70° N. lat., running at an average distance of 600 m. from the Pacific ocean, with a general height of about 8000 or 9000 feet above the level of the sea, but not more than 5000 feet above the level of their base. Some of their elevated peaks rise to the height of 10,000 or 12,000 feet high. The Green mountains, a minor range, commence near New-Haven, Connecticut, and run through that state, Massachusetts and Vermont to the borders of Canada. Mansfield mountain, the highest peak in the chain, in a township of the same name in Vermont, is 4280 feet high. The White mountains in New-Hampshire are very elevated, the highest peak, mount Washington, is 6428 feet high. West of lake Champlain, in the state of New-York, are the Adirondack mountains, the highest peak of which, mount Marcy, is 5460 feet high.

West of the Rocky mountains the rivers generally flow W. to the Pacific, the principal of which is the Columbia. The rivers between the Alleghany and Rocky mountains are the Mississippi and its numerous tributaries, which flow into the gulf of Mexico, with the exception of a few of the smaller class which flow into the northern lakes. East of the Alleghany mountains the rivers flow into the Atlantic. The following are the principal rivers which flow into the Atlantic, with about their length in miles, Penobscot, 250; Kennebec, 200; Androscoggin, 170; Saco, 160; Merrimac, 290; Connecticut, 410; Hudson, 324; Delaware, 300; Susquehanna, 450; Potomac, 500; James, 500; Roanoke, 400; Cape Fear, 350; Pedee, 450; Santee, 450; Savannah, 500; Altamaha, 400; St. Johns, 300. The following rivers flow into the gulf of Mexico: Appalachicola, 500; Alabama, 600; Tombigbee, 450; Mississippi, 3000. The following are tributaries of the Mississippi, Red, 1500; Arkansas, 2150; White, 1200; Missouri, before its junction, 3180; Kansas, 1100; Platte, 350; Osage, 500; Yellowstone, 1100; Ohio, 1250; Illinois, 500; Des Moines, 800; Tennessee, 900; Cumberland, 600; Wabash, 500. The following rivers are W. of the Rocky mountains: Columbia, 1500; Multnomah, 900; Lewis's, 900; Clark's, 600. The above mostly include their remote sources. The two largest lakes that lie wholly in the United States are Michigan, 330 m. long and 60 m. broad, and Champlain, 120 m. long and 15 m. broad. But the great lakes Superior, 380 m. long and 130 m. broad; Huron, 240 by 150 m.; Erie, 240 by 60 m.; and Ontario, 190 by 55 m., are one half in the United States and the boundary between the United States and Canada passing through the middle of them. The gulf of Mexico on the S. of the United States, is a large branch of the Atlantic ocean, and receives the waters of the Mississippi valley. The principal bays are the Chesapeake, Delaware, Massachusetts and Penobscot. The principal capes are Ann, Cod, May, Hopen, Charles, Henry, Hatteras, Lookout, Fear, Florida and Sable.

The soil of New-England is generally rocky and rough, better adapted to grazing than to grain. The valley of the

Connecticut, and some parts of Maine are exceptions to this remark. The low country on the Atlantic coast is generally light and sandy, not very fertile excepting on the margins of the rivers. The hilly country back of this is generally fertile. The soil generally in the valley of the Mississippi has great fertility. But toward the Rocky mountains it becomes sterile. The country beyond the Rocky mountains, with some exceptions, is but moderately fertile.

Beef, pork, butter, and cheese are the principal productions of the eastern states, though a great amount of wool is raised, and various grains for home consumption. Wheat is the staple of the middle states. In the northern portion of the southern states, wheat and tobacco are chiefly cultivated; and in the low country at the south, cotton, rice, and sugar are extensively raised. The western states are the granary of the United States, and indeed of the world, and it is scarcely possible to set bounds to the bread stuffs which they are capable of producing.

Among the mineral treasures of the United States, iron ore, coal and limestone are very extensive. The anthracite coal of Pennsylvania is inexhaustible, and the bituminous coal farther west is equally abundant. The lead region of Missouri, Illinois, Wisconsin, and Iowa, is probably the finest in the world. Gold is found to a considerable extent in Virginia, North Carolina, and Georgia, and marble and gypsum very abundant.

The climate of the United States has great variety, extending as it does through more than 20 degrees of latitude, with a great variety in the elevation of its surface. In the northern part it is subject to great extremes of heat and cold, but is generally healthy. The Atlantic coast S. of New-Jersey and the borders of the gulf of Mexico, have an unhealthy climate from July to November. Back from the sea-coast, the elevated country is generally healthy, as are the western states, with the exception of some low and marshy portions.

The principal harbours of the United States proceeding from the N. to the S. are Portland, Portsmouth, Boston, Newport, New-London, New-York, Philadelphia, Baltimore, Norfolk, Charleston, Savannah, Mobile, and New-Orleans. Some of these harbours are unsurpassed in the world. The following are the most populous cities and towns in the United States, with their number of inhabitants in 1840: New-York, 312,710; Philadelphia, 228,691; Baltimore, 102,313; New-Orleans, 102,193; Boston, 93,383; Cincinnati, 46,338; Brooklyn, 36,233; Albany, 33,721; Charleston, 29,261 (see Charleston); Washington, 23,364; Providence, 23,171; Louisville, 21,210; Pittsburg, 21,115; Lowell, 20,796; Rochester, 20,191; Richmond, 20,153; Troy, 19,234; Buffalo, 18,213; Newark, 17,290; St. Louis, 16,469; Portland, 15,218; Salem, 15,082.

In its commerce, the United States is the second country on the globe, being inferior only to Great Britain. In 1840, the capital invested in foreign trade by importing and commission merchants was \$119,295,367; in domestic retail dry goods and other stores, \$250,301,799: in the fisheries, \$16,429,620. The registered tonnage of the United States for the year ending September 30th, 1842, was 975,358; the enrolled and licensed tonnage was 1,045,753; and of fishing vessels was 71,278; making a total of 2,092,390. Of the registered and enrolled tonnage there were employed in the whale fishery 151,612.

STATEMENT of the Commerce of each State and Territory, commencing on the 1st October, 1841, and ending on the 30th September, 1842.

The United States are chiefly an agricultural people, to which they are led by the extent of their territory, and the fertility of the soil; and the agricultural resources of the nation are becoming yearly more and more developed. The following agricultural statistics are derived from the census of the United States for 1840. There were 4,335,699 horses and mules; 14,971,586 neat cattle; 19,311,374 sheep; 26,301,293 swine; poultry was raised to the value of \$9,344,410. There were produced 84,823,272 bushels of wheat; 7,291,743 of buckwheat; 377,531,875 of Indian corn; 18,645,567 of rye; 4,161,504 of barley; 123,071,341 of oats; 108,298,060 of potatoes; 35,802,114 pounds of wool; 219,163,319 of tobacco; 80,841,422 of rice; 790,479,275 of cotton; 155,100,809 of sugar; 1,238,502 of hops; 628,303 of wax; 61,552 of silk cocoons; 10,248,108 tons of hay; 95,251 of hemp and flax. There were about 294 bushels of edible grains, exclusive of potatoes, to every individual of its population. The products of the dairy were valued at \$33,787,008; of the orchard at \$7,256,904; of lumber at \$12,943,507. And there were also made 124,734 gallons of wine.

The manufactures of the United States, though not equal to its agriculture and commerce, and of recent origin, have already risen to great respectability. A large amount of capital has been invested in them, machinery has been extensively introduced, and they supply a great amount of articles for home consumption, and already, considerable for exportation. No country in the world can compete with the United States in the article of coarse cotton goods, neither as to quality nor price. Cottons which in 1812 were worth two shillings a yard, can now be bought of a better quality for sixpence. And even in the finer quality of goods, great advancement has been made. It is only since the peace of 1815 that manufactures have made great progress; though they were commenced in Rhode Island many years before, and had made some progress. It was the policy of the British government before the revolution

to discourage American manufactures, and thus to keep the country in a state of great dependence. But that time has gone by; and should events ever cut off a supply of British manufactures, the country would be able to do without them. Unless Great Britain and other countries shall consent in a fair way, to receive American bread-stuffs in exchange for their manufactures, the Americans will be compelled to become their own manufacturers, and they will thus secure their substantial independence. Home-made or family goods were produced in 1840, to the amount of \$29,023,360. There were 1240 cotton factories with 2,224,631 spindles, which employed 72,119 persons, produced articles to the amount of \$46,350,453, with a capital of 51,102,359. Woollen manufactures employed 21,342 persons, producing goods to the amount of \$20,696,999, with a capital of \$15,765,124; paper-mills employed a capital of \$4,745,239; hats and caps were manufactured to the amount of \$3,704,342, and straw bonnets to the amount of \$1,476,505; 20,018 persons were employed in tanneries, with a capital of \$15,650,929; saddleries, and other manufactures of leather, employed a capital of \$12,881,262; carriages and wagons employed 21,994 persons, and produced to the amount of \$10,897,887, with a capital of \$5,551,632; mills of various kinds employed 60,788 persons, produced to the amount of \$76,545,246, with a capital of \$65,858,470; vessels were built to the amount of \$7,016,094; furniture was made by 18,003 persons, and employed a capital of \$6,989,971. There were 1552 printing-offices, 447 binderies, 138 daily, 125 semi-weekly or tri-weekly, and 1141 weekly newspapers, and 227 periodicals, the whole employing 11,523 persons, and a capital of \$5,873,815. Iron manufactures employed a capital of \$20,432,131; glass manufactures employed a capital of \$2,084,100, producing articles to the amount of \$2,890,293. The anthracite coal employed a capital of \$4,355,602; bituminous coal a capital of \$1,868,862; and lead a capital of \$1,346,756. The total amount of capital employed in manufactures, was \$267,726,579. For a more

# UNITED STATES.

particular account of the manufactures, see the articles on the respective states.

The revenue of the United States has arisen chiefly from customs on imports and from the sale of the public lands. The government has rarely found it necessary to resort to direct taxation. By these means, the national government was enabled, Jan. 1st, 1837, not only to complete the payment of the public debt contracted during two wars with Great Britain; but after reserving \$5,000,000, they were able to distribute to the states the sum of \$37,468,859, which by an act of June 23d, 1836, was deposited with them according to the number of their electoral votes, liable to be recalled in case of necessity, but which will probably never be recalled. The great expense of the late Indian war in Florida, and the diminution of the customs arising from the stagnation of trade, have caused the expenses of the government to exceed the revenue; so that a small debt has been contracted, amounting on December 1st, 1842, to \$20,596,355.

The public lands have recently been a great source of revenue. These lands have been ceded to the United States by the new states, or have been derived from the purchase of Louisiana in 1803, and of Florida in 1819. They are considered as belonging to the native tribes of Indians who inhabit them, until the title has been regularly extinguished by purchase and by treaty. When this is done, they are surveyed, and sold at a dollar 25 cents the acre, as the lowest price. This source of revenue is much less considerable than formerly. In 1836, it amounted to the large sum of \$25,167,000, but it has now diminished to less than \$5,000,000 annually. The law for the distribution of the proceeds among the states, has been repealed. The revenue of the United States for the year ending December 15th, 1842, amounted, with a small balance in the treasury at the commencement of the year, to \$34,733,077; and the expenditure to \$35,308,634, leaving a deficiency in the treasury on the 31st of December, 1842, of \$575,557. The United States have 272,646,356 acres of public land surveyed and unsold, and much more which is not surveyed.

The mint of the United States was established at Philadelphia in 1793; and in 1838 branches were established at Charlotte, N. C., at Dahlonega, Ga., and at New-Orleans, La. At the mint in Philadelphia, the whole coinage from the commencement amounted to 255,087,171 pieces, with a value of \$35,873,052; at the branch of Charlotte, 162,118 pieces, with a value of \$666,030; at the branch of Dahlonega, 178,534 pieces, with a value of \$227,638; at the

branch of New-Orleans, 14,179,656 pieces, with a value of \$3,155,443; making a total of 269,807,479 pieces, with a total value of \$90,522,163.

In June 30th, 1843, there were 13,814 postoffices in the United States; the amount of transportation during the previous year was 35,252,805 miles, at a cost of \$2,976,284. The total expenditures for the service of the year ending at that time was \$4,374,713; the gross amount of the revenue for the year was 4,295,925.

STATEMENT OF THE Revenue and Expenditure of the Post-office Department for the fourteen years ending the 30th of June, 1842.

Year ending	Revenue.	Expenditure.
	<i>Dollars.</i>	<i>Dollars.</i>

The U. States have navy yards at the following places: Portsmouth, Boston, New-York or Brooklyn, Philadelphia, Washington, Norfolk, and Pensacola. In July, 1843, there were 67 captains; 94 commanders; 324 lieutenants; 69 surgeons; 9 passed assistant surgeons; 60 assistant surgeons; 64 pursers; 23 chaplains; 133 passed midshipmen; 410 midshipmen; 31 masters; 7 master's mates; 23 profes-

sors of mathematics; 3 teachers of naval schools; 37 boatswains; 40 gunners; 38 carpenters; 35 sailmakers. Of the marine corps, there were 1 colonel commanding; 1 lieutenant colonel; 4 majors; 13 captains; 20 lieutenants; and 30 second lieutenants. The pay of the officers of the navy is greater than that of a similar grade in the land forces.

The navy of the United States is the most efficient for its

# UNITED STATES.

size of any in the world. In July, 1843, it contained the following ships and other vessels of war, with the number of guns attached,

\* Faikhan Guns.

The constitution of the United States forbids the establishment of religion by law: but every person who does not

interrupt the peace of society, is protected in the free exercise of his religion. The voluntary principle, as it is sometimes called, has been found to be more efficient than any legal enactment for the support of religious institutions. The union of church and state is generally regarded with aversion by the people, as that which is calculated to corrupt religion, and to afford no benefit to the state; while no people are more deeply sensible of the fact, that the stability, and even the existence, of a free government depends upon the prosperity of religious institutions, and their moral influence upon the principles and habits of the people. This is the great secret of the success of the American experiment, which has presented an example of a free government that has furnished great encouragement to the friends of freedom throughout the world, and already exerts a salutary influence on every civilized nation of the earth. The puritan fathers of New-England came to this country to found a religious and intelligent community, they planted the church and the schoolhouse side by side, and the influence of their character, and the principles and habits which they formed and cherished, are now felt to the remotest ends of the nation, and form the surest basis for political and religious freedom. In accordance with the errors of the age in which they lived, they entertained some narrow and bigoted notions, which the advancing light of civilization, and a more correct estimate of things have removed from the minds of their descendants; but they had noble redeeming qualities, and it is among the encouraging signs of the times, that their memory is held in increasing veneration. It is estimated by Dr. Baird in his "Religion of America," a work which deserves to be attentively read by every citizen and every foreigner who wishes to understand the religious, and even political condition of the United States, that the amount raised by the Evangelical churches for the support of the ministry, amounts to the sum of \$5,500,000 annually, and that there is on an average, one evangelical Protestant minister to rather less than 1135 souls; and if we were to add the Roman Catholics, Unitarians, Universalists, and other preachers of that class, one preacher to every 800 souls. Thus it appears that the voluntary principle in the United States is exceedingly efficient in the support of religious institutions.

ACCOUNT of the Churches or Congregations, Ministers, Communicants, &c., belonging to the principal Religious Bodies in 1842.

Denominations.	Churches or Congregations.	Ministers.	Members or Communicants.	Population.
Baptists	7,898	6,741	573,702	5,000,000
— Freewill	981	647	47,217

Universalists	653	317		600,000

The people of the United States, from the first settlement of the country, have been very attentive to the cause of popular education, and this cause is continually gaining a stronger hold on the community. It is recommended by all the governors of the states in their annual messages to their respective legislatures. Most of the older states have respectable funds devoted to the support of common schools, and in the new states the general government have provided funds for the support of schools, by setting apart one 36th section in each township, containing each 1 sq. m., for the purposes of common education. The amount of land already set apart for educational purposes E. of the Mississippi is computed to amount to 8,000,000 of acres. The same spirit is also extending W. of the Mississippi, and has penetrated even to the Indian tribes; and the Choctaw nation has applied \$18,000 per annum out of the moneys which

they receive from the United States to the support of schools. Knowledge and virtue are regarded as the main pillars of the republic. In less than 20 years from the landing of the pilgrims on the rock of Plymouth, Cambridge college was founded, and numerous similar institutions (perhaps too many) have been successively established from that day to the present time. The following are among the principal colleges and universities in the country, with the date of their establishment: Cambridge college, now Harvard university, in 1638; Yale college, at New-Haven, in 1700; Nassau-hall, or the college of New-Jersey, at Princeton, in 1746; Brown university, at Providence, in 1764; Dartmouth college, at Hanover, New-Hampshire, in 1769; the university of North Carolina, at Chapel Hill, in 1789; Bowdoin college, at Brunswick, Maine, in 1794; and among the more recent institutions, the university of Nashville, Tennessee,

## UNITED STATES.

In 1806; the university of Virginia, at Charlottesville, in 1819; Amherst college, at Amherst, Massachusetts, in 1821; and many others. Perhaps if fewer institutions had been chartered, and they had been more liberally endowed, the beneficial results would have been greater, though the number educated would probably have been less.

According to the census of 1840, there were in the United States 173 colleges or universities, with 16,233 students; 3342 academies, with 164,159 students; 47,909 common and primary schools, with 1,845,244 scholars. In the above enumeration, theological and medical institutions, where they are separate from colleges, are ranked among universities and colleges. In the academies, the ancient and modern languages, grammar, history, logic, rhetoric, natural and moral philosophy, &c., are taught. The common schools are extensively provided with libraries, and appropriate apparatus for illustrating the sciences taught in them.

There are 38 theological seminaries, belonging to different denominations, designed to succeed a collegiate course, some of which are connected with colleges. The principal of them are the theological seminary at Andover, Massachusetts, Congregational; the theological seminary at Princeton, Presbyterian; the theological seminary at Auburn, Presbyterian; the theological seminary of the Episcopal church, New-York, Protestant Episcopal; the theological institution at Newtown, Massachusetts, Baptist; and the theological departments of Yale college and Harvard university.

There are eight law schools in different parts of the country. The earliest institution of this kind was founded in 1798 by the Hon. Tapping Reeve, and taught afterward by him in connexion with the Hon. James Gould, both judges of the supreme court of Connecticut. At this institution many of the principal civilians in the United States have been educated. It is now discontinued.

There are 28 medical schools, some of them connected with colleges. The principal are the medical departments of the university of Pennsylvania; of Harvard university; of Yale college; of Dartmouth college; of Transylvania university; of the university of Maryland at Baltimore; of the university of New-York; the college of surgeons and physicians, New-York; the Louisville medical institution; the Vermont academy of medicine at Castleton; the Berkshire medical school at Pittsfield, &c.

It is astonishing to reflect on the great works of internal improvement which have been recently undertaken and effected in the United States. Steamboats have rendered the great rivers, especially of the west, available for the purposes of commerce. More recently, canals and railroads have been constructed, and they have bound together the different parts of the confederacy by the strong ties of interest. The complete success of the Erie canal, one of the first and greatest works undertaken, has entirely silenced all opposition to the work, and proved a powerful stimulus to other works of the kind. (For an account of these works see the descriptions of the particular states.) With the true Anglo Saxon spirit, the United States are a great people for going ahead, and in works of acknowledged utility they will not ordinarily stop until they get against an insurmountable obstacle. During the ruinous credit system of 1836 and 1837 many splendid projects were formed for works beyond the present necessities and means of the country, and debts were contracted beyond the power of the states to discharge. If the plan had been to complete whatever was undertaken, and to commence no farther than could be completed, there would be nothing to regret. These works, so far as completed, have generally yielded a reasonable profit. To be whirled through the country by the aid of an iron horse, that knows no fatigue, at the rate of from 15 to 30 m. an hour, and with less personal fatigue in going 200 m. than would be involved in walking 3 m., is extremely pleasant; and to transport goods from New-York city to remote parts of Michigan, for instance, for a dollar for 100 pounds, is an immense advantage to trade. Individuals may at times, though not generally, have lost by these undertakings, but the country has been a great gainer. These works remain, with all their immense advantages, whatever may have been the result to those who projected and completed them. It is to be hoped that a blow has been given to the credit system from which it will not soon recover. The resources of the country are great, and it will at length recover from its embarrassments. To the disgrace of some of the states, the debts which have been contracted have been partially repudiated; but the doctrine is generally abhorred, and will not ultimately prevail. Foreign creditors, when they trust individual states, should recollect that they are not dealing with the general confederacy, who are not answerable for the debts of the states individually contracted, though it is believed that no state can maintain a respectable standing in the confederacy which does not ultimately and honestly pay its debts. Some great works which have been commenced are sure yet to be completed. The railroad

through Long Island, which, with connected railroads, will constitute the most direct and expeditious route from New-York to Boston, has recently been completed. The Erie railroad will eventually go through; it may be with a hard struggle. Some of the most important southern and western railroads are making progress amid all the embarrassments of the country, and their completion will add to the general prosperity. The banking system of the country is coming to a sounder state; and those banks which do not pay specie for their notes when presented have been extensively obliged to wind up their concerns. On the whole, the country is prosperous in its business, and going steadily forward in all its great interests; and whatever abuse or mismanagement may exist finds a corrective in public sentiment and controlling circumstances.

The government of the United States must appear extremely complicated to a foreigner accustomed to the unity of a monarchical government, and from this circumstance its operations are often not well understood. The whole country is subject to the national or general government, consisting of three branches, the executive, legislative, and judicial. The executive power is lodged in the hands of the president, who is appointed for four years, by electors chosen for that purpose by the people, generally by districts. Each state is allowed as many electors as it has members of Congress. These are chosen differently in different states; but if by districts, each district chooses one elector, for the sole purpose of electing a president and vice-president. The latter presides over the senate; and in case of the death of the president, he immediately occupies his place. In this case his office, otherwise almost nominal, becomes exceedingly important. The person who has a majority of all the votes is president; and if no one has such a majority, the house of representatives chooses a president from three candidates having the greatest number of votes. In the election of president the votes are given by states. The vice president is chosen at the same time and in the same manner. The president appoints the secretary of state, and the ministers of the various departments of the administration, as the treasury, navy, war, and the post-master-general, and, directly or indirectly, he appoints to all the offices in the national government; in the more important ones, with the advice and consent of the senate. The national legislature consists of a senate and house of representatives. The senate is composed of two persons from each state in the Union, and chosen by the legislatures of the states respectively for the term of six years. One third of the senate is chosen each year. The house of representatives consists of members chosen for two years by districts. The number of representatives is proportioned to the number of the inhabitants, and the ratio has been fixed at one for every 70,680 inhabitants, three fifths of the slaves being omitted in the enumeration. The house of representatives represents the people, the senate represents the states.

No person can be elected president who is less than 35 years of age, who is not a native born citizen of the United States, or was not a citizen at the time of the adoption of the constitution of the United States, and who has not been a resident in the United States for 14 years. He is the commander-in-chief of the army and navy, and of the militia when in the actual service of the United States. With the advice and consent of the senate, he makes treaties, appoints ambassadors, judges of the supreme court, and other officers of the national government, whose appointment is not otherwise provided for by the constitution. He takes care that the laws be executed, and commissions all officers. He has power to grant reprieves and pardons for all offences against the United States, except in case of impeachments. In making treaties, the concurrence of two-thirds of the senate is necessary.

A senator must be at least 35 years of age, and have been a citizen of the United States for nine years. It belongs to the senate to try all cases of impeachment of the president and vice-president.

A representative must be at least 25 years of age, and have been a citizen of the United States for seven years. Congress has power to lay and collect taxes; to provide for the common defence and general welfare; to borrow money; to regulate foreign and domestic commerce; to establish uniform laws of naturalization and bankruptcy; to coin money and regulate its value; to fix the standard of weights and measures; to establish postoffices and post-roads; to grant patent and copy rights; to constitute tribunals inferior to the supreme court; to define and punish piracies and offences on the high seas, and against the laws of nations; to declare war, and grant letters of marque and reprisal; make rules respecting captures; raise and support armies; provide and maintain a navy; provide for the calling out of the militia, to execute the laws of the Union, suppress insurrections, and repel invasions; and to exercise exclusive jurisdiction over the District of Columbia. No

## UNITED STATES.

member of Congress is allowed to hold any office under the government of the United States while he continues such. All bills for raising money must originate in the house of representatives.

The judicial power is vested in a supreme court, consisting at present of nine judges, appointed by the president, with the consent of the senate. They can be removed by impeachment before the senate, and they hold a yearly winter session in Washington, the capital of the United States. When not thus united, they hold circuit courts in different parts of the country. The whole country is divided, also, into districts, each having a judge appointed by the president, with the consent of the senate, for the decision of causes that fall within the cognizance of the United States' courts, and from whose decisions an appeal lies to the supreme court. This last court decides on the constitutionality of the laws passed by the national congress, and also by the several state legislatures, and on all questions between individual states, or between the United States and an individual state, and questions arising between a foreigner and either the United States or any other state. Although the supreme court have at times decided that the laws of particular states have been unconstitutional, and of course void, their decisions have never yet been permanently resisted. The judges hold their offices during good behaviour, and their salaries cannot be diminished during their continuance in office.

Each individual state has a government for the regulation of its local and internal concerns, consisting of a governor, senate, and house of representatives, to which are reserved all the powers not expressly granted by the constitution to the general government. Without this provision a republican government could not probably be maintained over a country so widely extended. The states, though bearing a close general resemblance, differ in many of the details of their constitutions, as in the term during which the governor holds office, and the extent of his power, the terms for which the senators and representatives are elected, and for which the judges of the several courts are appointed, their salaries, &c. The territory of all the states is divided into counties, having courts of justice attached to each, and officers for many local purposes, as maintaining the roads, providing for the poor, &c. In South Carolina and Louisiana, parishes answer to counties. In New-England, New-York, New-Jersey, Pennsylvania, and most of the states in the valley of the Mississippi, the counties are divided into townships, averaging 6 or 8 m. square, which form important civil districts and corporations: the inhabitants meet once a year or oftener for local purposes—the appointment of local officers and committees. In these primary assemblies the inhabitants acquire habits of transacting public business, fitting them for legislation and government in national and local affairs. In these assemblies the affairs of the American revolution were extensively discussed and matured, by which the cause of freedom was materially promoted. In Maryland, Virginia, the Carolinas, Kentucky, and Tennessee, the counties form the smallest territorial division. The larger towns are incorporated as cities and boroughs, which have municipal governments.

No country can hope successfully to maintain a government like that of the United States unless the inhabitants have been prepared and educated for freemen; and it is no slight preparation that is required. Without this, all attempts of the kind will be likely to result in anarchy or despotism.

The national existence of this country commenced July 4th, 1776, when the delegates from the states, in congress, assembled at Philadelphia, declared that "the United States are, and of right ought to be, free and independent;" but long and arduous was the struggle by which they made good the declaration. With a population of about 3,000,000, nothing but stout hearts, indomitable perseverance, and a devoted patriotism could have enabled them—unprovided with the means of carrying on a war with one of the most powerful nations of the earth—to conduct the contest to a successful issue. The world has never produced but one Washington. He learned the art of war in the best possible school, that of leading the colonial militia against the French, particularly at fort Du Quesne (now Pittsburgh), and displayed his youthful prowess in conducting the retreat of the shattered forces after the defeat of Braddock, which resulted from his neglect of the advice of Washington. The colonial militia were trained to the art of war in the protracted contest with the French in Canada, and the American officers often fought side by side with the British officers, to whom they were afterward opposed in mortal combat. The latter were well acquainted with the prowess of many of the officers of the revolution. A British officer once asked Gen Putnam, immediately before the commencement of the revolution, whether he did not think that 5000 veteran British forces were able to overrun the

country. The reply was characteristic. He said "that he would say nothing of the men, but the women would beat all their brains out with their ladders and broomsticks before they had got half through the country." It was happy that Washington was made commander-in-chief of the American forces. Without the prudence, skill, and courage of this American Fabius, the contest would not probably have been conducted to a successful issue. Washington refused all compensation for his arduous services in the revolutionary war, excepting his expenses, of which he kept an accurate account.

The following were the principal battles of the revolution, with the commanders, and loss on each side. The war commenced with the battle of *Lexington*, April 19th, 1775; the American loss 84, British loss 245. *Bunker hill*, June 17th, 1775; American (Prescott) loss 453, British (Howe) 1054. *Flatbusch*, August 12th, 1776; British (Howe) loss 400, American (Putnam and Sullivan) 2000. *White Plains*, October 28th, 1776; American (Washington) 300 or 400, British (Howe) 300 or 400. *Trenton*, December 25th, 1776; American (Washington) 9, British (Ruh) 1000. *Princeton*, January 3d, 1777; American (Washington) 100, British (Mawhood) 400. *Bennington*, August 16th, 1777; American (Stark) 100, British (Baum and Breyman) 600. *Brandywine*, September 11th, 1777; British (Howe) 500, American (Washington) 1200. *Stillwater*, October 17th, 1777; American (Gates) 350, British (Burgoyne) 600, 5753 men surrendered. *Monmouth*, June 25th, 1778; American (Washington) 230, British (Clinton) 400. *Rhode Island*, August 29th, 1778; American (Sullivan) 211, British (Pigott) 260. *Briar Creek*, March 30th, 1779; British (Prevost) 16, American (Ash) 300. *Stony Point*, July 15th, 1779; American (Wayne) 100, British (Johnson) 600. *Camden*, August 16th, 1780; British (Cornwallis) 375, American (Gates) 720. *Cowpens*, January 17th, 1781; American (Morgan) 72, British (Tarleton) 800. *Gulford Courthouse*, March 15th, 1781; American (Greene) 400, British (Cornwallis) 523. *Eutaw Springs*, September 8th, 1781; American (Greene) 555, British (Stewart) 1000. The war closed by the surrender, at Yorktown, of Cornwallis, October 19th, 1783, with 7073 British soldiers, to Washington. The whole amount of the expenses of the revolutionary war, estimated in specie, was \$135,193,703.

The following table will show what proportion of the war was borne by the several states, to which the population, in round numbers, in 1790 is subjoined.

States.	Continentials.	Militia.	Pop. in 1790.
New Hampshire . .	12,197	2,095	141,000
Massachusetts (including Maine) . .	67,907	15,165	475,000
Rhode Island . .	5,308	4,284	68,000
Connecticut . .	31,939	7,792	235,000
New-York . .	17,781	3,304	319,000
New-Jersey . .	10,726	6,055	173,000
Pennsylvania . .	25,678	7,357	431,000
Delaware . .	2,856	971	51,000
Maryland . .	15,912	4,127	216,100
Virginia . .	26,673	5,620	455,000
N. Carolina . .	7,263	.	283,000
S. Carolina . .	6,417	.	133,000
Georgia . .	2,679	.	58,000
Total . .	231,971	56,163	3,043,000

It thus appears that Massachusetts and Connecticut, in proportion to their population, bore the largest share of the war. Vermont, not then admitted to the Union, bore her full proportion.

Provisional articles of peace, acknowledging the independence of the United States, were signed in Paris, November 30th, 1782, by John Adams, Benjamin Franklin, John Jay, and Henry Laurens on the part of the United States, and Mr. Fitzherbert and Mr. Oswald on the part of Great Britain. The definitive treaty was signed September 30th, 1783. The confederation of the states, which in time of the war had given to the resolves of Congress the force of law, now that the danger was passed, evinced that it was inadequate to the purposes of an efficient government to meet the claims against the United States, and provide for the public debt, to raise a revenue, and to harmonize the jarring interests of the states. The difficulties which attended the formation of a new government, though different in kind, were not less than those of achieving independence. But by a happy concurrence of circumstances, a constitution was at length formed and ratified, which has secured the unexampled prosperity and happiness of the people, and stands as an illustrious proof of the wisdom of the fathers of the revolution, and a model for other nations in the pursuit of freedom. On the second Monday of May, 1787, delegates from the several states assembled at Philadelphia, for the purpose of forming a constitution for the United States, and George Washington, who had led the American army, was called to preside over them. On the 17th of September, after a debate of four months, a constitution was adopted, and sent to the several states for their approval. It was pro-

## UNITED STATES.

vided that the ratification of nine states should be sufficient for its establishment. It was warmly debated by the state conventions, but finally adopted by them all. (For the vote in the several states, see the particular articles on the states.) In several states amendments were recommended. The people were entering on an untried experiment, and they proceeded with extreme circumspection and caution. From the moment the proceedings of the general convention at Philadelphia transpired, the public mind was exceedingly agitated, and suspended between hope and fear, until nine states had ratified the plan of the federal government. Indeed the anxiety continued until Virginia and New-York had acceded to the system. But this did not prevent the demonstration of their joy on the accession of each state.

"On the ratification in Massachusetts, the citizens of Boston, in the elevation of their joy, formed a procession in honour of the happy event, which was novel, splendid, and magnificent. This example was afterward followed, and in some instances improved upon, in Baltimore, Charleston, Philadelphia, New-Haven, Portsmouth, and New-York, successively. Nothing could equal the beauty and grandeur of these exhibitions. A ship was mounted on wheels, and drawn through the streets; mechanics erected stages, and exhibited specimens of labour in their several occupations as they moved along the road; flags with emblems, descriptive of all the arts and of the federal union, were invented and displayed in honour of the government; multitudes in all ranks in life assembled to view the majestic scenes; while sobriety, joy, and harmony, marked the brilliant exhibitions by which the Americans celebrated the establishment of their empire." It was equal to a second declaration of independence.

The constitution was finally ratified by Congress, July 14th, 1788. On the first Wednesday of January, 1789, electors of president and vice-president were appointed. The electors met on the first Wednesday of February, 1789, and General George Washington, "first in war, first in peace, and first in the hearts of his countrymen," was unanimously chosen president, and John Adams was chosen vice-president. Gen. Washington was inaugurated as first president on the 30th of April, 1789, in the open gallery of the old Federal hall in New-York, where the Customhouse now stands; and never did a heartier shout proceed from the assembled multitude of freemen than that which greeted the conclusion of the ceremony with, "Long live George Washington." And now, after an experiment of more than 54 years, after having seen how completely this constitution secures all the purposes of a good government, and at how cheap a rate, the fear and trembling which marked its commencement are exchanged for steadfast confidence and unbounded hope; it stands like a lighthouse on the shore of the sea of liberty to direct the political voyager in his perilous course to the port of freedom. The authority and the boundaries of the several departments of the government are becoming daily better settled and understood, and it is striking a deeper root in the sentiments of the people. Every fourth of July gives increasing proof of the attachment of the citizens to their excellent form of government, and affords increasing evidence of its stability and perpetuity; and the citizen cannot be found who would be willing to exchange it for any other government on the earth.

The following is a list of the presidents of the United States.

George Washington, of Virginia,	from 1789 to 1797, 8 years.
John Adams, "Mass.,	" 1797 " 1801, 4 "
Thomas Jefferson, "Virginia,	" 1801 " 1809, 8 "
James Madison, "Virginia,	" 1809 " 1817, 8 "
James Monroe, "Virginia,	" 1817 " 1825, 8 "
John Quincy Adams, "Mass.,	" 1825 " 1829, 4 "
Andrew Jackson, "Tenn.,	" 1829 " 1837, 8 "
Martin Van Buren, "N. Y.,	" 1837 " 1841, 4 "
William H. Harrison, "Ohio,	{ died one month after his inauguration, 1841.
John Tyler, "Virginia,	{ as vice-president succeeded, 1841.

General Washington died suddenly at his residence at Mount Vernon, December 14th, 1799, of an inflammation of the throat, aged 68 years; and the nation everywhere mourned for him as for a father, with a sincere and profound grief. She had but one such man to lose. Funeral orations were delivered in every considerable place in the country; and the respect of the world has added its sanction to the nation's tears.

In 1803 Louisiana was purchased of the French for \$15,000,000; and Florida was ceded to the United States in 1821 by Spain, in compensation for spolations on American commerce, for \$5,000,000.

On the 4th of June, 1812, war was declared with Great Britain by the American Congress, by a vote in the House of Representatives of 79 to 49; and in the Senate by a vote

## UNTERWALDEN.

of 19 to 13. This war continued with varied success, until peace was concluded at Ghent, December 24th, 1814.

The original 13 states that adopted the constitution were New-Hampshire, Massachusetts, Rhode Island, Connecticut, New-York, New-Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia. To these, 13 new states have been added: Vermont in 1791, Kentucky in 1792, Tennessee in 1796, Ohio in 1802, Louisiana in 1812, Indiana in 1816, Mississippi in 1817, Illinois in 1818, Alabama in 1819, Maine in 1820, Missouri in 1821, Arkansas in 1836, Michigan in 1836.

In the American part of this work, the statistics of townships are given, as containing the greatest amount of information which can be condensed in a small compass. The statistics of counties are given, particularly because in the states south of Pennsylvania and of the Ohio river the census of the United States was taken only by counties, with the exception of cities, and they will enable a person to assign the statistics, in all parts of the country, to their respective districts. The census of the United States has been in all cases strictly followed, unless it is otherwise specified. It has doubtless some errors, but as few as could be reasonably expected; and no person can minutely examine it, without regarding it with great respect. It has been taken by officers paid by the government, and sworn faithfully to perform their duty. The census and statistics of the several states have been so minutely given, that less particularity is necessary, than would be otherwise advisable, in the general account of the United States.

UNITY, p. t., Waldo county, Me., 34 m. N.E. Augusta, 629 W. Drained by Sebasticook river. Incorporated in 1804. It has two stores, two fulling-mills, four grist-mills, seven saw-mills, two tanneries; 13 schools, 584 scholars. Pop. 1457.

UNITY, p. t., Sullivan co., N. H., 45 m. W. by N. Concord, 471 W. Drained by Little Sugar, and Beaver Meadow rivers. Chartered in 1764. It contains three churches, a Methodist, Baptist and Universalist, two stores, one grist-mill, three saw-mills; one academy, 85 students; 11 schools, 452 scholars. Pop. 1238.

UNITY, t., Westmoreland co., Pa., 7 m. E. Greensburg. Drained by Crabtree and Big Sewickly creeks. It has four flouring-mills, four grist-mills, three tanneries, four distilleries; 11 schools, 425 scholars. Pop. 3003.

UNITY, p. t., Columbiana co., O., 146 m. N.E. by E. Columbus, 277 W. It has three schools, 175 scholars. Pop. 1896.

UNST. (See ORKNEY and SHETLAND ISLES.)

UNTERWALDEN, one of the four forest cantons of Switzerland, near the centre of the confed., in which it holds the 6th rank; between lat. 46° 40' and 47° N., and long. 8° and 55' E., having W., Lucerne; N., the same cant., and the lake of Lucerne; E., Uri; and S. the Bernese Oberland. Area, estimated at 262 sq. m. Pop., in 1837, 22,571, all Roman Catholics; and of whom 12,368 belonged to Upper, and 10,203 to Lower, Unterwalden. The territory consists principally of four valleys, inclosed by mountains of various heights, the loftiest of which, the Titlis, rises to nearly 11,000 ft. above sea. Two streams, called Aa, hardly deserving the name of rivers, flow into the lake of Lucerne; and there are several small lakes, and numerous cascades. The climate is temperate, particularly in the E., where various kinds of fruit are grown. The valleys and lower hills afford fine pasturage; which makes cattle breeding the chief occupation of the inhabitants. The cattle are small, but a good cow is estimated to yield a profit of from 50 to 100 florins a year to the owner; and about 10,000 head of cattle are annually depastured in the canton. The cheese of Unterwalden is reckoned inferior only to that of the Emmenthal; and a good deal is sent into Italy. In good years the value of the cheese exported from the valley of Engelberg amounts to about 40,000 florins. Agriculture is comparatively neglected; and corn, to the value of at least 120,000 florins, has to be imported from Lucerne. The vine does not succeed; and the place of wine is supplied by liquors made from different fruits. The forests are a chief source of wealth; a good deal of timber and fuel being exported. Pine and fir, and after these, beech, oak, and elm, are the principal trees: the extensive forest of Kervald has formed the line of separation between the republics of Lower or N., and Upper or S., Unterwalden, ever since the 12th century. Mining and manufactures are insignificant; some linen thread is, however, spun in the valley of Engelberg.

In both parts of the canton, the constitution is wholly democratic. Upper Unterwalden consists of seven communes, all the male inhabitants of which above 20 years of age meet in a general assembly, exercising the sole deliberative and legislative power, on the last Sunday in April at the capital Samen. The executive body, consisting of 14 principal functionaries, chosen by the general assembly, and 65 other members appointed by the different parishes, ex-

## UPPER.

ercises all the high judicial and other functions, except in case of capital punishment; when the *triple council*, an assembly composed partly of special delegates, must pass sentence. Lower Unterwalden consists of 13 communes. Its general assembly is similarly constituted; but its government, carried on at Stanz, the capital, is more complicated than that of the other part of the canton, being conducted by a great variety of councils and assemblies. Public education is every where very backward. Both parts of the canton have but one united voice in the Swiss diet; they contribute 382 men to the Swiss army, and 1907 francs a year to the federal treasury.

Unterwalden, with Uri and Schwytz, formed the nucleus of the Swiss confederation early in the 14th century; but little worth notice has occurred in its subsequent history, except that the inhabitants of Lower Unterwalden made a vigorous opposition to the French revolutionary troops in 1798, for which they suffered proportionally. (*Picot; Stat. de la Suisse; Ebel, &c.*)

UPPER T, Cape May co., N. J., 13 m. N.E. Cape May courthouse. Bounded S.E. by the Atlantic, N. by Tuckahoe creek. It has two churches, an Episcopal and Baptist, four stores, one grist-mill, four saw-mills; five schools, 219 scholars. Pop. 1217.

UPPER ALTON, p. v., Madison co., Ill., 79 m. S. by W. Springfield, 806 W. Situated on elevated ground  $2\frac{1}{2}$  m. back from Mississippi river, and E. of Alton. It contains three churches, a Presbyterian, Methodist and Baptist, five stores, one steam flouring and saw-mill, 320 dwellings, and 1002 inhabitants. It was laid out in 1816, and since 1827 it has had a rapid growth. (*See ALTON.*)

UPPER ALLOWAYS CREEK, t., Salem co., N. J., 7 m. S.E. Salem. Drained by Alloways and Stow creeks. It has four stores, one woollen factory, six grist-mills, seven saw-mills; eight schools, 400 scholars. Pop. 2235.

UPPER BERN, t., Berks co., Pa. Bounded E. by Schuylkill river, by a branch of which it is drained. It contains a church common to Lutherans and Presbyterians, two stores, three tanneries, four distilleries. Pop. 2906.

UPPER DARBY, t., Delaware co., Pa., 8 m. W. Philadelphia. Darby's and Cobb's creeks afford water-power. It has two stores, one woollen factory, two cotton factories with 6000 spindles, one flouring-mill, three grist-mills, four saw-mills, four paper-mills; four schools, 395 scholars. Pop. 1489.

UPPER DUBLIN, p. t., Montgomery co., Pa., 106 m. E. Harrisburg, 152 W. Drained by tributaries of Wissahiccon creek. It has six stores, one fulling-mill, two flouring-mills, four grist-mills, one saw-mill. Pop. 1322.

UPPER FREEHOLD, t., Monmouth co., N. J., 15 m. S.W. Freehold courthouse. Drained by Millstone river and Tom's and Crosswick's creeks. It has 23 stores, two grist-mills, one saw-mill, seven tanneries, nine distilleries; 18 schools, 1200 scholars. Pop. 5026.

UPPER HANOVER, p. t., Montgomery county, Pa., 35 m. N.W. Philadelphia, 82 m. E. Harrisburg, 178 W. Watered by Perkiomen creek and its branches. It contains four stores, seven grist-mills, five saw-mills, four oil mills; four schools, 181 scholars. Pop. 1467.

UPPER MACUNGY, t., Lehigh county, Pa. Drained by Lehigh creek. It has four stores, two grist-mills, two saw-mills, three tanneries; one school, 30 scholars. Pop. 1769.

UPPER MAHANTANGO, p. t., Schuylkill county, Pa., 65 m. N.E. Harrisburg, 175 W. Drained by two branches of Mahantango creek. It has five stores, eight grist-mills, eight saw-mills, one distillery. Pop. 1291.

UPPER MAKEFIELD, t., Bucks co., Pa., 25 m. N.N.E. Philadelphia. Bounded N. by Pidcock's creek. It has one store, one flouring-mill, one grist-mill, one saw-mill; four schools, 238 scholars. Pop. 1490.

UPPER MARLBORO', p. v., capital of Prince George's county, Md., 23 m. S.W. Annapolis, 17 W. Situated on a branch of Patuxent river, and contains a courthouse, jail, a church, and about 800 inhabitants.

UPPER MOUNT BETHEL, t., Northampton co., Pa. It has seven stores, one fulling-mill, one flouring-mill, five grist-mills, six saw-mills, two tanneries, two distilleries; one school, 22 scholars. Pop. 2643.

UPPER MERION, t., Montgomery co., Pa. Valley and Gulf creeks afford water-power. It has 10 stores, four woollen factories, seven flouring-mills, two grist-mills, six saw-mills; one academy, 30 students; six schools, 506 scholars. Pop. 2304.

UPPER MILFORD, t., Lehigh co., Pa. Drained by the N. branch of Perkiomen creek. It contains two churches, a Lutheran and a German Presbyterian, seven stores, one fulling-mill, seven grist-mills, six saw-mills, one oil-mill, two powder-mills, two tanneries, four distilleries; three schools, 120 scholars. Pop. 3081.

UPPER NAZARETH, t., Northampton co., Pa. Drained by branches of Manokissay creek. It contains Nazareth village, and has four stores, one fulling-mill, one grist-mill,

## UPSAL.

one tannery, one brewery; one academy, 86 students; three schools, 95 scholars. Pop. 1118.

UPPER OXFORD, t., Chester co., Pa. It has two stores, one woollen factory, one cotton factory with 1080 spindles, one flouring-mill, three grist-mills, six saw-mills, two paper-mills, one pottery; six schools, 157 scholars. Pop. 1277.

UPPER PAXTON, t., Dauphin co., Pa., 23 m. N. Harrisburg. Drained by Mahantango, and Great and Little Wiconisco creeks. Bounded W. by Susquehanna river. It has six stores, two woollen factories, four flouring-mills, one grist-mill, 10 saw-mills, one oil-mill, one tannery, one distillery, one pottery; nine schools, 800 scholars. Pop. 11,814.

UPPER PROVIDENCE, t., Montgomery co., Pa. Bounded S.W. by Schuylkill river. Drained by Perkiomen and Mingo creeks. It has six stores, two flouring-mills, five grist-mills, four saw-mills. Pop. 2244.

UPPER SAUCON, t., Lehigh co., Pa., 6 m. S.E. Northampton. Drained by Saucon creek, a branch of Lehigh river. It contains iron ore, and has seven stores, four grist-mills, eight saw-mills, one oil-mill, two tanneries; four schools, 130 scholars. Pop. 2072.

UPPER ST. CLAIR, t., Alleghany co., Pa. Drained by Chartier's creek. It has one fulling-mill, one woollen factory, four flouring-mills, two grist-mills, five saw-mills, two tanneries, one distillery; one academy, 12 students; 11 schools, 360 scholars. Pop. 2302.

UPPER SWATARA, t., Dauphin co., Pa. Drained by Swatara creek. It has one woollen factory, three flouring-mills, one tannery, one distillery, one brewery, one pottery. Pop. 1205.

UPPER TULPEHOCKEN, t., Berks co., Pa. Drained by tributaries of Tulpehocken creek. The Union canal follows the latter stream along the S. boundary of the town. It contains a church common to Presbyterians and Lutherans, five stores, one forge, one woollen factory, five flouring-mills, six grist-mills, five saw-mills, two tanneries, one pottery. Pop. 2941.

UPSAL, or UPSALA, a city of Sweden, cap. prov. of same name, on the Sala, by which it is divided into two parts, 37 m. N. by W. Stockholm. Pop., 4500. "Upsala, built on a gentle height, and part of the adjoining plain in a very level and fertile country, is one of the most beautiful old-fashioned cities in Europe. The view on approaching it is very fine: an old red palace on the hill, occupied by the governor of the province, with the newly-finished university-buildings glancing white beside, and the grey towers of the cathedral rising calmly over both, give an air of grandeur to the place, as seen by the distant spectator, beyond that of any town we had yet visited in Sweden. If, on entering, this city loses somewhat of its dignity, still its broad, quiet streets, and its strange old houses, generally of brick covered with stucco, or of wood painted red and roofed with turf, impressed us at once as in excellent keeping with the character of this favoured retreat of science." (*Bremner, li., 299.*)

Only a few of the inhabitants are engaged in manufactures, or in the little trade carried on by the river, on which a steam navigation is kept up with Stockholm. The greater number depend for support on the university, the principal in the kingdom. This establishment was founded by Steno Sture in 1478, and modelled on the university of Paris. It was warmly patronized by Gustavus Vasa, who was partly educated in it. At a subsequent period, however, it was transferred to Stockholm, but was again restored to Upsal by Charles IX. It has long enjoyed a very extensive celebrity, and is at present attended by from 1350 to 1450 pupils, though of these only from 800 to 900 may be resident at any one time. Thus in the winter session of 1837, the university had in all 1376 students, of whom 874 were resident. Of the entire number, 269 attended the theological, 305 the legal, 142 the medical, and 408 the philosophical classes. The students, like those of Scotland and Germany, lodge in the town. Their average expenditure may be estimated at about £30 for the session. As many as 150 students are maintained free of expense from endowments left by Gustavus Adolphus. The public lectures are all gratuitous, and but few private lectures are attended. The lectures commence in October, and continue till Christmas, when there is a six weeks' vacation, after which they are resumed, and continue till May. No fixed number of years' study is prescribed for a degree, the rule being, that a candidate may obtain it as soon as he can pass the required trials, which few attempt till they have studied in the university for some years. The public examinations are not very formidable; but those which have first to be gone through privately with each professor, are conducted with great strictness. Printed lists of the students and professors are published every year: the former are divided into eight *nations*, named from different Swedish provinces, each of which has an inspector, curator, librarian, &c. In the lists for a recent year, there ap-

## UPSON.

pear 4 theological, 3 judicial, 5 medical, and 14 philosophical professors, in all 26; besides 19 adjuncts, and 24 docents, with a music director, and masters for German, French, English, dancing, fencing, riding, &c. Most of the professors lecture in their own houses. None have a salary of more than £300 a year, and many have much less. The university revenues amount to about 130,000 thalers banco a year. A professor who has continued in office for the space of 30 years, is allowed to retire, with the title of Emeritus, and enjoys his salary during life. The new university is a handsome and spacious edifice, built of freestone, in the Florentine style of architecture. Most part of it has been devoted to two splendid halls, one on the first story for the principal library, and another on the second for oratorios, the conferring of academic degrees, &c. The ground floor is occupied by rooms appropriated to MSS.; but, until very lately, the library, comprising 100,000 vols., remained in the old university building. The greatest curiosity in this collection, is a manuscript of the four gospels, called, from its silver letters, the *Codex Argenteus*, supposed to be a copy of the Gothic translation made by Ulfilas, the apostle of the Goths, in the 4th century. Much controversy has existed among the learned as to the characters in which this famous codex is written; especially whether it be in those used by the Goths of Moesia, ancestors of the present Swedes, or in the Frankish idiom. At all events, however, there can be no doubt of its high antiquity; it is admitted on all hands not to be later than the 6th century, and may be of the 4th or 5th, while it certainly has the further advantage of having been translated from the original Greek. The codex was found in 1597, in the library of the Benedictine abbey of Werden, in Westphalia; and having found its way (whether honestly is doubtful) into the library of Isaac Vossius, was, on his death, purchased for the comparatively trifling sum of £250 by the Count de la Gardie, who presented it to the university. (*Coze*, iv., 173, &c., 8vo ed.)

In the same edifice are preserved a beautiful cabinet, presented to Gustavus Adolphus by the city of Augsburg in 1632, and the large chest, sealed and left by Gustavus III., with instructions that it should not be opened till 50 years from the day of his death. The prescribed period expired during the past April (1842); but we have not learnt whether the chest has been opened. Here, also, is a botanic garden, and a museum, in which is a fine statue of Linnaeus by Bystrom. This university has had many celebrated individuals among its professors, especially in the department of natural history; among others may be specified, Linnaeus, Bergmann, Afzelius, &c.

The cathedral is an imposing edifice, though built only of brick: in some respects its appearance is similar to that of Notre-Dame at Paris. It is 350 feet in extreme length, with a lofty nave and a magnificent altar. The Swedish monarchs were formerly crowned in this cathedral, and here, also, they are mostly interred. Among the numerous tombs the most interesting is that of Gustavus Vasa; distinguished in every station of life, and equally great as a legislator, a warrior, and a politician. Linnaeus, also, is entombed in this cathedral, and the house is still shown which he occupied in the town.

Except the cathedral and university buildings, Upsal has no other remarkable edifice; but it has some public walks, on one of which a fine obelisk has been erected to the memory of Gustavus Adolphus. It is the metropolitan see of Sweden, and possesses an ecclesiastical school, a cosmographic, and other scientific societies.

About 2 m. N. is Old Upsal, a mere village of huts round an old church, the origin of which is lost in remote antiquity, but which certainly was once dedicated to the worship of Odin. Near it are some remarkable tumuli, and many curious antiquities have been discovered in the neighbourhood. (*Coze*, iv.; *Bremner's Excursions*, ii.; *Dict. Géog.*; *Voyage de deux Français*, &c.)

UPSON, county, Ga. Situated a little S.W. of the centre of the state, and contains 225 sq. m. Bounded S.W. by Flint river, by branches of which it is drained. It contained in 1840, 5305 neat cattle, 1791 sheep, 17,846 swine; and produced 29,333 bushels of wheat, 221,340 of Indian corn, 10,059 of oats, 8139 of potatoes, 6,477,334 pounds of cotton. It had 12 stores, two cotton factories, with 1720 spindles, four flouring-mills, 12 grist-mills, five saw-mills, seven distilleries; six academies, 303 students; seven schools, 171 scholars. Pop.: whites, 5536; slaves, 3668; free coloured, 4; total, 9408. Capital, Thomaston.

UPTON, p. t., Worcester co., Mass., 35 m. S.W. Boston, 410 W. Incorporated in 1735. Drained by West river, a tributary of Blackstone river. It contains three churches, a Congregational, Baptist, and Christian, three stores, one fulling-mill, one woollen factory, three grist-mills, six saw-mills. Pop. 1486.

UPTON ON SEVERN, a market town and par. of England, co. Worcester, hund. Pershore, on the Severn, here

## URI.

crossed by a stone bridge of 6 arches, 9 m. S. Worcester. Area of par., 3110 acres. Pop. of do., in 1831, 2343. The town is neatly built with well-paved streets. The church, rebuilt in 1758, is a handsome structure. The living, a valuable rectory, worth £379 a year, is in the patronage of the bishop of Worcester. The Baptists, and other sects, have also places of worship. A charity school for 16 girls, founded and endowed in 1718, to which a boys' school was attached in 1797, has been incorporated with two national schools supported by voluntary contribution. A subscription library has been founded. The river, which is navigable thus far for vessels of 100 tons, has a commodious wharf, and a good harbour for barges. It has no manufacture of any importance; but a considerable trade is carried on in corn, malt, coals, &c.; and a good deal of cider is brought here for shipment from Hereford and other parts. A manor court is held occasionally, and petty sessions once a fortnight. Upton is a place of great antiquity. During the civil wars it adhered stoutly to the royal cause. Market-day, Thursday; fairs, four times a year.

URBANA, p. t., Steuben co., N. Y., 211 m. W. by S. Albany, 307 W. It contains the S. portion of Crooked lake, and is drained by small streams flowing into it. Hammondsport on the lake has a communication through it by water, to New-York city. It contains two churches, a Presbyterian and Episcopal, nine stores, two fulling-mills, one woollen factory, one flouring-mill, two grist-mills, seven saw-mills, two tanneries; two academies, 60 students; 12 schools, 650 scholars. Pop. 1834.

URBANA, p. v., seaport, capital of Middlesex co., Va., 84 m. E. by N. Richmond, 146 W. Situated on the S.W. side of Rappahannock river, 18 m. from its mouth. It contains a courthouse, jail, four stores, 20 dwellings, and about 175 inhabitants.

URBANNA, p. t., capital of Champaign co., O., 46 m. W. by N. Columbus, 439 W. The village contains a courthouse, jail, a Methodist church, a market-house, nine stores, a printing-office, 150 dwellings, and 1070 inhabitants. There are in the township 10 stores, one fulling-mill, one woollen factory, two tanneries, and, exclusive of the v., a pop. of 1386.

URBANNA, p. v., capital of Champaign co., Ill., 92 m. E.N.E. Springfield, 691 W. Situated on the S. side of the west branch of Salt fork of Big Vermillion river. It contains a courthouse, jail, and about 30 dwellings.

URBINO (an. *Urbīnum Hortense*), a fortified town of central Italy, in the Papal states, cap. leg., and formerly of the duchy of its own name, on a mountain near the Metauro, 20 m. S. W. Pesaro. Pop. of the town only about 7000, but, including the suburbs, 12,000. (*Rampoldi*.) Its fortifications are a good specimen of the military works of the 14th century. Its old castle now forms part of a Carmelite convent, in which and in the churches are several fine works by Raphael and other distinguished artists. Urbino has an ancient ducal palace, which, like the *Palazzo Albani*, is a large and fine building; a newly built cathedral, with a rich chapter and archbishopric; a university with about 200 students; a college, hospital, seminary, an association called by the singular title of *Accademia Assurditorum*, and a court of primary jurisdiction. But the legate and other chief authorities of the legs. of Urbino and Pesaro reside at the latter town. Urbino is celebrated for its brass, manufactured to the value of about 14,000 crowns a year. (*Böwring's Rep.*) It has four annual fairs, and markets on Wednesday and Saturday.

Among other illustrious individuals, Urbino has to boast of having given birth to Raphael, hence called by the Italians Raffaello d'Urbino, unquestionably the greatest painter of modern times. He was born on Good Friday, 1483, and died at Rome in 1520, on the anniversary of his birth, at the early age of 37—a wonderfully brief space in which to have attained to such matchless proficiency, and to have completed so many great works. This was also the birthplace of Bramante, one of the greatest modern architects, a relative of Raphael; and of the machinist Zabaglia, and other distinguished personages. (*Rampoldi*; *Conder's Italy*, &c.)

URI, a canton of Switzerland, in the S.E. part of the confed., between the 46th and 47th degs. of N. lat., and 8° 30' and 9° E. long., having N. Schwytz and the lake of Lucerne, E. Glarus and Grisons, S. Tessin, and W. the Valais, the Bernese Oberland, and Unterwalden. Area estimated at 339 sq. m. Pop. in 1837, 40,650, all Roman Catholics. The canton consists mostly of one principal valley, that of the Reuss, into which several others open laterally; and the whole are shut in, except at the N. and S. extremities of the canton, by lofty and generally impassable mountains. Among the mountains comprised in this canton is the celebrated St. Gothard, the passage across which is the principal route from Italy into E. Switzerland. The transit trade by this road was, and perhaps still is, the most profitable occupation of the inhabitants of Uri. Various other lofty and remarkable summits are included in the ranges surrounding the canton. The principal river is the Ro-

## URUGUAY.

urus, which rises in mount St. Gothard, and after a course usually N., through Uri, in its whole length, falls into the lake of Lucerne, near Altorf. "It is," says Inglis, "a remarkable river, not for the length of its course, or the volume of its waters, but for its extraordinary rapidity, far exceeding that of the Rhone; and the magnificent scenery on its banks. Its whole course is a succession of cataracts; and in the short space of four leagues, its inclination is no less than 2,500 ft." (*Inglis's Switzerland*, p. 100.) Besides the Lake of Uri (the S. extremity of that of Lucerne) there are numerous small alpine lakes; and the canton is a good deal visited by strangers, both on account of its sublime scenery and the historical interest attached to it as the land of Tell, said to have been a native of Bürglen, near Altorf.

The pastures of this canton are very superior, and these and their cattle constitute the entire wealth of the inhabitants. A good many cattle, tended by Bergamesque cowherds, are sent thither from Italy to feed during summer. The cheese of the canton is in high repute; but it is not extensively produced; and the stock of sheep, goats, hogs, &c., is not more than sufficient for the wants of the population. Agriculture is entirely neglected. "Throughout the whole of the upper part of the valley of the Reuss and in the vale of Ursern, not one stalk of any kind of grain, nor one cultivated vegetable of any kind, is to be seen. There is no doubt, however, that these might be successfully cultivated. The vale of Ursern is better sheltered than almost any part of the Engadine, and is less elevated than many other parts where rye is grown abundantly, where other grain, even wheat, is not a failure, and where all the harder vegetables are plentiful. About 2 leagues lower down than Andermat, the valley widens. Cottages are sprinkled here and there, and now and then a hamlet; still, however, grass only was to be seen. I saw many warm stripes, and even little plains, along the river side, where wheat and vegetables could have been successfully cultivated; but I still continued to meet carts laden with flour and potatoes. As I descended still lower in the valley, the scenery became more varied and beautiful. Charming meadows lay by the river side, prettily diversified by clumps of walnut and pear trees; and cottages and hamlets thickly dotted the slopes. Altorf is surrounded by gardens and orchards; yet even here, where the climate is mild, and where the ordinary fruits come of great perfection, scarcely an ear of corn is to be seen." (*Inglis*, p. 1045.) This, however, does not originate in any want of industry, but in what is most probably a well founded conviction on the part of the inhabitants, that it is most advantageous for them to confine their attention to the breeding and depasturing of cattle, and to import their corn, flour, and other provisions, and such manufactured goods as they do not produce in their cottages. The devastations of the late war, and the construction by Napoleon of the route over the Simplon, by diverting a considerable portion of the travelling and trade carried on through this canton into a new channel, have been especially hostile to its interests. Several metallic ores are met with, and Picot (p. 237) enumerates a long list of valuable minerals found on mount St. Gothard; but mining industry is quite insignificant.

Uri is subdivided into two districts, Uri and Ursern; Altorf is the capital. The constitution is strictly democratic. The legislative power resides in the general assembly, composed of all the male population above 20 years of age, which assembles every year on the first Sunday in May, to choose the cantonal council of 44 members, to which is confided the direct executive power. There are several inferior councils for separate departments of service. Each district has its own assembly and tribunals; and in the capital is a tribunal of appeal, composed of 15 members, and presided over by the *landamann*. The communes are generally too poor to support public schools all the year round, and education is very backward; no libraries or literary societies worthy of notice exist in the canton. The inhabitants are under the ecclesiastical jurisdiction of the bishop of Chur: they are mostly of the German stock, though in the S. an Italian dialect is spoken. Contingent to the Swiss army, 236 men; do. of money to the federal treasury, 1184 francs a year. This canton is supposed to have derived its name from the *urus*, or wild bull, which formerly inhabited its valleys in great numbers. Uri was one of the three cantons which revolted from the German empire in 1307, and formed the nucleus of the Swiss confederacy. It was a principal theatre of war between the French and Austrians, in 1799-1800. (*Picot, Statist. de la Suisse*, &c.)

URUGUAY, or BANDA ORIENTAL, a republic of South America, between lat. 30° and 35° S., and long. 52° and 59° W.; having N. Brazil, E. and S. the Atlantic ocean and the estuary of the La Plata, and W. the Uruguay river (see ante, p. 611), by which it is separated from the Argentine or La Plata territories. It is of nearly circular form,

## USK.

and is supposed to embrace an area of above 200,000 sq. m. while its population is not supposed, Indians included, to exceed 150,000, or at most 200,000. It is but very little known. The coast presents the aspect of a low flat plain, without wood of any kind, and as far as the eye can reach quite level in appearance with the water. Inland, however, and particularly in the N., the country is intersected by many hill-ranges alternating with valleys traversed by considerable affluents of the Uruguay. In this territory, the humidity of the soil, which is watered by numerous rivers, is corrected by the Pampero, a remarkably dry wind. The climate of Uruguay is proverbially healthy, and it is evident that the thinness of the population must arise from the mode of life followed by the settlers, or from political causes, and not from any deficient fertility of the soil, or other natural or necessary cause. It is divided into nine departments, and possesses three principal towns, Monte Video, La Colonia, and Maldonado, 15 small towns, and eight hamlets, without including estancias or farms, and ranchos or cottages. Monte Video, having a better port and as good a government, bids fair to become a city of greater trade and wealth than its opposite rival, Buenos Ayres. (For its trade and that of the republic generally, see the art. MONTE VIDEO.) Uruguay is an integral, not a federal, republic: it formed a province, under the government of Buenos Ayres, till 1831, when it was taken by the Brazilians, and incorporated with Brazil under the title of province Cisplatina. In 1825, however, it declared itself independent; and its independence was recognised in 1828 by a treaty between Brazil and La Plata. (See *Scarlett's S. America*, 52-56.)

URUMEA, OORMIAH, or SHAHEE, a town and considerable lake of Persia, prov. Azerbaijan. The town stands in a fine plain, watered by the Shar, 8 m. W. the lake, and 65 m. S.W. Tabriz. Its population has been roughly estimated at 12,000. It is fortified with a strong wall and deep ditch, which may be filled with water from the river. Though supposed to be the *Thebarmia* of Strabo, it is said to possess no remains of antiquity worth notice: it has, however, been rarely, if at all, visited by recent European travellers.

The lake of Urumea or Shahee was visited by Major Rawlinson so late as 1838. "It extends above a degree of lat. in length, and is about 1-3d of that distance in extreme breadth. The greatest depth of water that is found in any part is four fathoms, the average is about two fathoms, but the shores shelve so gradually that this depth is rarely attained within 2 m. of the land. The specific gravity of the water, from the quantity of salt which it retains in solution, is so great, that a vessel of 100 tons burden has a draught of no more than 3 or 4 feet. This heaviness of the water prevents the lake from being much affected by storms, which, from its extreme shallowness, would otherwise render its navigation dangerous. A gale of wind raises the waves but a few feet; and as soon as the storm has passed, they subside. It is an old opinion that the waters of this lake are too salt to support animal life. No fish, certainly, are found in it, but the smaller class of zoophytes are met with in considerable numbers. The islands in the lake, until lately, were barren and uninhabited; but the largest has been recently colonized, and settlements on the rest have been proposed." (*Geog. Journ.*, x., 7, &c.)

On the E. side of the lake is the village of Shishewan, the residence of a Persian prince, Melik Kasim Mirza, a brother of the late shah, who has adopted in every particular European habits and pursuits. He has built a palace in the European style, near which he has established mulberry gardens for the culture of silk, a farm yard, a glass work, a pottery, looms for weaving cotton, silk, and worsted goods, and various other kinds of manufactures. He has also built a vessel of 100 tons, which he employs in trading on the lake; on which also, he contemplated the introduction of steam navigation. (For farther particulars, see *Rawlinson in Geog. Journ.*, x., 5-9, &c.)

USHANT (Fr. *Ouessant*), the most W. of the islands off the coast of France, forming a portion of a group near the W. coast of Brittany, dep. Finisterre, in lat. 48° 28' N., long. 5° 3' W., 26 m. W.N.W. Brest. Its area is about 2 sq. leagues, and its population rather exceeds 2000. It is difficult of access, but is tolerably fertile, affording pasture to a good many sheep and horses. It has a village, several hamlets, an old castle, and a small harbour frequented by fishing boats. Sir Edward Hawke totally defeated a French fleet, under Admiral Conflans, off the coast of this island, in 1759. Owing to the violence of the weather, two of the British ships accidentally got ashore, and were lost. At a later period, on the 27th July, 1778, an indecisive action took place off the island between the English fleet under Admiral Keppel, who had been second in command in the former action, and that of the French under Count d'Orville.

USK, a pari. and mun. bor., market town, and par. of

## USKUP.

## UTRECHT.

England, hund. Usk, co. Monmouth, on the Usk; here crossed by a stone bridge of five arches, nearly in the centre of the co., 12 m. S.W. Monmouth. The modern bor., which is more extensive than the ancient, has an area of 410 acres, with a population, in 1831, of 1160. The town is neatly, but irregularly built, the houses being mostly detached and interspersed with gardens and orchards. It is indifferently paved; and down to a recent period was not lighted. The church, which belonged to an ancient priory, appears to have been erected in the Norman period. It was originally cruciform, but has been very much altered; the square embattled tower now at its E. end, seems to have been formerly in its centre; its interior contains little worth notice, except an inscription on a brass plate, which has not yet been satisfactorily explained. The living, a vicarage, worth £250 a year, is in the gift of — Williams, Esq. Here, also, are chapels for Independents, Wesleyans, and Roman Catholics. Over the market place is the town-hall, a handsome building, erected at the expense of the late duke of Beaufort; attached to which is a lock-up house for the custody of prisoners till they can be conveyed to the county jail. The educational establishments comprise a free grammar school, founded and endowed in 1634, to which a writing school has since been attached; a national school for both sexes, supported by voluntary contributions; and almshouses for 24 inmates. Near to the latter are the remains of the ancient priory previously alluded to.

Usk is increasing not only from natural increase of population, but also from the beauty of its situation, attracting persons of independent property to build cottage villas in its vicinity. It has a small manufacture of Pont-y-pool

Japan ware, which employs four or five hands, and is the only one remaining in this part of the country, the trade having removed to Birmingham. It has no other trade peculiar to it, and very little of any kind." (*Part. Bound. Report.*) Most part of the inhabitants are engaged in husbandry and salmon-fishing. The earliest charter of the borough dates from 1398; but it has not been governed for a long period by this or any other charter. The local authority is vested in a portreeve, chosen annually; a recorder, two bailiffs, four constables, and an indefinite number of burgesses. It is associated with Newport and Monmouth, in returning one member to the House of Commons.

Total electors for the three boroughs, in 1839-40, 1304. Quarter sessions for the county are held here, as well as a court for the recovery of small debts, and a court leet twice a year.

Usk is a place of remote antiquity, and appears to have formerly been of much more importance than at present. On an eminence adjoining the town are the extensive remains of its ancient castle, formerly one of the most considerable structures of its kind in the country. It came through the Mortimers, earls of March, into the possession of the crown, and was the favourite residence of Richard duke of York, nephew of Henry VI., whose sons, Edward IV. and Richard III., were born within its walls. At a subsequent period it belonged to the earls of Pembroke; and is now the property of the duke of Beaufort.

Market-day, Thursday; fairs, four times a year, for wool, horses, cattle, and pedlery; and once a month for cattle only. (*Beauties of England and Wales; Parl. and Mun. Bound. Reps.*)

USKUP or SCOPIA (an. *Scopi*), a considerable town of European Turkey, prov. Macedonia, cap. sandjack, on the river of its own name, a tributary of the Vardar, 110 m. N.W. Salonica. Its pop. is estimated at about 10,000. It has a good many handsome mosques, Greek churches, &c.; but its streets, though wide, are filthy in the extreme. It is the see of a Greek archbishop, and has some manufactures of leather. A Turkish garrison is stationed in its old dilapidated castle.

USTIUG (VELIKI, or 'the Great'), a town of Russia, gov. Volodga, at the confluence of the Jong and Souchonia, tributaries of the Dwina, about 400 m. from the White sea, and 550 m. E. by N. Petersburg. This town, though in so remote and desolate a region, has 8000 inhabitants, and is the seat of a considerable trade between Europe and Asia. It has, according to Possart, three cathedrals and 23 parish churches, many of which are built of stone; and several private buildings, and a large exchange, are of the same material. It has numerous tallow, soap, candle, leather, and the factories, with saw-mills, and some jewellery and silver works: but its trade is chiefly in corn, lard, linen, ship timber, and sail cloth. Its merchants, who trade with the Siberian towns generally, as far as Kiachta, were estimated, in 1830, to possess an aggregate capital of 288,000 roubles; and the town revenues are estimated at 20,000 do. a year. A large annual fair is held here on the 8th July. (*Possart, Kaiserth; Russland.*)

UTICA, city, Oneida co., N. Y., is situated in 43° 7' N. lat., and 75° 13' W. long., 92 m. W.N.W. Albany, 140 m. E. Rochester, 202 m. E. by N. Buffalo, 76 m. E.S.E. Os-

wego, 388 W. Pop. in 1820, 2972; in 1830, 8323; in 1840, 12,782. The city is beautifully situated on the S. side of Mohawk river, on an inclined plane rising from the river so as to command, from its elevated parts, many fine prospects. The streets, which are numerous, are laid out with a good degree of regularity, generally, but not always crossing each other at right angles. It is well built, extensively with brick, having many fine stores and large and elegant dwellings. The streets are neat and spacious, some of them 100 ft. wide, neatly paved, with convenient side walks. It contains a courthouse, offices for the clerks of the supreme and United States courts, 18 churches, three Presbyterian, a Dutch Reformed, two Episcopal, three Methodist, four Baptist, two Roman Catholic, a Universalist, a Friends, and an African, an Exchange building, a male and a female academy, the Utica library, a Mechanics' association which sustains popular lectures, an Apprentices library, a museum, a Protestant, and a Roman Catholic orphan asylum, and various other charitable institutions, four banks with an aggregate capital of \$1,365,200, besides a bank for savings, a mutual insurance company, and 1600 dwellings. The state lunatic asylum is located about a mile W. of the centre of the city, and has fine buildings, with a farm of 160 acres attached to it. The Erie canal passes through the city, and is here 70 ft. wide and 7 ft. deep, passed by a number of lofty and elegant bridges, and adds much to its business facilities. Chenango canal, which extends to Binghamton in Broome county, here enters the Erie canal. The great Western railroad from Albany to Buffalo, passes through the place, constituting it a great thoroughfare; and numerous stages on fine roads, proceed to various places N. and S. The country around Utica is fertile, populous and rich, and it is the centre of an extensive trade. A culvert has been completed within the city from the canal to the river, which cost \$100,000. On the whole, Utica is one of the finest places in western New-York. It occupies the site of old fort Schuyler. In 1794 there were only three or four poor houses on the spot, and it dates its great prosperity from the completion of the Erie canal. There were in 1840, two commercial and three commission houses in foreign trade with a capital of \$58,000; 188 retail stores with a capital of \$1,678,595; three lumber-yards, capital \$41,000; five furnaces produced 1059 tons of cast iron, employing 34 persons, and a capital of \$50,000; 98 persons employed in internal transportation, together with 20 butchers, packers, &c., employed a capital of \$12,900; 103 persons produced machinery to the amount of \$166,555; six persons manufactured 110 small arms; 12 persons manufactured the precious metals, and produced articles to the amount of \$28,800; 13 persons manufactured various metals to the amount of \$29,000; 21 persons produced bricks and lime to the amount of \$3000; 19 persons manufactured tobacco to the amount of \$20,000, with a capital of \$4000; 73 persons manufactured hats and caps to the amount of \$123,000, and straw bonnets to the amount of \$600, with a capital of \$40,300; six tanneries produced 16,300 sides of sole leather, and 68,450 sides of upper leather, employing 38 persons, and a capital of \$103,000; 10 other manufactures of leather, as saddlery, &c., produced \$63,000, with a capital of \$12,500; 11 persons produced 140,000 pounds of soap, and 115,000 pounds of tallow candles, with a capital of \$12,000; two breweries employed 16 persons, producing 140,000 gallons of beer, with a capital of \$20,000; seven persons manufactured paints and drugs to the amount of \$18,000, with a capital of \$2100; three persons produced confectionary to the amount of \$10,000, with a capital of \$2000; one paper-mill, employing four persons, produced to the amount of \$6000, with a capital of \$4000; three persons manufactured musical instruments to the amount of \$1000, with a capital of \$500; 86 persons manufactured carriages and wagons to the amount of \$77,000, with a capital of \$40,200; one flouring-mill produced 2000 barrels of flour, and with two grist-mills and two saw-mills, employed six persons, and a capital of \$3000; 74 persons manufactured furniture to the amount of \$100,326, with a capital of \$19,110; six printing-offices, three binderies, and six weekly newspapers, employed 72 persons, and a capital of \$61,900; 61 brick or stone houses and 30 wooden houses were built, employing 208 persons, and cost \$253,000. The total capital employed in manufactures was \$496,130. There were 10 academies with 670 students, and 36 schools, 981 scholars.

UTRECHT (an. *Ultra-Trajectum*), a city of Holland, cap. prov. of its own name, on the old Rhine, by which it is divided into two parts, 20 m. S. by E. Amsterdam. Pop. 44,000. It is oval-shaped, and is one of the best situated towns in the kingdom, being built on an undulating tract of land, more elevated than the surrounding territory, and having, in consequence, a drier and purer atmosphere. The country immediately around is finely wooded, and well sprinkled with farm-houses and cottages. Fields of wheat and other grain are seen instead of unvarying green pas-

## UTRERA.

tures; and the novel spectacle presents itself of rivers and canals flowing below the general level of the country, and not above it on the tops of mounds, as elsewhere in Holland. The approach to Utrecht, from Amsterdam, is very fine, being through a long avenue of lime trees, which forms a favourite public walk. The city was formerly defended by lofty brick walls; but these are now broken and dismantled, and the old ramparts have been converted into *boulevards*. Since the separation of Holland and Belgium, however, some outworks have been thrown up.

Utrecht has an antique appearance, many of the houses being built in the Gothic style; as in other Dutch towns, the material for building is mostly brick. Mr. Jacob says, "The streets are more regular, the houses more modernised, and the squares more spacious, than in other towns of Holland. In some of the streets there are canals, or rather branches of the Rhine, for though they soon terminate in stagnant canals, they have here some motion. The water is so far below the level of the thoroughfares, that the wharfs on its sides have doors opening to a kind of caverns under the streets, in which many of the poorer classes find habitations." (*Tour in Germany, &c., p. 45*.)

The fine public walk called the Mall, on the E. side of the town, about 2000 yards in length, is divided into alleys by rows of linden trees. The cathedral, formerly a fine edifice, has been so much dilapidated that only the choir, transept, and tower remain: the last is wholly detached from the other parts, leaving room for a wide street on the place formerly occupied by the nave. It must have been originally larger than York minster, but less elegant, being mostly constructed of brick. The transepts are shut up, and the only portion at present in use is the choir, fitted up in a plain manner for the Presbyterian service, though it has some fine monuments. The tower is a huge square structure, 368 ft. in height; and from its summit the view extends over a wide extent of country, comprising many cities, towns and villages.

Utrecht has a celebrated university, founded in 1636 at the expense of the city, which ranks next to that of Leyden: it has five faculties and 19 professors, and is attended by about 600 students. The university buildings have no outward show, but they comprise a valuable library, a pretty good museum of natural history, and extensive collections in anatomy, pathology, &c.; especially one of beautifully-executed models in coloured wax. This city has also acquired distinction from the number and excellence of its superior schools. It has a museum of national agricultural implements, established in a fine building, once the residence of Louis Bonaparte, but this, according to Mr. Chambers, is an inferior collection. It has also a tribunal of commerce, an academy, founded in 1778, which gives prizes for the best memoirs on scientific subjects, a branch of the society of public good, a mint, the machinery of which is partly wrought by air-pressure, &c.

Utrecht, being in the centre of a populous agricultural district, is more bustling than the small Dutch cities in general. It has considerable manufactures of cloth and other woollen stuffs, velvets, linen fabrics, silk twist, fowling-pieces, pins, &c., with bleaching-ground, sugar and salt refineries, brick and tile works, &c. It sends six deputies to the provincial states. The famous act, called the Union of Utrecht, declaring the independence of the seven United Provinces, was signed here on the 29th of January, 1579; and the treaties of Utrecht, which terminated the war of the Spanish succession and gave peace to Europe, were concluded here, in 1713 and 1714. Among other distinguished individuals, pope Adrian VI., the preceptor of Charles V., was a native of this city. (*Schreiber, Guide du Rhin; Chambers' Tour in Holland; Dict. Geog., &c.*)

UTRERA (an. *liturge Vericulum*), a town of Spain, in Andalusia, prov. Seville, cap. distr. on the road from Madrid to Cadiz, 14 m. S.E. Seville. Pop., according to Miñano, 11,050, but, according to Capt. Scott, 15,000, mostly agriculturalists. "Utrera stands in the midst of a vast plain, that may be considered the first step from the marshes of the Guadalquivir towards the Ronda mountains, 12 m. distant to the E. A slight mound, that rises in the centre of the town, and is embraced by an extensive circuit of dilapidated walls, doubtless offered the inducement to build a town here; and these walls, some parts of which are very lofty, and in a tolerably perfect state, appear to be Roman, though the castle and its immediate outworks are Moorish. The town is large, and not walled in; the streets are wide and clean, and a plentiful stream, remarkable as being the only running water within several miles, rises near, and traverses the place." (*Scott's Ronda and Granada, ii., 141, 142.*)

It has a spacious square, two parish churches (one of singular architecture), various convents and hospitals, a good town-hall, prison, cavalry barracks, &c.; and near it is a convent, resorted to by a great concourse of devotees during a festival which lasts eight days from the 8th of

## UXBRIDGE.

September. The bulls bred in the vicinity are the most ferocious of any in Andalusia; and a considerable trade is carried on here in cattle and horses; it has, also, some manufactures of hats, soap, starch, wax, and leather. In its vicinity are some productive salt springs. Utrera is an important military post, being at the divergence of several cross-roads. The French when advancing upon Cadiz in 1810, made strenuous efforts to reach it before the Spanish troops under the Duke of Albuquerque; but, being anticipated by the latter, Cadiz was prevented from falling into their hands. (*Scott's Ronda, &c., ii.; Miñano.*)

UTTOXETER, a market town and par. of England, co. Stafford, hund. Totmonslow, near the Dove, which is here crossed by a fine stone bridge of six arches, connecting the cos. of Stafford and Derby. Area of par. 8920 acres. Pop. of do. in 1831, 4864. The town, 17 m. W. by S. Derby, stands on a hill sloping towards the river, and consists principally of three streets, diverging from the market-place in its centre. With the exception of the tower and lofty spire, which are ancient, the church has been recently rebuilt: the living, a rectory, worth £136 a year, is in the gift of the dean and canons of Windsor. Here, also, are several dissenting chapels. It has a free school for 14 boys, founded in 1588 by Mr. Thomas Allen, a native of the town, celebrated by Selden, Camden, and others for the extent of his mathematical and antiquarian learning; a national school supported by subscription; almshouses for 12 inmates; a fund for the apprenticeship of poor children, &c. Petty sessions are held weekly by the county magistrates. The hardware manufacture is carried on to some extent, and there are numerous iron forges in the vicinity. Owing to the fertility of the surrounding country, especially the excellence of the pastures along the Dove, the market held here for agricultural produce, cattle, sheep, &c., is one of the best in the county. Its trade is facilitated by the Caldon canal, which joins the Trent and Mersey canal, coming within a short distance of the town. Market day, Wednesday. Fairs 10 times a year, chiefly for cattle, horses, and sheep.

UWCHLAN, p. t., Chester co., Pa., 30 m. S.S.W. Philadelphia, 69 m. E.S.E. Harrisburg, 129 W. Bounded S.W. by Brandywine creek, which affords water-power. It contains one church, one forge, one woollen factory, one flouring-mill, three grist-mills, four saw-mills, two paper-mills, two tanneries, one distillery, one pottery; seven schools, 210 scholars. Pop. 1565.

UXBRIDGE, a market town and chapelry of England, par. of Hillingdon, co. Middlesex, hund. Elthorne, border of Buckinghamshire, on the Colne and Grand Junction canal, over each of which it has a bridge, and on the high road from London to Oxford, 15 m. N. by W. the former. Pop. in 1831, 3043. It is situated on a slight eminence sloping to the river, and consists mostly of one long street, with a smaller one on the road branching off to Windsor. The main street is paved and lighted with gas; and many of the modern houses are handsome and substantially built. The market-house, erected in 1789, is a brick building 140 ft. in length by 49 in width, supported on about 50 wooden columns. St. Margaret's chapel, built in 1447, is an irregular edifice of flint and brick in the pointed style, with a low square tower: the living, a perpetual curacy, worth £111 a year, is in private patronage. The Baptists, Friends, Independents, and Methodists have each places of worship. Two free schools, on the Lancastrian system, are held over the market-place, and are supported partly by voluntary contributions, and partly by annual subscription from the manor-funds, market-tolls, &c. A school of industry was founded in 1809, and there are several other charitable institutions for education and the relief of the poor. A reading room and public library has been established.

Uxbridge has the largest country corn-market in the kingdom. A great deal of excellent flour is made at the flour-mills in the town and its immediate vicinity, and its millers and mealmen are in general as opulent as they are respectable. Large quantities of malt are, also, produced in the town, the trade of which is greatly facilitated by the Grand Junction canal. It has also an extensive manufactory of implements of husbandry, garden-chairs, &c.; and a brick-field to the S.E. of the town furnishes employment for numerous hands. The municipal government is vested in the hands of two constables, four headboroughs, and other officers elected annually. Petty sessions for the town and several adjoining parishes are held every fortnight, and a court of requests for debts under 40s. once a month. The unsuccessful negotiation between Charles I. and the parliament in 1644 took place in an old brick building called the "Treaty House," which has latterly been converted into an inn. Markets, Thursday and Saturday; fairs, four times a year. (*Beauties of England and Wales; Priv. Inf.*)

UXBRIDGE, p. t., Worcester co., Mass., 38 m. S.W. Boston, 3 R.<sup>2</sup> 1001.

## UZES.

ton, 403 W. Watered by Munford and Westrivers. Black-stone river and canal pass through it. It contains three churches, a Congregational, Unitarian and Friends, four stores, 12 fulling-mills, five woollen factories, three cotton factories with 5500 spindles, three grist-mills, seven saw-mills; two academies, 42 students; 13 schools, 549 scholars. Pop. 2004.

UZES, a town of France, dep. Gard, cap. arrond., on the Auzon, 12 m. N. by E. Nismes. Pop. in 1836, ex. comm., 5986. It is built on the declivity of a hill, at the foot of which rises the stream which was anciently conducted to Nismes by the *Pont du Gard*. It is old, ill built, and ill laid out. It was a bishopric in the time of the Visigoths, and the old episcopal palace, and the former residence of the dukes of Uzès, are the principal edifices: the last is a huge castle, inclosed by high walls flanked with round towers, and bearing a good deal of resemblance to the Bastille in Paris, destroyed in 1789. Uzès suffered much in the religious wars, when its bishop, chapter, and most part of its inhabitants, embraced Protestantism, and destroyed their cathedral. It has a court of primary jurisdiction, communal college, &c., and manufactures of silk hosiery, coarse woollens, pasteboard, &c. (*Hugo. Art. Gard; Guide du Voyageur en France.*)

## V.

VAL-DE-PENAS, a town of Spain, in New-Castile, prov. La Mancha, part. Ciudad-Real, in a tolerably fertile plain, 112 m. S. by E. Madrid. Pop., according to Miñano, 10,248. It is well built; the mansion of the Marquis of Santa Cruz, and the warehouse of the royal tithes, being conspicuous among many other good edifices. This town would appear to be less overstocked with religious edifices than most others in Spain, for it is said to have only one parish church and one convent. It is, however, best known by the dry red wine produced in its neighbourhood, and hence called Val-de-Penas, which is in much request in Madrid, and approaches in quality to some of the stronger Bordeaux wines. The bread here is also of peculiar excellence. Some linens and soap are also manufactured, and woollen stuffs are sent to the town to be dyed. It has a large fair on the 7th of Aug. (*Miñano.*)

VALAIS (Germ. *Wallis*), a canton of Switzerland, in the S.E. part of the confed., between lat. 45° 50' and 46° 40' N., and long. 7° and 8° 25' E., having N. the Bernese Oberland, N.E. Uri and Tessin, E. and S. Piedmont, and W. Savoy and the canton of Vaud. Area estimated at 1660 sq. m. Pop., in 1837, 75,798, all Roman Catholics. This canton consists of the valley of the Upper Rhone, and may be described as "an immense trough," 70 m. in length,  $\frac{1}{2}$  m. in depth, and 2 m. wide at the bottom. The mountains on each side are the highest in Europe; they form two walls of rock, rising from 10,000 to 14,000 feet above the Rhone: this valley may therefore be considered as the deepest in the known world. On the N. side are the Alps, to which belong the Finsteraarhorn, Jungfrau, Breitshorn, and other enormous peaks; while the S. boundary is formed by the great chain from Mount Blanc to St. Gothard, including the Cervin and M. Rosa. At the upper end of the valley these two ranges unite. Sixteen lateral valleys, some of considerable extent, open into the main valley of the Rhone; and where they join it, the width of the flat part of the valley is increased. Thirteen of these lateral valleys are inhabited. That part of the valley below Sion, formerly distinguished as the *Bas-Valais*, is a flat plain, swampy, and unhealthy, where the heat of summer is intense, and millions of mosquitoes, with intermittent fevers, cutaneous diseases, and cretinism in its worst forms, abound. Above Sion, in the *Haut-Valais*, the marshes disappear, and fine pasturage and vineyards indicate a more favoured region." (*Conder's Italy, &c.,* 1, 280.) The Valais is remarkable as presenting within the smallest known area all the different climates and kinds of vegetable products met with between Italy and Iceland. At the foot of the Bernese alps the vine succeeds remarkably well, and very good wine is produced, though in its management the inhabitants be both unskillful and slovenly. Indian figs, almonds, chestnuts, pomegranates, grow with little or no culture along the banks of the Rhone, and corn of all kinds is produced at different elevations. The cattle of the Valais are inferior to those of most of the other Swiss cantons; but the rearing of stock is the principal branch of rural industry; the surplus produce in cattle, cheese, &c., being exported chiefly across the Simplon into Lombardy. The population is much poorer than that of the Bernese Oberland; which Mr. Bakewell attributes, though, perhaps, with less justice than he supposes, to two causes: first, that the land belongs to a few great proprietors, and the peasantry, being merely tenants, feel but little

## VALENCE.

interest in its improvement; and next, the prevalence of the Roman Catholic religion, with which there is usually found combined, in Switzerland at least, much ignorance and indolence. Iron, copper, lead, silver, cobalt, and small quantities of gold, &c., are met with: but mining industry is altogether neglected. Hempen cloths, woollen yarn, and woollen cloths, with a few other articles, are made; but these are almost the only manufactures. Next to cattle breeding, the transport of goods across the Simplon is the principal occupation of the inhabitants, for which purpose many mules are bred. The mineral waters of Brieg and Louèche are of some advantage to the canton, being resorted to by a good many invalids.

This canton is divided into 13 districts, called *dizains*; Sion (Germ. *Sitten*), on the Rhone, a town of 2500 inhabitants, a bishop's see, is the capital. The supreme power is in a diet, composed of four deputies from each *dizain*, chosen for two years by the *dizain* councils, which are elected by all the citizens above the age of 18 years. The presidents of the *dizain* are members of the diet by virtue of office, and the bishop of Sion has a voice in the diet equivalent to four votes. The diet meets annually on the first Mondays in May and November. The executive power is in a state council of five members elected by the diet, and who are all re-eligible, except the *grand-bailli* or president, who is eligible only after an interval of two years. Each commune has a court of primary jurisdiction; from which appeal lies to the district tribunals: the supreme court for the canton consists of 13 judges, nominated by the diet for two years, but always re-eligible. In respect of education, the Valais is behind most other parts of Switzerland. The public revenue, derived chiefly from salt and transit duties, is estimated at about 200,000 Swiss livres.

The inhabitants of the *Bas-Valais* are chiefly of the French, and those of the *Haut-Valais* of German descent. The Valais formed a part of the Burgundian, and afterwards the Frankish dominions; it next became subject to its own count-bishops; but in 1032, it was annexed to the Germanic empire. It was allied, not associated, with the cantons that formed the Swiss confederacy in the 14th century. In 1798 it entered the confederacy as a canton; but in 1802 was detached from it to form a separate republic under the protection of France. In 1810, it was incorporated with the French empire as the dep. of the Simplon; and in 1815 it again became a canton of the confederacy, in which it holds the 20th rank, contributing 1280 men to its army, and 9600 livres to its treasury. (*Picot, Statist. de la Suisse; Ebel; Bakewell; Conder's Italy, &c.*)

VALDIVIA, a town and harbour of Chili, prov. of same name, of which it is the capital. The town, on the river Calcutta or Valdivia, about 16 m. from its mouth, is an insignificant village of wooden huts, and was, for the most part, ruined by the earthquake of Nov. 7, 1837; but the harbour is probably the finest, as it is one of the most strongly fortified, in the Pacific. It is in lat. 39° 53' 20" S., long. 77° 33' 24" W., and consists of an estuary, formed by the Valdivia and several smaller rivers, entered by a narrow strait, the shores of which are lined by numerous batteries, mounting, in all, nearly 130 pieces of cannon. Ships of the line ride here in perfect safety; the depth of water, in the centre of the bay, being from 6 to 7 fathoms, and close to the shore 5 fathoms. During their struggle for independence, this valuable station was captured, with a very inferior Chilean force, by Lord Cochrane, on the 3d of February, 1820. (*Miers's Chili: Voyage of the Adventure and Beagle.*)

VALENCE (an. *Julia Valentia*), a city of France, cap. of the dep. Drôme, on the Rhone, here crossed by a handsome suspension bridge, 59 m. S. Lyons. Pop., in 1836, 8390, or, inc. comm., 10,967. "Valence lies pleasantly on the left bank of the river, surrounded by a fertile country, abounding in mulberry, almond, and other fruit trees. Opposite the town, a conical hill rises close to the Rhone; and about a mile beyond, a long range of vine-covered hills runs parallel with the river, producing the different species of St. Peray." (*Inglist's Switzerland, &c.*) The wine now alluded to, and which is not so much known in England as it deserves to be, is a dry white wine, characterized by great delicacy and sprightliness, and a flavour that partakes of the odour of the violet. When bottled in the spring following the vintage, St. Peray effervesces like Champagne. (*Henderson on Wines*, p. 176.) The town is enclosed by an old wall flanked with towers, and entered by several gates. It is irregularly laid out; but is pretty well built, and has latterly been much improved, both in its houses, a large proportion of which are of stone from the quarries of St. Peray, and in respect of cleanliness. It has several public squares and promenades, as the *Champ de Mars*, planted with trees, the *places d'Orleans, aux Clercs, &c.* The cathedral or church of St. Apollinaris is a building said, by Mr. Wood, to be in a degraded Roman style. (*Letters, i.*, 166.)

## VALENCIA.

It has a large square tower of four stories, and in the interior is the tomb of Pope Pius VI., who died, at Valencia, in 1799, with a bust of that pontiff by Canova, and some fine paintings by A. Caracci and other artists. Near this church is a private mausoleum, worth notice for its architecture. The barracks and citadel, the old residence of the governor, the courthouse, prison, public library with 15,000 volumes, and theatre, are among the principal buildings. Near the town is the polygon, a ground for the artillery-school practice.

Valencia is a bishop's see, the seat of a court of primary jurisdiction, a communal college, chamber of manufactures, societies of agriculture, commerce, and arts, &c. It has two seminaries, a school of design, several asylums, a convent, a Lutheran church, a yard for building boats for the navigation of the river, manufactures of cotton goods, silk organzine, gloves, hosiery, leather, and earthenware, with marble works, lime and brick kilns, and sawing yards. It is a depôt for the wines, silk, and other produce of the S. of France, and has six fairs a year. It was anciently the capital of the Segalauni, and became a Roman colony under Vespasian; but it possesses no Roman antiquities. It formed successively part of the kingdoms of Burgundy and Arles, and of the dominions of the counts of Provence and Toulouse; it subsequently became the capital of the Valentinois, and was governed by its own feudal nobles till ceded to Louis XI., in 1449. From the 4th to the 13th century eight church councils were held in Valencia. (*Hugo, Art. Glog.*)

VALENCIA, a kingdom or grand division of Spain, in the E. part of the peninsula, principally between the 38th and 41st deg. of N. lat., and 0° 35' E. and 1° 35' W. long., consisting of a long and comparatively narrow strip of country, extending along the Mediterranean, which bounds it on its whole length on the E.; and having inland from the N. round to the S., Catalonia, Aragon, New Castile, and Murcia. Area, 7683 sq. m. Pop., about 969,000. This is, upon the whole, one of the finest and most productive parts of the peninsula. A great proportion of the surface, particularly in the N. and W., is mountainous and rude; but the plain country, which stretches along the coast, and is watered by the Guadalquivir, Xucar, Mogra, Segura, &c., is a species of garden. All travellers coincide as to its extreme beauty, and superior cultivation, compared with the rest of Spain. Inglis, who has travelled over many of the finest parts of Europe, says, "The view of the plain is superb. Though not greener or more beautiful than the vale of Murcia, its immense extent and great populousness produce a more striking effect. The plain is probably little less than 30 m. long, and 20 wide; on three sides it is bounded by the mountains, and on the fourth by the sea; and throughout the whole of this vast extent, there is not an acre that does not produce its crop of grain, vegetables, or rice. The olive, mulberry, ilex, algarob, orange tree, and palm, with all of which the plain is thickly dotted, give it the appearance of a union of garden and orchard; but the populousness of the plain is even more striking than its beauty and fertility. It forms altogether a prospect that, in richness and animation, cannot be equalled in any other country."

"The plain of Valencia produces every kind of crop congenial to the climate; two and three crops in the year are taken from it, and the greater part of the land returns 8 per cent. The rice crops are among the most valuable; they are chiefly produced in the territory of Albufera, surrounding the lake of the same name. This was the property first proposed to be granted to the Duke of Wellington, but the Cortes of Valencia objected to it, and the estates near Granada were substituted. The rice grounds produce only one crop in the year, but the return is from 8 to 10 per cent. The rice is put into the ground in June, and cut in September; water is then let in upon the ground, and when the stubble roots, the land is ploughed up, and no other manure is required. In Valencia and its neighbourhood, rice is in universal use by all classes, but the produce is much greater than the consumption of the plain; and the surplus is exported to the different parts of Andalusia. The whole produce is estimated at 12,000,000 arrobas, one half of which at least is exported; and the average price may be taken at about 3s. the arroba, or nearly 1½d. per lb. The other chief product is the white mulberry, once the source of great riches, through the silk factories of Valencia. The produce of silk from the plain is now computed at about 1,000,000 lbs. a year; by far the greater part is exported in its raw state, at an average price of from 8s. to 10s. per lb. The export of fruit from Valencia is large, particularly of raisins; these are of two kinds, the muscatel and an inferior raisin; but neither is equal to the raisins of Malaga. In 1829, 47,000 quintals of the best, and 42,000 of the inferior sort, were exported exclusively for the English market. The export of figs, oil, and wine from the provinces and different

ports of Valencia, is also considerable; particularly the latter, called *Beni Carlo*, exported from the town of the same name. This wine is sent chiefly to Cetta, from whence much of it finds its way, by the canal of Languedoc, to Bordeaux, to give body and colour to the clarets." (*Inglis*, ii., 258-262.) Barilla, sugar-cane, saffron, aniseed, &c., are also grown.

But, despite the abundance of the province, the peasantry, as is frequently the case in the most productive parts of the continent, appear to be in a very depressed condition. The *kuerta* of Valencia, says Inglis, belongs, for the most part, to great proprietors. The duke of Medina Cell has a revenue of 75,000 dollars a year from his estate there, and the families of Villa Hermosa and Benevento have almost as much; and, in fact, there are very few persons who cultivate their own land. And, though state taxes do not weigh down industry in this province, the Valencians are subject to heavy feudal services and seigniorial demands, levied in kind on the produce of the soil, amounting to 1-7th, 1-6th, and, in some places, 1-4th of the crop! (*Mod. Trav.*) But these circumstances do not sufficiently account for the depressed condition of the peasantry; which is rather to be explained by the fewness of their wants, originating in the mildness of the climate, and their want of all desire to improve their situation.

No great number of cattle or horses are kept; and the sheep, though pretty numerous, yield wool of only a mediocre quality. A good many tunnies are taken on some parts of the coast by a method similar to that practised in the Neapolitan dominion. Mercury, copper, sulphur, arsenic, argentiferous lead, iron, coal, &c., exist in many places; but are procured only in small quantities. Salt from springs, marble, and potters' clay are the principal mineral products. Manufactures are unimportant; woollen and linen fabrics are indeed made in most of the towns, and silk goods in Valencia, Gandia, &c., but, at present at least, in very inconsiderable quantities. Cordage is made from the fibre of the *esparto* (*stipa tenacissima*), aloe, *juncus*, &c.; and tiles, similar to the Delft manufacture, soap, glass, paper, &c., are made in small quantities. An active internal traffic is kept up, the N. supplying the S. districts with timber, earthenware, linen and woollen stuffs, *esparto*, brandy, cattle, &c.; while the latter sends to the former corn, fish, Levant produce, silk, algarobis, &c.; Valencia sends rice, silk, fruit, and fish to Aragon and Castile, for corn, wool, and cattle; and flax, hemp, silk, oil, rice, soap, &c., to Murcia and Granada. Its foreign commerce is chiefly with Italy, England, France, Holland, and S. America; from which countries, corn, salt, fish, ship-timber, pitch, tar, iron, fine linens, and other manufactured goods, are imported. Alicante, Valencia, Vinaroz, Murviedro, Benicarlo, and Guardamar, are the principal ports. (*Fischer's Picture of Valencia*.)

Very different opinions respecting the character of the population have been entertained by different travellers. "Upon the whole, the Valencians would appear to be an airy, lively, active, but effeminate people, very different in manner from the Castilians; while their character forms apparently a still stronger contrast to the savage heroism of the Catalonians and Aragonese. Their dialect, though much akin to the Catalanian, is said to differ in it retaining more of the provencal." (*Mod. Trav.*, xviii., 167.) This province was successively subject to the Carthaginians, Romans, and Visigoths, from whom it was taken by the Moors in 713. They held possession of it till 1238, when it was conquered by the Spaniards and annexed to Aragon. It afterwards formed a component part of the Spanish monarchy, but continued to preserve its representative body and its privileges, till the early part of the 18th century, when having, in the war of the Succession, taken part against the Bourbon dynasty, it was, on their establishment on the throne, deprived of its old constitution, and obliged to conform to the laws of Castile. (*Milano; Antillon; Inglis's Spain; Swinburne; Townsend, Weiss, &c.*)

VALENCIA (an. *Valentia Edetanorum*), a city of Spain, cap. of the above kingdom, on the Guadalquivir, about 4 m. from its mouth, and 188 m. E.S.E. Madrid. Lat. 39° 28' 53" N.; long. 0° 24' 50" W. Pop. 65,840. (*Milano*.) It stands in a wide plain on the bank of the river which washes its walls, and separates it from its suburbs, with which it communicates by five bridges, of from 10 to 13 arches. The city is nearly circular, and about 2½ m. round, enclosed by massive walls, with towers, and four gates. The old streets are crooked, narrow, unpaved, and frequently destitute of thoroughfare; but some new quarters have been laid out, with broad streets and squares, which are said to be well paved and well kept. Valencia is well lighted, and guarded by a patrol of watchmen, termed *serenos*. It is furnished with public sewers of great solidity, which some affirm were constructed by the Romans; and it has many private wells, though only one public fountain. Good yards faced with stone, and planted with trees, line the river in

## VALENCIA.

the whole length of the city. A fine view is obtained from any one of the bridges; the line of irregular buildings following the curve of the river, and the bridges, one beyond another, with the great Moorish gates, give it an air of much grandeur. Few cities, even in Spain, have, or rather had, so many religious edifices as Valencia: among these were reckoned no fewer than 27 convents for men and 22 for women, 16 churches, and 24 chapels and hermitages, amounting altogether to 86; so that we need not wonder that the streets abounded with friars and priests, and that the influence of the religious bodies was predominant! (*Ingliš, il.*, 251.) The cathedral is of intermixed Greek and Gothic architecture, surmounted by a dome. It has numerous altars, a good deal of fine marble, some bas-reliefs, and paintings by some of the first Spanish masters. It is very rich in plate and relics. Some of the churches have domes, but the greater part tall, slender turrets, with all sorts of pilasters and whimsical devices. In the multitude of sacred edifices, some may be found that excel in particular parts, or strike by the richness of their decorations; but all are overloaded with ornaments. (*Swinburne's Trav.*, i., 153.) In most, however, are fine paintings by Jueanes, Espinosa, Ribalta, Ramirez, Victoria, a pupil of Carlo Maratti, and many other artists, all natives of Valencia. The famous Supper of Ribalta is in the Corpus Christi college; and the same subject by Jueanes, a work reckoned among the finest pictures of Valencia, is in the church of St. Nicholas, which also possesses sundry other fine pictures.

The exchange, custom-house, the temple, a palace built for a military order, by Charles III., the archbishop's palace, college of Pius V., and several noble residences are worthy of notice; there are five hospitals, one of which is a large establishment for medical treatment of all kinds, several asylums, prisons, barracks, a theatre, &c. *Ingliš* says, "Valencia is one of those cities, in which traces of Moorish dominion are the most visible; not in any splendid Alhambra or Alcazar, but in everyday sights and common objects. Gateways are occasionally seen sculptured in marble upon Moorish designs; stones over the doors, or underneath the windows, show by their chiselled marks their ancient fashioners. All the Moorish tokens also distinguishing the populations of Seville, Malaga, and San Felipe, are found in even greater distinctness in Valencia." (*Spain, il.*, 253.)

The university, founded in 1411, was formerly considered the best in Spain, particularly for the study of medicine. In 1830, it had nearly 2500 students, who were principally divided between law and philosophy. The professors, of whom there are about 70, are friars, except those who instruct in law: their salaries are from £50 to £130 a year. Lectures are delivered from October 11 to May 31. Education in the university is nearly gratuitous, and many of the students were in the habit of receiving portions of the food distributed daily from the convents. The university library has not more than 15,000 volumes, but its deficiencies are compensated by a good library in the archbishop's palace, with attached cabinets of antiquities, medals, &c., open for six hours daily. There are six other colleges, and many inferior academies; the royal academy of Saint Charles, for the instruction of students in the fine arts, is the only institution in the city not under the superintendence of the priests.

The manufactures of velvets, taffetas, flowered damasks, and other silk stuffs, are said, at the end of last century, to have employed upwards of 3000 looms; but if so, they have greatly declined in the interval. The existing manufactures comprise woollen fabrics, camlets, hats, table and other linen, gauzes, artificial flowers, carpets, glass, paper, &c., with the "Valencia tiles," used for the flooring of houses in all the cities of the S. of Spain. These tiles are at once cool, and highly ornamental; but they are far from cheap, those of the best quality being much more expensive than an equal extent of the most sumptuous carpeting. A good workman employed in painting the tiles earns about a dollar a day.

The port of Valencia is at Grao, about 2 m. distant. It is connected with the city by a broad planted avenue, forming the favourite public promenade around the city. The harbour is suitable only for barks, and the roadstead is exposed to the S. and S.W. gales. The climate, though hot, is agreeable and healthy; and the city is a good deal resorted to by invalids. Society in Valencia appears to differ little from that in other S. Spanish towns. Many persons of rank and wealth reside here, but without any display. Travellers bear testimony to the agreeable vivacity, ready wit, freedom from affectation, and obliging disposition of the inhabitants. But *Ingliš* says, that in Valencia, more than in any other city, he was struck with the absence of mental cultivation. But we apprehend the traveller must have been unlucky in his acquaintance. Mental culture may and most probably is at a low level; but the city which is the seat of perhaps the most flourishing university in the country, which has, also, produced many distinguished natives, and in which

## VALERY (ST.)

the first printing-press introduced into Spain was established, is not likely to be the zero of the intellectual scale.

Valencia was held by the Moors from 1715; but taken from them, in 1094, by the celebrated Cid, Ruiz de Diaz de Bivar. After his death it was governed by his widow Ximene, under whom it sustained successfully one siege against the Moors of Cordova, but ultimately capitulated to them in 1101. It was retaken by James I. of Aragon, in 1238, and peopled afterwards with Catalans and French settlers. It was taken by the French under Suchet, in 1812, and held by them till June, 1813. (*Miñano, &c.*, *ut supra.*)

VALENCIA (NUEVA), a city of Colombia, republic of Venezuela, prov. Carabobo, in a plain about 3 m. W. of the lake of Valencia, and 18 m. S. by E. Puerto Cabello. Pop. estimated at 16,000. It covers a large extent of ground, most part of the houses having only a ground floor. The streets are very broad, and the market-place is of great size. The entrance to the town from the N. is by a good bridge of three arches, built of stone and brick; near which is the *glorieta*, a large circular space where the inhabitants meet in the evening for dancing and festivity. Humboldt says, "It is regretted, and perhaps justly, that Valencia has not become the capital of the country." Its situation near Puerto Cabello, with which it is said to communicate by a good road, gives it many advantages, and it is a place of brisk traffic. But it has the great disadvantage of being infested with white ants, whose excavations underground at certain seasons become very dangerous to the buildings of the city.

The lake of Valencia or Tacarigan is larger than the lake of Neuchâtel in Switzerland, but in its general form it has a nearer resemblance to that of Geneva, which is about the same high, above the sea. The opposite banks of the lake also offer a similar contrast. Those on the S. are desert and almost uninhabited, and a screen of high mountains gives them a gloomy and monotonous appearance: the N. shore, on the contrary, is cheerful, pastoral, and set off with sugar, coffee, and cotton plantations. There are numerous islands in this lake, the waters of which are gradually diminishing. Its mean depth is from 12 to 15 fathoms; where deepest, it is not more than 40 fathoms. It abounds with fish, and is used for the purposes of commerce; but it is a singular fact, that for more than two centuries none of its navigators ever thought of using a sail! An English traveller, of no very distant period, says that a native of Biscay, settled in Valencia, had then first tried the experiment, "and the circumstance formed no small part of the conversation of those who were assembled at the pulperia of La Cabreria." (*Mod. Trav.* xviii. 178; *Humboldt, Pers. Narrative*, iv. ch. xvi; *Codazzi, Geog. de Venezuela*, &c.)

VALENCIENNES (an. *Valentiana*), a town of France, dep. du Nord, cap. arrond.: on the Scheldt, where it is joined by the Rhonelle, 23 m. S.S.E. Lille. Lat. 50° 21' 27" N., long. 31° 31' 55" E. Pop., in 1836, ex. com., 16,679. It is a secondary fortress, and has a citadel constructed by Vauban. It is tolerably well built, but ill laid out; a part of it was much damaged by the severe bombardment it received in 1793, the marks of which are still visible. The Scheldt intersects the town from N. to S., dividing it into two unequal parts. There are several public buildings. The town-hall, built in 1612, is of mixed architecture, highly decorated, and contains some fine apartments; the second story is appropriated to a picture gallery, in which are some works by Rubens. Attached to it is a belfry, constructed in the 13th century, 180 ft. in height. The lower part of a handsome theatre serves for a corn-hall. The general hospital, founded in 1751, is one of the largest establishments of its kind. The public library has 18,000 vols., and the museum of natural history is rich in collections. There are military and foundling hospitals, barracks, magazines, an arsenal, a college, an academy of the fine arts, founded in 1762, &c. Besides Valenciennes lace, a good deal of fine cambric, cotton yarn, hosiery, and blankets, iron plate and nails, starch, saltpetre, linseed oil, chicory, earthenware, and toys, are made in the town, which has also cotton-printing works, tanneries, distilleries, and salt refineries; and a considerable trade in wine, brandy, oil, soap, timber, and charcoal.

Valenciennes has sustained several sieges, the most memorable of which took place in 1793, when it was invested by an Anglo-Austrian army under the late Duke of York, to whom it surrendered at the end of six weeks, during which the besiegers sustained great loss. It was re-taken by the French from the Austrians in the ensuing year. Among the many distinguished natives of this town, have been—Froissart, the historian of chivalry, Wattau, the painter, and D'Argenson, the minister. (*Hugo, art. Nord; Guide du Voyageur, &c.*)

VALERY (ST.), usually called St. Valery-en-Caux, a town and seaport of France, dep. Seine-Inférieure, cap. cant.: on the British channel, 334 m. N.W. by N. Rouen. Pop., in 1836, 5236. Its port, enclosed between two cliffs, is small, and not fit for the accommodation of vessels of con-

## VALETTA.

siderable burden. St. Valery has manufactures of soda and cotton thread, with some trade in the exportation of Rouen fabrics, and in the importation of timber, dried fish, corn, &c. Many of its inhabitants are engaged in the cod, herring, and mackerel fisheries, and they enjoy the reputation of being good seamen. The country round is mostly in pasture.

St. Valery-sur-Somme is another seaport town, on the N. coast of France, dep. Somme, 11 m. N.W. Abbeville. Pop., in 1836, 3285. Its port is much larger than that belonging to the above town, and admits vessels of from 300 to 400 tons. It has large salt magazines, with manufactures of cordage and sail-cloth, and a brisk general traffic: of late years, an intercourse by steam has been occasionally kept up between this town and London. (*Hugo, arts. Seine-Inférieure and Somme; Dict. Géog. &c.*)

VALETTA (LA). See MALTA.

VALLADOLID (an. *Pintia*), a city of Spain, cap. prov. and dep. of its own name, in Old Castile, on the Pisuerga, here crossed by a stone bridge of 10 arches, where it is joined by its tributary the Esqueva, over which many small bridges are thrown, 73 m. S.W. Burgos, and 100 m. N.W. Madrid. Lat.  $41^{\circ} 45'$  N., long.  $4^{\circ} 6'$  W. Pop. 20,960 (*Miñano*). It stands in a plain bounded by limestone hills, and is surrounded by an old wall which encloses a large extent of ground. Swinburne says "Valladolid is a very large rambling city, full of edifices, which, during the reign of Philip III., who made it his constant residence, were the palaces of his great officers and nobility. Being abandoned by their owners, who have followed the court in all its different emigrations, they are fallen to decay, and exhibit a picture of the utmost desolation. The private houses are ill-built and ugly. The great square, some streets built up on porticoes, and many colleges and convents, are still grand, and denote something of former magnificence; but in general, Valladolid has the appearance of having been run up in a hurry to receive the court, and as if it had been meant to rebuild it afterwards, at leisure, of more durable materials than bad brick and mud, the composition of most of its present houses." (*Trav. ii.* 254, 255.) Upon passing the first gate from the Madrid road, the traveller enters the *campo grande*, a spacious area surrounded by 17 convents, the scene of repeated *auto de fees*, signalized by the burning of not a few heretics.

Valladolid has, or recently had, 16 parish churches, upwards of 40 convents, nine chapels, eight colleges, three hospitals, several asylums, barracks, &c., though, except some of the religious buildings, none deserve much notice. The cathedral, an unfinished edifice, built by Juan de Herrera, at the expense of Philip II., was intended to be one of the most sumptuous in Spain; but, according to Townsend and others, it is heavy and inelegant. The church and convent of St. Benito are handsome, but the church of St. Paul is probably most worth attention, from its general elegance, and the finish of its bas-reliefs and ornaments, which, after a lapse of 300 years, seem to have suffered little by their exposure to the weather. (*Townsend, i.* 365.) Laborde speaks of fine sculptures by Gregory Hernandez, &c., in this and several other churches in Valladolid; but whether they have been removed is more than we can undertake to say. The royal chancery is a large and fine structure in the Tuscan order. The old palace, in which Philip II. and III. were born, is an utter ruin: when Twiss visited the city its bare walls only were standing.

Valladolid has a university founded by Alonzo XI. in 1346: it was formerly distinguished for its school of jurisprudence, and continued to flourish till the end of last century; and it appears, even now, to be more frequented than Salamanca. Among the colleges of the city were one for the Scotch and one for the English, both of which were well endowed. The school of the fine arts is privileged as an academy, and has a superior collection of models in sculpture, architecture, and painting.

Valladolid was formerly an important commercial city; but its manufactures of woollen stuffs, hats, silk ribands, linen and cotton yarn, paper, liquorice, perfumery, earthenware, leather, &c., are now little more than sufficient for the supply of the town: its trade, however, would most probably increase were the Pisuerga made navigable to the Douro, only 10 m. distant. The country round produces white wine, of good quality, madder, silk, olives, &c., and coal is said to abound in the neighbourhood, though, if the statement be correct, little, if any, use is made of this valuable material.

Valladolid is the see of a bishop, under the archbishop of Burgos, the residence of a captain-general, military intendant, *corregimiento*, &c. It was incorporated as a city, and made a bishop's see by Philip II., and was the residence of the court from his time till that of Philip IV., who removed to Madrid. Columbus, the discoverer of the New World, expired in this city on the 20th May, 1506. (*Miñano; Swinburne; Townsend; Twiss; Mod. Trav.* xix., &c.)

## VALPARAISO.

VALLADOLID, or MECHOACAN, a city of Mexico, cap. intend. of same name, in a fine valley, 120 m. W.N.W. Mexico. Its population early in the present century was estimated at 18,000, and is probably about the same at present. Mr. Ward says, "I know few places the approach to which (from the N.) is so tedious as that to Valladolid. For more than two hours you see the city apparently below you, while the road continues to wind among the surrounding hills. At length a rapid descent conducts you to the plain, where a long causeway, built across a marsh, forms the entrance to the town. The suburbs are poor and insignificant, but the high street is fine, and the cathedral, standing alone and open, has a very imposing effect. The view of the town from the Mexico side is beautiful: gardens and orchards form the foreground; while the lofty aqueduct, erected toward the end of the last century, the gorgeous churches, and a bold range of mountains behind, fill up the remaining space. Nearly all the public edifices, not immediately connected with the government, are due to the munificence of the bishops, most of whom have contributed to enrich or adorn the town. The cathedral, hospitals, and aqueduct are all the works of the church. The first is a magnificent building, and wealthy, though despoiled of much of its treasures during the revolution." (*Ward's Mexico*, ii. 374-377.) Valladolid has a handsome public promenade; and its climate is temperate, as it stands nearly 6400 ft. above the level of the sea. Iturbide, the short-lived emperor of Mexico, was a native of this city.

Valladolid is the name of another Mexican town in Yucatan; but it is of no great importance.

VALOGNES, a town of France, dep. Manche, cap. arrond., on the Merderet, 12 m. S.E. Cherbourg. Pop., in 1836, ex. comm. 6034. It is a well built town, and has a handsome communal college, and public library, with 15,000 printed vols.; manufactures, on a small scale, of earthenware, lace, gloves, and leather; and some trade in provisions and shell fish for the Paris market. The ancient Roman town *Alauna* was situated in its vicinity. In the middle ages it had a strong castle, which, however, has been totally destroyed. Tournier, the translator of Shakspeare, and the celebrated anatomist Vicq-d'Azyr, were natives of Valognes. (*Hugo, art. Manche, &c.*)

VALPARAISO, the principal seaport town of Chili, prov. Santiago, on the Pacific, 60 m. N.N.W. Santiago. Lat.  $33^{\circ} 11'$   $59'$  S., long.  $71^{\circ} 31'$   $8'$  W. Pop. probably about 10,000. It is inconvenient and ill-built, but its appearance from the sea is imposing, being built, somewhat like Hastings, at the foot of a precipitous range of hills. It consists chiefly of a straggling, long street, or rather terrace, for it is built only on one side, with some narrow and inconvenient thoroughfares leading out of it up the several ravines. In one of these is the *plaza*, a small triangular space, where the market is held; and near it are the principal church, the Dominican and Franciscan chapels, &c. A little to the N. is the castle of Antonio, mounting about a dozen guns; and between it and the plaza are a number of low buildings and sheds, termed the arsenal. In the N. quarter of the town, in a recess larger than the other ravines, is a collection of narrow lanes and mean houses; and many isolated dwellings are scattered about among the hills, the only access to which is by winding footpaths. The suburb, Almendral, on the sandy shore to the S., is more regularly laid out: the houses here, where there has been more room to build, consist mostly of a ground floor only; but in the town of Valparaiso all have stories above the ground floor. They are in general painted of lively colours. About the middle of the Almendral are the ruins of the church and convent of La Merced, which, like many other buildings in Valparaiso, was destroyed by the earthquake of 1822.

The bay of Valparaiso is open to the N., but sheltered by heights on all other sides; and the holding ground, being mostly a stiff clay, offers a secure anchorage, except during N. gales. Opposite the custom house, 100 yards from the shore, there are 5 fathoms water, which suddenly deepens to 10 and 20 fathoms, at the distance of 300 yards, and in the centre of the bay are from 25 to 30 fathoms. (*Miers, i.* 44.) The harbour is defended by the castle, and two forts at the N. end of the Almendral, and another fort inland. There is no mole, nor any facility for landing goods, except by launches, which are moored to the shore, and across which all packages are brought on men's shoulders; or by boats, which, however, can land in all weathers, in the Fisherman's bay, between the castle and fort St. Antonio. There are generally a considerable number of vessels in the bay, the greater part British and American; and Valparaiso continues to be the central depot for the trade of Chili. Large quantities of corn are shipped here for Callao and Panama, especially the former. Wheat, tallow, hides, copper, the precious metals, indigo, wool, and sugar, are among the principal exports. The market of Valparaiso is well supplied with meat, poultry, fish, bread, fruit, and vegetables, at very moderate prices and of good

## VAN.

quality; and its climate is generally agreeable. (Stevenson's *S. America*, iii. 161.) Unless, however, it have materially altered of late years, it would appear, from Mr. Miers' report, to be subject to many drawbacks as a place of residence. "Independent of the want of society, there exists no public amusement, no theatre, commercial reading or news-room, no parade, not even a single spot to walk upon, nor any retirement or exit from the town, but over the barren steep hills, which renders the exercise more a toil than a pleasure. In short, in spite of its matchless and beautiful climate, I do not know in all Chili a spot presenting a more uncomfortable and cheerless place of residence than Valparaiso." (*Miers' Travels in Chili*, i. 449; *Commercial Diet.*, &c.)

VAN, a city and considerable lake of Asiatic Turkey, each of same name; the city being on the E. bank of the lake, 140 m. N. by E. Mosul, and 145 m. S.E. Erzeroun. Pop. according to Col. Shiel, 12,000; but this is most probably much under the mark, seeing that it had been previously estimated by Kinneir at 50,000, and has since been estimated by Mr. Brant at 7000 families, which would amount to at least 40,000. The inhabitants consist of Turks, Kurds, and Armenians. It is situated in a fine plain, covered with gardens, nearly 5500 ft. above the sea, at the S.W. foot of an isolated rock, on which is its citadel. It is inclosed with double walls of mud and stone, having large round and small square bastions, and is farther defended, though not on all sides, by a ditch. "The streets are narrow, dirty, and ill paved; the exterior appearance of the houses in general mean; there was, however, to be seen occasionally a residence, which showed that it had once belonged to a man of consequence; but the general aspect of the city indicated decay. The bazaars were confined, and the shops ill-furnished; and I scarcely saw an article of European manufacture: there was, however, an abundance of Venetian glass beads, with which the Kurd females ornament their persons. The supply of fruit was superabundant." (*Brant in Geog. Journ.* x. 384.) The account of the city given by Kinneir is less unfavourable; but Brant's, being the later, is perhaps all the more accurate.

It has two large Armenian churches, four large mosques, several baths, caravanserais, &c. The great boast and dependence of Van is its gardens, which cover an extensive area between the city and the mountains. They comprise vineyards, orchards, melon-grounds, fields, &c. In summer the inhabitants of the town mostly reside in the gardens, the roads in which being lined with houses, the whole appears like an extensive village. Streams, bordered with willows, run through the main avenues. (*Brant in Geog. Journ.* x. 391-393.)

The castle on the N.E. side of the town is built on a high and abrupt limestone rock, and, if the works were in proper repair and efficiently manned, would be all but impregnable. There are some very extensive excavations in this rock.

The trade of Van is at present inconsiderable. About 500 looms are employed in manufacturing coarse calicoes from cotton imported from Persia, mostly for home consumption: though some are sent to Bitlis to be dyed and exported. Almost the only other articles of export from Van are fruits, wine, and grain, the produce of the surrounding gardens and fields. Every person of respectability has a house in town, with a country house, an orchard and vineyard, and perhaps a few fields. Most of his wants are supplied from his garden, or from the profits of a petty trade carried on with a capital of from £20 to £100.

There can be no doubt that Van is very ancient. The walls of the castle are in part Cyclopean, and many inscriptions in the cuneiform character have been discovered in the town and its environs. It is even affirmed that the castle was originally founded by Semiramis; but it is almost needless to say that there is no evidence by which to support this very improbable statement. Timour Bec, or Tamerlane, who took Van towards the close of the 14th century; is said, by the Persian writers, to have endeavoured, though ineffectually, to destroy its ancient monuments.

The lake Van, the *Arasis* of Ptolemy, is of a very irregular shape; greatest length N.E. to S.W. 70 m.; greatest breadth about 28 m. Area estimated at 1000 geog. sq. m. (*Geog. Journ.* x.) It seldom freezes to any distance from the shore, except at its N.E. end, where, being shallow, in severe winters, it may be crossed on the ice. It has several islands, on one of which is an Armenian monastery. It is navigated by five or six crazy boats, which are sometimes employed to convey cotton cloths to Tadvan on their way to Bitlis, bringing back grain and timber. From the many wild fowl that frequent it, there is no doubt that fish abound in the lake; the fishery, however, occupies very few hands. (*Geog. Journ.*; *Kinneir's Pers. Emp.*; *Smith and Dwight's Missionary Researches*, *Introd.*, &c.)

VAN BUREN, county, Mich. Situated towards the S.W. part of the state, and contains 633 sq. m. Bounded W. by

## VAN-DIEMEN'S LAND.

lake Michigan. Drained by Papaw r. and the S. branch of Black r. and their branches. Papaw river is boatable 70 m. from its mouth in Berrien county. It contained in 1840, 2125 neat cattle, 538 sheep, 3422 swine; and produced 15,640 bushels of wheat, 25,557 of Indian corn, 10,176 of oats, 20,832 of potatoes, 25,365 pounds of sugar. It had four stores, two grist-mills, eight saw-mills; 23 schools, 516 scholars. Pop. 1910. Capital, Papaw.

VAN BUREN, county, Iowa. Situated in the S.W. part of the territory, and contains 504 sq. m. Drained by Des Moines r. and its branches. Copper, iron, and tin ores are found, and fine marble and bituminous coal. It contained in 1840, 5364 neat cattle, 2667 sheep, 15,821 swine; and produced 8756 bushels of wheat, 151,481 of Indian corn, 1046 of buckwheat, 12,174 of oats, 18,150 of potatoes, 6869 pounds of sugar. It had 16 stores, 10 grist-mills, 12 saw-mills, one tannery, two potteries; six schools, 123 scholars. Pop. 6146. Capital, Keosauke.

VAN BUREN, county, Mo. Situated in the W. part of the state, and contains 648 sq. m. Bounded S. by Grand r., drained by Big cr. It contained in 1840, 1726 neat cattle, 3332 sheep, 19,573 swine; and produced 1644 bushels of wheat, 222,541 of Indian corn, 11,000 of oats, 9112 of potatoes, 8875 pounds of tobacco, 2590 of cotton. It had 11 stores, one flouring-mill, six grist-mills, two saw-mills, four tanneries; 13 schools, 298 scholars. Pop.: whites, 4449; slaves, 214; free coloured, 31; total, 4693. Capital, Harrisonville.

VAN BUREN, county, Ark. Situated a little N. of the centre of the state, and contains 1350 sq. m. Drained by little Red r. and its branches. It contained in 1840, 2868 neat cattle, 520 sheep, 9213 swine; and produced 1545 bushels of wheat, 79,800 of Indian corn, 3257 of oats, 2615 of potatoes, 1220 pounds of tobacco, 8051 of cotton. It had five stores, seven grist-mills, three distilleries; four schools, 95 scholars. Pop.: whites, 1459; slaves, 59; total, 1518. Capital, Clinton.

VAN BUREN, p. t., Onondaga co., N. Y. 12 m. N.W. Syracuse, 141 m. W. by N. Albany, 358 W. Bounded N. and W. by Seneca r. Drained by Canip brook. It has eight stores, one fulling-mill, one flouring-mill, two grist-mills, eight saw-mills, one tannery, one distillery; one academy, 61 students; nine schools, 436 scholars. Pop. 3021.

VANDALIA, p. v., capital of Fayette co., Ill., until 1840, the capital of the state, 82 m. N.E. St. Louis, 781 W. It is regularly laid out with streets crossing each other at right angles, which are 80 ft. wide. "It has a public square in the centre, and contains a courthouse, jail, a United States land office; two churches, a Presbyterian and Methodist, 11 stores, two printing-offices, each issuing a weekly newspaper, one steam and one water saw-mill, and about 900 inhabitants. The national road extends to this place.

VANDERBURG, county, Ia. Situated in the S.W. part of the state, and contains 225 sq. m. Bounded S. by Ohio r., along which the land is fertile. Drained by Big Pigeon cr. It contained in 1840, 3021 neat cattle, 713 sheep, 7330 swine; and produced 4225 bushels of wheat, 105,729 of Indian corn, 4315 of oats, 3841 of potatoes, 335 pounds of sugar. It had one commission house in foreign trade, 49 stores, two flouring-mills, seven saw-mills, one tannery, one distillery, one brewery, two printing-offices, two weekly newspapers; seven schools, 212 scholars. Pop. 6250. Capital, Evansville.

VAN-DIEMEN'S LAND, or TASMANIA, an island belonging to Great Britain, in the S. Pacific and eastern oceans, off the S. extremity of Australia, from which it is separated by Bass's straits, between lat. 41° 30' and 43° 40' S., and long. 144° 40' and 148° 20' E. It is shaped like a heart. Area, estimated at about 27,000 sq. m. Pop. in 1838, 45,846; of whom 26,055 were free, and 18,133 convicts: the number of aboriginal inhabitants is very trifling. The country is in general hilly or mountainous. Captain Fitzroy says, "The change of scene from Sidney to Hobart-town, was as striking as a view of Gibraltar or Madeira after leaving the Downs. Comparatively speaking, near Sydney all was light-coloured and level; while in Van-Diemen's Land we almost thought ourselves in another Tierra del Fuego." (*Voyage of the Adventure*, &c.) The mountains rise to 3500 or 4000 feet, not forming continuous ranges, as in the adjacent continent, but generally isolated peaks. The surface consists alternately of elevated table lands and fertile valleys, most part of it being fit either for cultivation or pasturage. Several considerable rivers water the colony. The principal are the Derwent, and Tamar formed by the union of the N. and S. Esk, all which rise toward the centre of the island, in about lat. 42°; the first running to the S.E., and the rest northward. There are several large lakes in the interior, one of which is said to be 60 m. in circ. The coasts are very much indented, and abound with excellent harbours. The climate is comparatively healthy, being apparently more congenial to European constitutions, than that of Sydney. The winters are colder; but the country seldom suffers from those

## VAN-DIEMEN'S LAND.

long continued droughts which are the bane of New South Wales, nor from too much rain. Sandstone, limestone, and basalt, are among the principal geological rocks. Indications of coal have been met with, and iron ore has been dug up, some of which is said to yield as much as 80 per cent. of metal. Copper, lead, zinc, and manganese exist, but no mines have been hitherto wrought. The upper soil is usually sandy or argillaceous; or else consists of a rich vegetable mould. There appears to be comparatively a much larger proportion of good soil than in Australia: fine tracts of land are found quite down to the borders of the sea, a circumstance unusual in the last-named continent; and extensive tracts covered with luxuriant herbage, and free from timber or underwood, and which, consequently, require no clearing on the part of settlers previously to being ploughed, are met with in all parts of the interior. Timber, however, is by no means scarce; and in 1838, 435,832 cubic ft. were cut at Port Arthur, of which nearly three fourths were exported. The Huon and Adventure bay pines, and the black wood, are peculiar to the country; in most other respects the vegetable products, as well as the animals, are similar to those of Australia. A species of panther, which commits much havoc among the flocks, and kangaroos are found in great numbers; there is, however, no native dog. Poisonous reptiles are less numerous than in the adjacent continent. The aboriginal inhabitants appear to belong to the negro race of the E. archipelago: they seem to be sunk in the lowest depths of barbarism; and are said to be ignorant of the most useful and obvious arts, as fishing, and the construction of the rudest canoes. Their numbers have rapidly decreased since the establishment of the whites, and a few years since the greater part of those remaining in the colony were removed to Flinders's Island in Bass's straits.

The only settled portions of Van Diemen's Land stretch across the interior from the N. to the S.E. coast along the courses of the Derwent, Tamar, and other rivers. All the W. and the N.E. parts of the island are yet not merely unsettled, but even unexplored.

From 1824 to 1838 inclusive, the grants of land to settlers in the colony appear to have amounted to 1,128,000 acres, by far the greater proportion of which was in grants of 500 acres and upwards. The average price per acre in the last mentioned year was 5s. 10½d.; and the sum total that accrued to the government from the sale of land during the decennial period ending with 1838 amounted to £147,370. The plan of selling the unappropriated land by auction is now adopted in this colony, as in most others belonging to England. In 1839 the sales in this way amounted to 42,386 acres, at 10s. 1½d., exclusive of certain town lots, the sum received for the whole being £23,256; and during the same year 15,836 acres were granted by the crown in reward of military and naval services. In 1840 the sales of land amounted to 88,296 acres, at 11s. 4d., exclusive of town lots, the aggregate price of the whole being £55,305; the grants to military and naval men during the same year exceeded 9500 acres. It is estimated that there are still in the colony above 12,000,000 acres ungranted. In 1838 about 108,000 acres were said to be under crop, including about 41,760 in wheat, 13,500 do. in barley, 21,600 in oats, 3500 in potatoes, 9100 in turnips, and 17,000 or upwards in grasses. The total produce of corn during the same year was estimated at about 969,000 bushels; of which, 550,000 were wheat. If these returns may be depended on, it would seem that at an average the produce of corn per acre amounts to little more than 12 bushels! or to only about one third part of the produce of an acre of land in England! This lamentable deficiency of produce may be ascribed partly, we believe, to the backward state of agriculture, and the want of care in the preparing of the land, and partly to the inferior fertility of the latter. In fact, Van-Diemen's Land, though superior as a corn-growing country to New S. Wales, is notwithstanding better fitted for grazing than cropping. Wool, indeed, is here, as well as in Australia, the staple produce of the colony; and the increase in the breed of sheep has been so very great that the stock, which in 1828 amounted to 553,698 head, had in 1838 increased to 1,214,000 head; and while the imports of wool from Van-Diemen's Land into the United Kingdom in 1820, did not exceed 993,979 lbs., they amounted, in 1841, to 3,597,531 lbs. Maize is not raised in the colony, the climate being too cold. Apples, currants, gooseberries, &c., attain perfection, but the orange, citron, and pomegranate are not raised, and the grape and peach attain only an inferior degree of maturity.

In 1838, the stock of cattle was estimated at 75,000 head; of horses, at 9650; and goats, at 2400. All kinds of stock attain a much greater size than in the neighbourhood of Sydney. Between 1824 and 1836, there was, owing to a variety of causes, an unprecedented rise in the value of all sorts of property in the colony, particularly of land, sheep, and cattle. Land, which in 1824 would not have realized more than from 5s. to 10s. an acre, was, in 1836, sold at prices ranging from £2 to £4; and sheep and cattle, which

in the former year might have been purchased for 5s. and 40s. respectively, could not, in the latter, be procured for less than £2 and £12. (*Statist. Rep.*) But since 1836, a fall has taken place in prices, wages, &c., which, though at first productive of inconvenience, has, by putting an end to much extravagant speculation, been of decided advantage; and the colony is steadily advancing in population and prosperity. In 1838, 101 vessels of the aggregate burden of 8382 tons, belonged to Van-Diemen's Land; of these 19, of about 2000 tons burden, were employed in the whale fishery, which imported oil, &c., to the gross value of £98,660. We subjoin an

ACCOUNT of the Import and Export Trade of the Colony in 1839 and 1840.

Countries from and to which Imports and Exports were made.	Value of Imports.		Value of Exports.

The great articles of export are wool, whale oil, and whale-bone, and bark. The imports comprise every description of manufactured goods, colonial products, wines, farming utensils, &c.

The government is subordinate to that of New South Wales; but the lieutenant-governor, with the aid of the executive and legislative council, administers the local government independent of the parent colony. The executive council consists of five members, including, with the lieutenant-governor, the chief justice, colonial secretary, and treasurer, and the officer in command of the troops. The legislative council is composed of from 10 to 15 members, appointed by warrant of the sovereign; and all the above functionaries are *ex officio* members. The laws of England, and acts of the British parliament are generally administered in the colony, but special acts may be passed by the governor and council. The initiatory proceedings in the passing of all acts belong to the governor; and two thirds of the council must be present at their passing, and the majority vote with the governor, or no proposition can become law. Civil causes are tried before a judge and two assessors, and criminal cases by a jury of seven naval or military officers. In most other respects this colony is administered in a manner similar to New South Wales. Public revenue in 1838, £138,591; expenditure, £133,681. Of this expenditure £10,271 was for the public schools, in which 1380 pupils were instructed.

The settled part of Van-Diemen's Land is divided into 15 districts. Hobart town, or Hobarton, the cap., is in the district of same name, on the Derwent, about 20 m. from its mouth, lat. 42° 54' S., long. 147° 34' E. Pop. of the town and district in 1838, 14,382; of whom 3553 were convicts. The town covers about 1 sq. m.; it stands upon the declivities of two gentle hills, and is intersected by a fine stream from the heights of the Table mountain, which towers above the town on the W. to the height of 3936 ft. The streets are wide, and intersect each other at right angles; and, having been from the first laid out on a uniform plan, it is much more regularly built than Sydney. Its houses are substantial, and of two stories in height: it has some good public buildings, including a church constructed of brick, a jail, and a quay, close to which vessels of the largest burden load and unload. Hobarton possesses one of the finest harbours in the world. The Derwent, which here forms a fine sheet of water, is navigable for ships for 3 m. above the town, and continues to afford a safe passage for vessels of 50 tons as far as New Norfolk, 20 m. higher up, where a ridge of rocks abruptly puts an end to the navigation. In 1838, 72 ships, of the aggregate burden of 6079 tons, belonged to this port. The suburbs of Hobart town are increasing and receiving much embellishment; villas, enclosures, &c., are said to be springing up in every direction. The principal settlement on the N. side of the colony is Launceston, on the Tamar, about 40 m. from its mouth, and 105 m. N by W. Hobart town. The river is navigable to it for vessels of 300 tons. The other towns are insignificant.

This island was originally discovered by the navigator Tasman in 1642, and subsequently received its name in honour of a governor of the Dutch E. Indies. It was afterwards visited and partially explored by Cook, Furneaux, D'Entrecasteaux, &c.; but it was not ascertained to be an island till Bass sailed through the straits which bear his name in 1798. The first English penal settlement was established here in 1803, and down to 1813 it continued to be merely a place of transportation from New South Wales.

## VANNES.

The settlement continued to suffer from the depredations of escaped convicts, termed bush-rangers, till 1817, when these were finally put down; voluntary emigration began to take place to a considerable extent in 1831, and has since progressively increased. (*Statist. Rep. on Van-Diemen's Land, &c.*)

VANNES, a town and seaport of France, dep. Morbihan, of which it is the cap., at the bottom of the gulf of Morbihan; 63 m. W.N.W. Nantes. Lat.  $47^{\circ} 39' 26''$  N., long.,  $2^{\circ} 45' 4''$  W. Pop., in 1836, ex. comm., 9398. It was formerly fortified, and entered by six gates, five of which, with some towers, still remain. It is clustered around its cathedral, and except one or two tolerable streets is irregularly and badly built, badly paved, and dirty. The cathedral, rebuilt in the 15th century, is a massive, but heavy edifice; in its interior, however, are some good monuments and paintings. It has another church, and several chapels, one of which, attached to the communal college, is of good architecture. The prefecture is an ancient castle; and a convent has been converted into the residence of the bishop. There were formerly many monastic establishments at Vannes; but their buildings have now mostly received other destinations, and one is appropriated to the *Institution du Pere Eternel*, which, besides boarding and educating 60 poor girls, has a great many out-scholars receiving primary instruction. The edifice, now the theatre, has served at different periods for the meetings of the states of Brittany, and the parliament of Rennes. Vannes has three hospitals, a communal college, school of navigation, a Polytechnic society, established in 1826, for the culture of the arts and sciences, a public library of 8000 vols., and manufactures of coarse cloths, linen and cotton yarn, and lace. Its port is small, and the entrance being shallow, it is fit only for vessels of small burden; on one of its sides is a planted promenade, and on the other are slips for building boats and small craft. It has been supposed that Vannes occupies the site of *Dariorigum*, the cap. of the Veneti; but the better opinion seems to be that the latter was about 5 m. N. by W. Vannes, at Locmariaker, where the remains of a circus and Roman road are still extant. (*Hugo, art. Morbihan; D'Aneille, Notice de L'Ancienne Gaule*, p. 262; *Martiniere, &c.*)

VAN WERT, county, O. Situated in the W. toward the N. part of the state, and contains 432 sq. m. Drained by St. Mary's, and Little Auglaize rivers. It contained in 1840, 1724 neat cattle, 335 sheep, 3800 swine; and produced 3090 bushels of wheat, 33,306 of Indian corn, 3267 of oats, 5671 of potatoes, 3070 pounds of sugar. It had four stores, two grist-mills, two saw-mills. Pop. 1577. Capital, Van Wert.

VAR, a maritime dep. of France, reg. S.E., between lat.  $43^{\circ}$  and  $44^{\circ}$  N., and long.  $5^{\circ} 40'$  and  $7^{\circ} 15'$  E.; having W. the dep. Bouches-du-Rhone, N. the Basses-Alpes, N.E. the Sardinian states (co. Nice), from which it is separated by the river Var, and E. and S. the Mediterranean. Area, 726,866 hectares. Pop., in 1836, 321,686. The surface, particularly in the N. and E., is mostly covered with ramifications of the Alps, consisting of primitive or calcareous formations covered with a gravelly or arid soil. The dep. is, however, well watered, and on the banks of some of the rivers, as the Var and Argens, are some very fertile tracts. The Var, whence the dep. derives its name, rises in the dep. of the Basses-Alpes, about 6 m. S.E. Colmar, and, after running generally southward, falls into the Mediterranean at St. Laurent, 31 m. S.W. Nice, after a course of 68 m., for about half of which it is navigable for rafts. The Esteron and Vesoubia are its chief tributaries; no towns of much consideration are on its banks. Numerous lagoons and marshes border the coast of this dep., which is generally abrupt, rocky, and indented with numerous inlets. In 1834, the arable lands were estimated to comprise 118,052 hectares; vineyards, 67,657 do.; woods, 230,700 do.; and wastes, about 187,800 do. Agriculture is very backward, and the supply of corn is inadequate for the consumption of half the pop.; the produce in wine, olives, and fruits of various kinds is, however, considerable; and 115,494 kilogs. of silk were gathered in 1835. Capers, oranges, lemons, chestnuts, and perfumery are among the principal exports. Grasse is especially famous for its essences and liqueurs; and roses, jasmynes, &c., are grown there and elsewhere in large quantities for their manufacture. The forests comprise many cork-trees, and bottle corks are made in several places. Kermes and a little tobacco are among the other products. Few horses or cattle, but a good many mules, are bred. In 1830, there were estimated to be upwards of 270,000 sheep, and 18,000 goats in the dep., and the woods afford nourishment for numerous hogs. In 1835, of 109,560 properties subject to the *contrib. fonciere*, 42,012 were assessed at less than 5 fr., and 21,790 at from 5 to 10 fr., only 37 were assessed at 1000 fr. and upwards. Lead, coal, copper, iron, manganese, &c., are met with, though very few mines are wrought. The tunny and anchovy fisheries are of considerable importance, and coral of good quality is

## VAUCLUSE.

fished up on the coast. Manufactures of no great consequence; but silk twist, perfumery, soap, paper, and leather are produced to some extent: the dep. has, however, a considerable trade with the Sardinian states, &c. It is divided into four arronds.; chief towns, Dragignan, the cap. Toulon, Brignolles, and Grasse. It sends five members to the chamber of deputies. Registered electors in 1833-9, 1765. Total public revenue, in 1831, 9,210,327 fr. (*Hugo, art. Var; Diet. Geog.; French Official Tables.*)

VARICK, p. l., Seneca co., N. Y., 8 S. Waterloo, 186 W. Albany, 332 W. It extends from Cayuga lake on the E. to Seneca lake on the W. It has three stores; 11 schools, 615 scholars. Pop. 1971.

VARINAS, a town of Colombia, repub. Venezuela, cap. prov., on a tributary of the Apure, 300 m. S.W. Caracaa. Pop. uncertain, being variously estimated at from 6000 to 12,000. It is rather handsome, but has no public buildings worth notice. It is the principal mart for the excellent tobacco grown in its prov.; but has also a considerable trade in sugar, coffee, cotton, indigo, and cattle, which are mostly exported by way of the Apure and Orinoco. (*Codazzi; Geog. de Venezuela, &c.*)

VARNA, a fortified town and seaport of European Turkey, prov. Bulgaria, on the Black sea, at the mouth of the Pravadi, 47 m. E. Schumla; lat.  $43^{\circ} 12'$  N., long.  $27^{\circ} 54'$  E. Pop. estimated at about 16,000. Though the residence of a pacha, it is a poor town, and has only an open roadstead; but the latter, being sheltered from N.W. winds, which are the most to be feared in this sea, and the holding ground being good, it presents but little danger; and Varna is a principal *dépot* for the export of Bulgarian produce to Constantinople. The town fell into the hands of the Russians in 1828, in consequence, as is supposed, of their having bribed the governor. (*See Keppel's Journey across the Balkan*, i. 358, 359.) Agreeably to the treaty of Adrianople, its fortifications were dismantled, but they are said to have been since replaced by new defensive works. (*Diet. Geog.; Stein; &c.*)

A great battle was fought near Varna on the 10th of Nov. 1444, between the Hungarians and their allies, under their king Ladislaus, assisted by the famous John Hunyadi, and the Turks, under their sultan, Amurath II. The Christians, who had broken a truce which they had a short while before solemnly sworn to observe, suffered severely for their perfidy; their king having been killed in the battle, Hunyadi taken prisoner, and their army totally defeated with a prodigious slaughter. (*L'Art de Verifier les Dates*, 2e partie, v. 250, 8vo ed.)

VASSALBOROUGH, p. l., Kennebec co., Me., 11 N.H. Augusta, 606 W. Bounded W. by Kennebec river. By means of a dam across Kennebec river, at Augusta, and a lock at that place, vessels of considerable burthen pass from this place to the ocean. Incorporated in 1771. It has nine stores, two fulling-mills, one woollen factory, seven grist-mills, seven saw-mills, one paper-mill, six tanneries; one academy, 100 students; 22 schools, 1164 scholars. Pop. 2952.

VASTO (an. *Histonium*) a town and seaport of the Neapolitan dom., prov. Abruzzo-Citra, on the Adriatic, 31 m. S.E. Chieti. Pop., in 1830, 9016. It is walled, and has two collegiate churches, one of which is said to occupy the site of a temple of Ceres, several convents, hospitals, &c., with many good private buildings. Its inhabitants are mostly occupied in the manufacture of earthenware, in fishing, and the cultivation of olives and vines. On the 1st of April, 1816, this town was the theatre of an extraordinary catastrophe, by which it was partially destroyed by a sudden falling in and sliding of the soil, supposed to have been occasioned by the escape of subterranean water. (*Del Ré, Descrizione delle Due Sicilie*, ii. 410.)

VAUCLUSE, a dep. of France, reg. S.E., between lat.  $43^{\circ} 40'$  and  $44^{\circ} 25'$  N., and long.  $4^{\circ} 40'$  and  $5^{\circ} 45'$  E., having N. the dep. Drome, E. Basses-Alpes, S. Bouches-du-Rhone, from which it is separated by the Drance, and W. the Rhone, separating it from Gard. Area, 347,377 hectares. Pop., in 1836, 239,113. The general slope of this dep. is to the W., in which direction it is traversed by many small tributaries of the Rhone. Soil, mostly calcareous, but it is only in the neighbourhood of the larger rivers that it possesses much fertility. In 1834, the arable lands were estimated to comprise 157,738 hectares; vineyards, 28,594 do.; woods, 62,141 do.; willow plantations, &c., 2717 do.; and heaths, wastes, &c., 67,760 do. In 1835, of 81,140 properties subject to the *contrib. fonciere*, 38,304 were assessed at less than 5 fr., and only 22 at 1000 fr. and upwards. Agriculture, though still very backward, is said, of late years, to have made considerable progress. Oxen, horses, or mules are used indifferently for the plough; but the last are principally employed. The scarcity of other manure obliges the farmers to cut the wild box on the hills, which, being macerated and suffered to rot, is used for the purpose, and found peculiarly suitable for manuring vines. Wine and

silk are among the most important products of the dep.: the produce of wine may, perhaps, be estimated at about 500,000 hectolitres, of which a considerable portion is exported. The best wines are those of *Coteau-brûlé*, near Avignon, and of *Châteauneuf*, 4½ leagues from Orange. Speaking generally, however, too little attention is paid to the culture and care of the vine. *On en compterait*, says Julien, *beaucoup plus de bons vins, si les propriétaires appartaient plus de soin dans le choix des plantes et dans la culture.* (p. 266.) In 1835, upwards of 1,600,000 kilogram of raw silk were gathered. The produce of wheat is insufficient for home consumption, but a good deal of rye, and some malze, barley, buckwheat, potatoes, &c., are grown, besides saffron, madder, and coriander and anise seeds. Almonds and other fruits, and essence of lavender are among the exports. Artificial grasses are sown; but the pasture lands are not extensive, and the quantity of stock is less than in any other of the S. depts. Bees are pretty numerous; the honey is of good quality; and about 60,000 kilogram of wax are supposed to be exported annually. This dep. does not appear to be rich in metals; but building stone of good quality, lime, potters' clay, &c., are plentiful. Silk fabrics are made at Avignon and Orange; and the town of Apt is famous, in the S. of France, for its earthenware and confectionery, as is Avignon for its printing establishments, and manufactures of printing types, bells, and other metallic goods. Copper, lead, and iron plates, prepared madder, woolen stuffs, leather, paper, cordage, linen thread, glass wares, and tiles are made in this dep., which has also many distilleries and dyeing-houses. Vauluse is subdivided into four arrondissements: chief towns, Avignon, the cap, Apt, Carpentras and Orange. It sends four members to the chamber of deputies. Registered electors, in 1838-39, 1232. Total public revenue (1831), 5,482,148 fr. (*Hugo, art. Vauluse; Dict. Géog.; French Official Tables.*)

VAUCLUSE, a famous fountain in the above dep., close by the small village of the same name, 4 m. W. Isle, and 15 m. W. by N. Apt. This fountain has its source in a vast cavern at the foot of a rock 300 feet in height at the bottom of a narrow gorge in the mountains. Within this cavern is a deep basin of the purest water, the surface of which appears to be perfectly smooth and placid, but which, notwithstanding, emits so great a quantity of water as to give birth to the small river Sorgues, an affluent of the Rhone. After the melting of snows, or the occurrence of long-continued rains, the flow of water is greatly increased; but even in the driest seasons it is astonishingly copious. In ordinary states of the fountain the water escapes by percolating through the rocks, stones, and gravel, that form the outward side of the abyss; whereas during floods it overflows its banks. It is possible, taking proper precautions, to descend, when the water is low, to its edge. Owing to its great depth it appears as if it were jet black, though, as already stated, it is limpid in the extreme.

This fountain is celebrated in the history of Petrarch. An old castle near the village, which belonged to his friend the bishop of Cavaillon, was frequently visited by Petrarch, and is thence called his castle. The poet, however, lived in the village. He here frequently saw Laura, who is generally supposed to have been the wife of the Count de la Sade, the lord of the village. But this is doubtful, as well as the Platonism of her lover. (*Hugo, art. Vauluse, &c.*)

VAUD (Fr. *Pays de Vaud*, Germ. *Waadt*), a canton of Switzerland, holding the 19th rank in the confed., between lat. 49° and 47° N., and long. 6° and 7° 12' E., having N. the cant. and lake of Neuchâtel, E. the Friburg and the Bernese Oberland, S. the Valais, Savoy, and the lake and territory of Geneva, and W. the dep. of Jura in France. Area, about 1180 sq. m. Pop., in 1837, 180,582; all Protestants, except about 3000 Rom. Catholics. Both the S.E. and N.W. extremities of this canton are mountainous; the former quarter is covered by ramifications of the Alps, one summit of which, the Diablerets, rises to 11,120 ft. above the level of the sea; the latter region is traversed by ranges of the Jura. The middle of the canton, between the Jura mountains and the lakes of Geneva and Neuchâtel, is a rich undulating country, and so celebrated for its agreeable character and picturesque beauty, that it has long been resorted to by visitors from many parts of Europe; in 1837, 14,500 of its inhabitants were citizens of other cantons, and nearly 4000 foreigners! The raising of corn and wine is the occupation of the population. The vineyards, reckoned the best in Switzerland, are supposed to comprise about 13,000 acres, and to employ 20,000 vine-dressers, independently of women and children. The wines of La Vaux and La Côte, both grown on the shores of lake Lemman, are the best: the first is produced near Vevay, where the Romans, who erected a temple to Bacchus at Culiy, are supposed to have originally planted the vine. A society of high antiquity in that town exercises a survey of the vineyards in the district, and celebrates a remarkable fête, attended by a great concourse of strangers, every 15th or 30th year. The num-

ber of cattle in Vaud has of late increased very much: in 1830, it was supposed to have about 75,000 head of cattle, 23,500 horses, and 77,000 sheep; and the improvement in the breeds is said to have kept pace with the increase of numbers. Almost the only salt springs in Switzerland exist at Bex in this cant. They were discovered in the 16th, and bought by the government of Bern in the succeeding century; in 1834, they produced a revenue of 18,439 Sw. francs. Marble, coal, crystal, sulphur, petroleum, and a few metallic products, are met with, though not raised in any large quantities. Manufactures are very unimportant, and mostly confined to those of leather and yarn. The transit trade from France into Switzerland and Germany is of more consequence to the inhabitants.

Vaud is subdivided into 19 districts and 60 circles; all the towns of more than 3000 inhabitants forming a separate circle. Its constitution is more aristocratic than that of most of the other Swiss cantons.

The legislative power is vested in a *grand council* of 184 members elected for five years, which meets yearly in May at Lausanne. The electors include a certain portion of those among the citizens who are taxed to the highest amount (*du nombre des trois quarts des citoyens le plus imposés à l'impôt foncier*), and must be neither domestic servants, recipients of public relief, bankrupt, nor under penal condemnation. Each circle sends one deputy to the grand council, who must be an inhabitant of the circle, 30 years of age, and possess property in the canton of the value of 2500 fr., or some equivalent thereto; the town of Lausanne sends four deputies; four candidates are also nominated by each of the circles, and from among the general list of the members already chosen elect 63 other members. Finally, an electoral commission, composed of the members of the executive body, of the court of appeal, and 40 members of the legislative council, chooses the remaining members, electing 36 from among the cantonal citizens 40 years of age and possessors of landed property to the value of 10,000 fr., and 18 above 25 years of age without property qualification. (*Picot.*) The legislature chooses the executive council, which consists of nine members, and has the initiative in all propositions of laws and taxation. Each district has a court of primary jurisdiction, and each circle a justice of the peace. The inhabitants understand and speak French; but their common *patois* is a dialect somewhat similar to the Romansche. Schools are pretty general, and in 1834 it was estimated that one in six of the population was receiving public instruction. Public revenue, in 1834, 1,276,977 fr.; expenditure, 1,115,665 do.

This territory nearly corresponds to the *Pagus Urbigenus* of Cæsar. It successively belonged to the Burgundian and Frankish kingdoms, the Germanic empire, and the dukes of Zahringen. From 1273 to 1536 it was possessed by Savoy; and by the government of Bern from the latter year till 1795, when it was erected into the canton of Lemman. It reassumed its present name in 1803. It furnishes 2964 men to the army, and 59,273 fr. a year to the treasury of the Swiss confederacy. (*Picot, Statist. de la Suisse; Ebel; Boering's Rep. on Switzerland.*)

VELEZ-MÁLAGA (an. *Menola*), a town of Spain, in Andalusia, prov. Malaga, cap. distr. on the Velez, near its mouth, and 14 m. E.N.E. Malaga. Pop., with its vicinity, according to Miñano, and 14,000. "The town is slightly elevated above and on the left bank of the stream, and is commanded by the neighbouring hills. The streets are wide, clean, and well paved; but the thriving commerce, and abundant market naturally looked for in a place once so noted for the productiveness of its orchards and extent of its export trade, are no longer to be seen." (*Scott's Ronda and Granada*, i. 219.) Under the Moors, Velez was a place of considerable strength, and had a castle, now in ruins. It has two parish churches, six convents, several workhouses, a prison, public granary, &c., and some fine public promenades. It is said to be peculiarly well situated; its climate is not oppressively hot, the town being sheltered by the neighbouring heights; and its neighbourhood is very fertile, producing sugar, coffee, cotton, cochineal, large quantities of wine, silk, various fruits, the sweet potato, &c. It has some sugar-mills, and manufactures of hats, soap, brandy, &c. It was taken from the Moors in 1487, the siege having been conducted by Ferdinand in person. (*Miñano; Townsend; Scott; &c.*)

VELETTE (an. *Velitri*), a town of S. Italy, Papal States, Comarca di Roma, near the Appian Way, 20 m. S.E. Rome. Pop. about 10,000. It stands on a commanding eminence at the foot of mount Artemisio, and enjoys an extensive view of the Pontine Marshes, as far as Monte Circeio, and of the sea, with the range of the mountains of Norba, Cora, and Segni, and even those beyond Palestrina. It is surrounded by ruined walls, with decayed towers, and ruinous curtains, and is but indifferently built. It has a town-hall by Bramante, and some fine palaces. The principal square has a fine fountain, and a bronze statue of

## VELLORE.

Pope Clemen VIII. The Borgian museum, now in Naples, was originally established in the Borgian palace, in this town. The inhabitants are mostly peasants, who work in the neighbouring fields and vineyards, and at night retire to the town, the air of which is extremely good. According to Simond, the inhabitants are "not quite so ragged as their neighbours, although the place is full of dirty, and the inn as miserable." *Vellitra* appears to have been one of the most considerable cities of the Volsci, and is said by Dionysius to have been fortified by Coriolanus. It was the residence of the Octavian family before they settled in Rome; and is celebrated as the birth-place of Augustus, who was born here on the 23d September, anno 63 B.C., in the consulship of Cicero. (*Rampoldi; Gell's Topography of Rome, &c., ii. 340, &c.*)

VELLORE, a town and fortress of British India, presid. Madras, distr. Arcot, 80 m.-W. by S. Madras. The fortress, which is of considerable extent, comprises spacious barracks and other necessary accommodations for a garrison, with various handsome buildings round a square, on one side of which is a curious pagoda, now used as a magazine. The native town, which is also large and populous, is situated to the S. of the fort, with which it is connected by additional battlements. In 1677 it was taken by Sevajee; and, during the war of 1782, was relieved by Sir Eyre Coote, in the face of Hyder's army. After the capture of Seringapatnam, Tippos's family was removed thither. In 1806 a formidable revolt of the native troops, followed by a massacre of the Europeans, took place here, of which Tippos's family were supposed to have been the instigators. This occasioned the removal of the latter to Calcutta. (*Hamil-ton's E. I. Gazetteer.*)

VENANGO, Pa. Situated toward the N.W. part of the state, and contains 1120 sq. m. Drained by Alleghany river and its branches. Organized in 1805. It contained in 1840, 16,070 neat cattle, 28,775 sheep, 24,512 swine; and produced 128,486 bushels of wheat, 70,068 of rye, 59,730 of Indian corn, 52,114 of buckwheat, 214,157 of oats, 118,719 of potatoes, 17,561 pounds of sugar. It had 43 stores, seven fulling-mills, three woollen-factories, 16 furnaces, one forge, 49 grist-mills, 59 saw-mills, two oil-mills, 17 tanneries, four distilleries, three potteries, one printing-office, one weekly newspaper; one academy, 20 students; 35 schools, 949 scholars. Pop. 17,900. Capital, Franklin.

VENANGO, t. Crawford co., Pa. It has three stores, one flouring-mill, six saw-mills, one tannery, one pottery. Pop. 1299.

VENDEE (LA), a maritime dep. of France, reg. W., formerly included in the prov. of Poitou, and, exclusive of the islands Dieu and Noirmoutiers, extending between the 46th and 47th degrees of N. lat., long. 0° 35' and 2° 10' W.; having N., Loire-Inférieure and Maine-et-Loire; E., Deux-Sèvres; S., Charente-Inférieure; and S.W. and W. the Atlantic. Area, 781,700 hectares. Pop., in 1836, 330,350. No portion of the surface is much elevated; the E. part of the dep. is undulating, though nowhere rising to the height of 500 ft. The principal rivers are the Sèvre-Nantaise and Nioraise, Antise, Vendée, Lay, Yon, and Vic. The Vendée rises in the department Deux-Sèvres, runs generally in a S.W. direction, and joins the Sèvres-Nioraise, after a course of about 16 leagues, only a small portion of which is navigable. Fontenay is the only town of consequence on its banks. The department is subdivided into three districts: the marshes, the plain country, and the *bocage*. The marshes extend principally along the coast; the *bocage*, so called from the wood sprinkled over it, occupies the centre and upper parts of La Vendée; and the plain country, a great part of which is very fertile, comprises the rest of the surface. In 1834, the arable lands were estimated to comprise 408,565 hectares; pastures, 109,896 do.; vineyards, 17,700 do.; and woods, 29,600 do. Agriculture is conducted in much the same way as in the adjacent department of Loire-Inférieure (which see). Leases run from three to seven years. Few of the farms are let for money; but the rent, paid in produce, may be equivalent for corn land to 26 fr.; for vineyards, 24 fr.; and for meadow lands, 40 fr. an acre. In the plains the ground is left idle the second year, as in Loire-Inférieure.

"The whole of this department, as well as that of the Loire-Inférieure is, with a very few exceptions, most miserably farmed. The farmers are without capital, and badly provided with implements, and have not half the number of labourers required for the land; the fields are always full of weeds, for the roots are left entire by the bad ploughs in use, and from the want of hands to pluck them out." (*Parl. Rep. on Agriculture, 1834.*) A greater quantity of wheat is grown than in any other of the W. departments; and, next to it, barley is the grain principally cultivated. Flax and hemp are grown to a considerable extent in the marshy tracts. A large quantity of wine, principally white, is produced; but, according to Julien, it is *d'une qualité très-médiocre, et en général vert, plat et sujet à tourner à la*

## VENICE.

*graisse dès la première année.* (p. 147.) This inferiority is ascribed to the circumstance of the cultivators being more anxious to increase the quantity than to improve the quality of their wines. Throughout a great part of the department, estates are usually divided into farms of from 45 to 90 acres; and in the plain country few farms of this size have fewer than 60 or 80 sheep. The annual produce of wool is estimated by Hugo at 600,000 kilogr. Oxen are sold from the plain to the bocage farmers, who fatten a good deal of stock. In some places mules are used for ploughing; they are brought from Deux-Sèvres when young, and after having been worked lightly for four or five years, are sold to merchants for the Spanish market. (*Rep. on Agriculture.*) In 1835, of 124,113 properties subject to the *contrib. foncière*, 69,944 were assessed at less than 5 fr., and 17,027 at from 5 to 10 fr. (*Official Tables.*) A little lead and antimony, with some iron and coal are obtained; but the department is not rich in mineral products. Pilchards are taken on the coast, and the inhabitants of Sables d'Olonne are interested in the Newfoundland fishery. Manufactures few; being principally of hats and woollen stuffs, for home consumption. La Vendée is divided into three arrondissements: chief towns, Bourbon, Vendée, Fontenay, and Sables d'Olonne. It sends five members to the chamber of deputies. Registered electors in 1838-39, 1477. Total public revenue, in 1831, 6,671,303 fr. This department is distinguished for the chivalrous and obstinate stand made by its inhabitants during the progress of the French revolution, in favour of the rights or pretensions of the Bourbons. In this, no doubt they were a good deal assisted by the nature of the country; but their gallantry and their sacrifices were alike remarkable, and were worthy of a better cause. (*Hugo, art. La Vendée; Dict. Géog.; French Official Tables.*)

VENDOME, a town of France, dep. Loir-et-Cher, cap. arrond.; on the Loir, 20 m. N.W. Blois. Pop., in 1836, ex. comm., 7030. It is well built, clean, and handsome. The remains of an ancient castle, the communal college, cavalry barracks, theatre and public library, are the objects most worthy of notice. It has manufactures of kid gloves, cotton cloths, hosiery, yarn, paper, and leather.

VENEZUELA, see COLOMBIA.

VENICE (Ital. *Venezia*), a famous maritime city of Austrian Italy, formerly the cap. of the republic of the same name, and now of E. Lombardy, on a cluster of numerous small islands, in a shallow, but extensive lagoon, about 4 m. from the mainland, in the N.W. portion of the Adriatic, 75 m. W. by S. Trieste; lat. 45° 25' 53" N., long. 12° 20' 31" E. Pop., in 1837, 97,156. The appearance of Venice, from whatever side she may be approached, is striking and singular in the extreme. Owing to the lowness of the islands on which she is built, she seems to float upon the sea,

"From out the wave her structures rise,  
As from the stroke of the enchanter's wand."

She is divided into two principal portions, of nearly equal size, by the Grand canal (*Il Canale Maggiore*), a serpentine channel, varying from about 100 to 180 ft. in width, crossed by the principal bridge of the city, the celebrated *Rialto*. The various islands, which form the foundations of these two grand divisions, are connected by numerous bridges, which, being very steep, and intended only for foot passengers, are cut into steps on either side. The canals, or *rii*, crossed by these bridges, intersect every part of the town, and form the "water-streets" of Venice; by far the greater part of the intercourse of the city being carried on by their means in gondolas or barges.

But, besides the canals, Venice is everywhere traversed by streets, or rather passages (*calie*), bearing a striking resemblance to Cranbourn-alley; and so very narrow, as to be in general only four, and seldom more than five or six ft. in width! The only exception is the *Merceria*, a street in the centre of the city, lined on each side with handsome shops; but even this, which may be regarded as the Portland-place, or Regent-street of Venice, is only from 12 to 20 ft. across! To ride in a carriage, or on horseback, is here wholly out of the question. The streets, or lanes, are consequently not paved with round stones, or blocks, but with flags, or marble slabs, having small sewers for carrying off the filth. Almost all the principal houses have on one side a canal, and on the other a lane, or *calie*. The former, however, is the grand thoroughfare; and gondolas, or canal boats, are here the universal substitute for carriages and horses. They are generally long, narrow, light vessels, and, though rowed only by a single gondolier with one oar, cut their way through the water with extraordinary velocity. A sumptuary law of the old regime directed that the gondolas should all be painted black. In the middle is an apartment fitted with glass windows, blinds, cushions, &c., for the accommodation of four persons. Some of the gondolas, belonging to private families, are magnificently fitted up. The charge for a gondola is about 10s. an hour and with it you may soon visit every part of the city.

## VENICE.

In many parts there are small squares, or *campi*, in which are usually cisterns, for the careful preservation of rain water; but the only open space of any magnitude is the piazza of St. Mark, with the piazzette leading to it, and forming the state entrance to Venice from the sea. "The piazzetta is at right angles with the great square, branching off in a line with the church of St. Mark. On one side, and turning a side front to the port, is the old palace of the doges; on the other side are the *zecca* or mint, and the library of St. Mark, the regular architecture, and fresh and modern appearance of which seems to mock the fallen majesty of their antique neighbours. On the sea shore, which forms the fourth side of the piazzetta, stand two magnificent granite columns, each of a single block; one crowned with the winged lion of St. Mark, in bronze, and the other bearing the statue of St. Theodore. Between these two columns, in former times, public executions took place." (*Conder's Italy*.) The piazza of St. Mark is an oblong area, about 800 ft. by 350, flagged over. Two of its sides consist of regular buildings with deep arcades. Each side is itself uniform, though not similar to the other. On the N. is the *Procuratorie Vecchie*; on the S., the *Procuratorie Nuove*. The W. side was formerly occupied by the church of St. Gemidiani; but this was taken down by the French, who erected in its stead the staircase of the new Imperial palace. At the opposite end are the cathedral of St. Mark, the Orologio, and the Campanile; and in front of the cathedral are three tall poles, supported on handsome bases of bronze, whence the flags of the Morea, Crete, and Cyprus were formerly displayed. From being the only piece of open ground in Venice of any consequence, this square is almost constantly thronged with company, and it is the scene of all the public masquerades, festivals, &c., that take place in the city. 1

Venice has a vast number of fine private palaces by Sansovino, Palladio, &c.; but many of its public buildings are more remarkable for gorgeousness and display, than for purity and taste. They present generally a heterogeneous intermixture of Byzantine, or other eastern, with Greek, Roman, and Gothic architecture. The celebrated church of St. Mark is not Gothic, Saracenic, or Roman, but a mixture of all those styles: neither a church nor a mosque, but something between the two; too low for grandeur, too heavy for beauty, no just proportion being preserved among the different parts. Yet it has the effect of grandeur, and a sort of beauty, from the richness of the materials, and the profusion of ornament. The original church was founded in 829; but the present edifice, was founded in 977, under the direction of architects from Constantinople. The nave is 245 feet in length, the transept 201 feet; the middle dome is internally 90 feet in height, and the four other domes 80 feet each. The front is 170 feet in width and 72 feet in height, without its surmounting figures. In its lower part are five recessed doorways, each adorned with two stories of little columns, though these are mostly ill proportioned, and their capitals nearly all different. Over these arches is a gallery or balcony of marble, in the centre of which are the famous bronze horses, most probably of Chian origin, and carried to Constantinople by Theodosius, whence they were conveyed away by the Venetians, when they took and plundered the capital of the eastern empire, in 1206. For 18 years, or from 1797 to 1815, they crowned the triumphal arch in the *Place du Carrousel* in Paris; but, though restored, we may well inquire,

"Is not Doria's menace come to pass?

Are they not bridled?"

(*Childe Harold*, cant. iv., st. 13, and note.)

Immediately behind the horses is a large circular window, on either side of which an arched doorway opens upon the balcony. The front terminates in pointed arches, surmounted by a crowd of spires, pinnacles, statues, crosses, &c. The finishings are in the style of the Italian Gothic of the 15th century, but overcharged and heavy. Forsyth, speaking of this edifice, says, "Nowhere have I seen so many columns crowded into so small a space. Nearly 300 are stuck on the pillars of the front, and 300 more on the balustrade above. A like profusion prevails in the interior, which is heavy, dark, and barbarous." But, from Mr. Wood's account, it would appear that the same barbarous taste that prevails in the exterior, is not so obtrusive within. "The vaulting and great part of the walls are covered with mosaics, and the rest with rich marbles. The columns of porphyry, verd-antique, &c.; the pavement of minute pieces of white and coloured marbles, jasper, agate, lapis lazuli, &c., variously, and for the most part, beautifully, disposed; the inlaid ornaments and gilded capitals produce a degree of astonishment and admiration in the mind of the spectator." (*Letters of an Architect*, l. 260.) The Orologio, or clock-tower, on the N. side of the cathedral, has little to recommend it; and the campanile is merely a large square tower, upwards of 300 feet in height, terminated by a pyramid. It, however, Galileo made many of his astronomi-

cal observations. The *loggia* around its base, now converted into a lottery-office, is a beautiful building of the Corinthian order, from the designs of Sansovino. The *Procuratorie Nuove*, now the royal palace, is a rich line of building, fronted with all the different Greek orders.

The ducal palace was originally founded in the 9th century, but the present edifice dates only from the middle of the 14th, when it was erected by the doge Marino Faliero. Externally it presents a double range of arches, supporting a great wall of brickwork, pierced with a few windows. The corners are cut to admit thin spiral columns. Notwithstanding its many defects, this structure derives an imposing effect from its grandeur of dimensions, and unity of design. The palace is entered by eight gates, the principal leading into the *cortile*, which is surrounded on three sides by two stories of arcades. One side is richly ornamented, though the whole be in bad taste. A noble flight of steps, called, from the colossal statues of Mars and Neptune, by Sansovino, the Giants' Staircase, leads up from the *cortile* to the open arcade, where, under the republic, the lions' mouths gaped to receive communications or surmises of plots against the state! From this exterior corridor the state apartments are entered. The walls of the *Sala dei Quattro Porte* are covered with paintings by Tintoretto, Vicentino, and Titian. The hall of the Great Council, *Sala del Gran Consiglio*, 153 feet in length, is now principally appropriated to the library, of which Petrarch was one of the founders; but it is also rich in frescoes, by Bassano, &c., and contains a fine collection of ancient sculpture, the portraits of the Venetian doges, &c. The *Sala dei Pregadi*, and numerous other apartments, are richly gilt, and exhibit all the glories of the Venetian school of painting, "which spreads over the walls and covers the ceilings, as if it had only cost a few shillings the square yard." In the hall of the Council of Ten, converted by Napoleon into the chamber of a court of session, the ceilings have been painted by Paul Veronese; and on every side the eye rests on pictorial representations of the achievements and glories of the republic. In the lower parts of the palace are the former tribunals and dungeons of the state inquisition, from which a passage leads across the *Ponte de Sospiri*, or Bridge of Sighs, to a door now walled up, but which formerly opened into a chamber where prisoners were despatched.

Next to the buildings in the neighbourhood of St. Mark's, those bordering the harbour and the canal of Giudecca appear to be the finest, including the Dogana of custom-house, the church of La Salute, and those of San Giorgio and Il Redemptore, both designed by Palladio. These last were on the point of being pulled down by the French, and only saved by being redeemed for a large sum of money. The Redemptore, Forsyth says, is admirable both in plan and elevation, and its interior is perhaps perfect in its proportions, simple, grand, and harmonious. It is, in fact, one of Palladio's *chef d'œuvres*, and is, perhaps, the finest church in Italy, though inferior to a great many in costliness and magnitude. Besides a Greek church and seven synagogues, Venice has altogether about 100 Roman Catholic churches, which are, on the whole, among its best buildings. There were formerly many more; but the French pulled them down, with a number of convents, in pursuance of their plans for the improvement of the city. Several of the churches date from the middle ages, though few of them are worth especial notice. One, however, is interesting, from its containing the remains of one of the greatest painters and of one of the greatest sculptors that Italy has produced—Titian and Canova: the grave of the former is marked by a short inscription on a plain stone let into the pavement. Canova has a fine pyramidal monument from one of his own designs, the expense of which was defrayed by contributions collected in all parts of Europe. The famous painter, Paul Veronese, is buried in the church of St. Sebastian, where he has a monument. The bellries of all the churches are detached, and appear to be built on the model of St. Mark's.

The general cemetery or burying place for the city is on the island of San Cristoforo di Murano. Here, rich and poor, the noble and the beggar, are all interred, the expenses of the burial of the latter being defrayed by government. This cemetery was formed, and the plan of conveying all dead bodies to it from the city enforced, by the French; and, happily, it has since been continued. A gondola, moored to the island, is appropriated to the transmission of corpses. The Jews have their burying-ground at Malomocco.

For a lengthened period after the foundation of the city, the communication between its E. and W. divisions, across the grand canal, was effected by ferry boats. A wooden bridge was subsequently established; and this having fallen to decay, it was determined to replace it by one of marble from the designs of Antonio da Ponte. The building of the Rialto was commenced in 1588; but, though it consists of a fine elliptic arch, neither its beauty nor its magnitude cor-

## VENICE.

responds with its fame and the attention it has excited. Its arch is 89 feet in span. The roadway of the bridge is divided into three parts, viz., a narrow street in the middle, with shops on each side, and two still narrower streets between the shops and the balustrades. The shops disfigure the bridge, and make it look heavy. It is lofty in the middle, and is ascended, like the other bridges, by long flights of steps at either end. The view from the summit, along the grand canal, frequently presents a very animated scene, and is one of the finest in Venice.

The palaces of Venice, built, like those of Amsterdam, on piles, are massive structures; but, except such as have been built by Palladio, Sansovino, Sannicchiele, Longhena, Scamozzi, and a few other architects of eminence, they are mostly deficient in good taste. They in general exhibit too many orders in front. Venice, in truth, is more attractive from its singularities than its architectural elegance. Yet it is still highly interesting to the student of architecture, who may here "trace the gradation from the solid masses and round arches, the only remains of the ancient grand style in the 6th, 7th, 8th, and 9th centuries, through the fanciful forms and grotesque embellishments of the middle ages, to its revival and re-establishment in later times." (*Eustace, Classical Tour*, i., 167.) Many, however, of the old patrician mansions are deserted, and not a few of them have been pulled down. Necessity, too, has, in many instances, obliged their owners to part with the fine works of art, with which they were formerly embellished. Still, however, some of the palaces have yet to boast of good collections of pictures, statues, &c. The Manfrini palace has a splendid gallery of pictures; and the Palazzo Barberigo has some fine works by Titian. The Grimani palace contains the only extant statue of Marcus Agrippa, a fine bust of Caracalla, &c.; and in the Pisani palace is Dædalus fixing wings on his son, the first group executed by Canova.

But, notwithstanding their magnitude and imposing external appearance, the rooms inhabited by the family, in the greater number of the palaces which are still occupied, are often small, ill furnished, and uncomfortable. Personal accommodation and the enjoyment of good air have been sacrificed, that space might be found for the exhibition of statues, pictures, and other works of art. All the larger houses, or palazzi, are from three to four stories in height, being generally of a square form, with an inside court containing a cistern, in which the rainwater is carefully collected. As already stated, they have, for the most part, two entrances—the principal opening on a canal, and the other on a street or alley. Some of the finest palaces are built wholly of marble. The grand canal has on each side many such buildings.

The houses occupied by the middle and lower classes are built of brick, and are in general covered with wood. Few of them have arcades, but they are mostly provided with balconies. From the extreme narrowness of the streets, the houses are usually gloomy; and are miserably deficient in the appropriate distribution of their different parts, and in all those conveniences and adaptation to comfort that distinguish houses in this country.

The arsenal, which opens upon the port not far from St. Mark's, together with the dockyard, occupies an island between 2 and 3 m. in circuit, and is defended by lofty turreted walls. The entrance is guarded by two towers flanking a gateway, over which the winged lion still frowns defiance; and in front of this entrance are four lions, brought from the Pyreus: two being of very fine proportions, and probably of Pentelic marble. The magazines and docks are kept in good order, and ship building is one of the chief branches of industry at Venice. Besides the armory, magazines, forges, foundries, and other necessary establishments, here is a rope-house, 1000 feet in length. One of the walls of the armory has a statue of Pisani, famous for his contests with the Genoese, and a beautiful monument by Canova, representing Fame crowning the Venetian admiral, Angelo Emo.

During the times of the republic the Bucintaur was the great lion of the arsenal. This was the state barge, in which the doge, accompanied by a splendid cortège, proceeded to espouse the Adriatic. The ceremony was performed by the doge dropping a ring of no great value into the sea, pronouncing at the same time the words *Desponsamus te, Mare, in signum veri perpetueque dominii*. In these days, however,

"The spouseless Adriatic mourns her lord,  
And annual marriage now no more renewed."

Byron adds that the Bucintaur "lies rotting, unrestored," but, in fact, she was burned by the French soon after the downfall of the republic.

Venice has six theatres, the largest of which may contain 2500 spectators: the Venetian drama is, however, in a very low state. The Dogana, the old exchange, is a fantastic edifice of the 17th century; and the new prison, built by

Antonio da Ponte in 1589, is much too handsome for its purpose, being an elegant Doric edifice. The bishop's palace and seminary, the various hospitals and barracks, are among the other principal edifices. A flourishing academy of the fine arts, four schools of music, and a public school for each corporation of tradesmen, are among the principal institutions for education. "Venice holds a prominent place in Italy for its charitable institutions. There is one house within the city in which 700 poor people are lodged, and many more have free lodgings and receive pecuniary assistance out of the establishment. There is an orphan house for about 335 children; an infirmary for 36 women; a wealthy institution for the reception of penitent women; a hospital, capable of receiving 1000 patients; a house of education for 90 young girls; a foundling hospital, &c.; and the yearly revenues, chiefly arising from endowments, amount to about 580,000 florins." (*Von Raumer's Italy*, i., 86.)

Venice has been represented as a delightful residence; but though it may be, and perhaps is, an aquatic paradise to the amphibious bipeds born within the sound of St. Mark's bells, it is very different to a stranger. At first, no doubt, it surprises and gratifies by its novelty; but it soon becomes tiresome from its sameness, the incessant recourse to boats, the narrowness of the streets, the want of room, the absence of all rural beauty, and the constant sense of imprisonment. It would not, in fact, be habitable were the water fresh; but the saltiness of the water, and the flux and reflux of the tide, make it tolerably salubrious. The latter phenomena, however, which are at all times much less sensible in the Mediterranean than on the British shores, are in summer so inconsiderable, that the canals become stagnant, offensive, and unhealthy. The characteristics of the climate are, a summer much hotter than in England, accompanied with occasional visits of the *acirosso*; a winter, not of great length, but sharp, particularly during the prevalence of the N.W. wind, which blows across the interior of Switzerland and the Alps. Rains are frequent, particularly in spring; and, there being no springs or wells, the inhabitants, as already stated, supply themselves with water collected in cisterns, from the tops of the houses.

It should, however, be observed, that the Venetians are no longer wholly without trees and flowers; very extensive gardens, with a fine street leading to them, were constructed by the French, and are a noble monument of their taste and munificence. "These gardens," says Mr. Pennington, "excite interest from the mode in which they were formed, more than from their beauty; not that they are deficient in taste or variety. They were formed with immense labour by the introduction of artificial earth, brought at an immense expense from *terra-firma*, and no expense was spared in their completion. There are several serpentine walks over mounts, many trees and shrubs thriving very fast; and all this, with the different views of the lagoon, the many islands interspersed, and Venice, make this promenade both agreeable and interesting. The gardens are nearly 2 m. round, and are connected by a handsome bridge." (*Tour*, ii., 225.)

*Port*.—The islands on which Venice is built lie within a line of long, low, narrow islands, running N. and S., and enclosing what is termed the lagoon, or shallows, that surround the city, and separate it from the main land. The principal entrance from the sea to the lagoon is at Malamocco, about 1½ leagues S. from the city; but there are other, though less frequented, entrances, both to the S. and the N. of the latter. There is a bar outside Malamocco, on which there are not more than 10 feet at high water at spring tides; but there is a channel between the western point of the bar and the village of San Pietro, which has 16 feet water at springs, and 14 at neaps. Merchant vessels usually moor off the ducal palace; but sometimes they come into the grand canal which intersects the city, and sometimes they moor in the wider channel of the Giudecca. Vessels coming from the S. for the most part make Pirano or Rovigno on the coast of Istria, where they take on board pilots, who carry them to the bar opposite to Malamocco. On arriving at the bar, ships are conducted across it and into port by pilots, whose duty it is to meet them outside, or on the bar, and of whose services they must avail themselves.

The chain of low, narrow islands which bounds the lagoon on the side next the sea being, in part, broken, the republic constructed, during last century, a mole several miles in length, to fill up the gaps in question, and protect the city and port from the storms and swells of the Adriatic. This vast work, formed of blocks of Istrian stone resembling marble, connects various little islands and towns, and is admirable alike for its magnitude, solidity, and utility. It bears the following inscription:

"Ut sacra æstuaria, urbis et libertatis sedes, perpetuum  
conserverentur, colossæas moles ex solido marmore contra mars

## VENICE.

*posuere curatores aquarum. Anno salutis, 1751: ab urbe condita, 1330.*"

**Money.**—Formerly there were various methods of accounting here; but now accounts are kept in Austrian lire, divided into centesimi, or 100th parts. The lira is worth about 8d.

**Weights and Measures.**—The commercial weights are here, as at Genoa, of two sorts; the *peso sottile* and the *peso grosso*. The French kilogramme, called the *libra italiana*, is also sometimes introduced. 100 lbs. *peso grosso* = 105-136 lbs. *avoldupois*, and 100 lbs. *peso sottile* = 66-428 lbs. *avoldupois*. The *moggio*, or measure for corn = 9 Winch. bushels. The measure for wine, *anfora*, contains 137 English wine gallons. The foot of Venice = 13-63 English inches.

**The Old Bank of Venice** was founded so far back as 1171, being the most ancient establishment of the kind in Europe. It was a bank of deposit; and such was the estimation in which it was held, that its paper continued to bear an agio as compared with coin down to 1797, when the bank fell with the government by which it had been guaranteed. At present there are no corporate banking establishments in the city; and no bank notes are in circulation. There are, however, several private banking houses, which buy, sell, and discount bills; and make advances on land and other securities. They are under no legal regulations of any sort, except formally declaring the amount of their capital to the authorities when they commence business. The legal and usual rate of interest and discount is 6 per cent. It is not the practice to allow interest on deposits. Bills on London are usually drawn at three months, and on Trieste at one month.

**Morals and Manners.**—Most travellers have been accustomed to represent Venice as distinguished by a peculiar profligacy of morals. It may be doubted, however, whether she be entitled to any peculiar pre-eminence in this respect over most of the other great cities of Italy; and the loss of her commerce and of that wealth which the expenditure of government brought into the city, has reduced alike the means of, and incentives to, corruption. It is now, we believe, pretty generally acknowledged that the impressions made on foreigners during the carnival season were in a great degree exaggerated; and that much of what they took for intrigue and profligacy, was no more than what the license of the period, and the universal use of masks, allowed even the most scrupulous persons to indulge in without any violation of propriety. Undoubtedly, however, the conduct of the government, the nature of her religion, and the vast wealth that formerly centred in Venice, all tended to corrupt the morals of the people, and to immerse them in sensual pleasures. We hardly think it was ever, as Addison has stated, a part of the policy of government "to encourage idleness and luxury in the nobility, to cherish ignorance and licentiousness in the clergy, to keep alive a continual faction in the common people, to connive at the viciousness and debauchery of convents, to breed dissensions among the nobles of the *terra-firma*, and to treat a brave man with scorn and infamy." (*Travels*, art. *Venice*.) But, whether intended or not, this, no doubt, was the effect of their jealous despotism, which, by its intolerance of all that was truly great, generous, and noble, shut up, in as far as possible, all the avenues to distinction in politics, literature, and even war, leaving little, save intrigue and licentiousness, to occupy the public mind. But, as already stated, society in Venice has been materially changed since the revolution of 1797. Lord Byron says, that "of the *gentiluomo Veneto*, the name is still known, and that is all. He is but the shadow of his former self, but he is polite and kind. It may surely be pardoned to him if he is querulous." But, notwithstanding the changes to which they have been subjected, and which have reduced them from haughty lords, but "one degree below kings," to abject subjects, the Venetians are now, as of old, most agreeable companions, and the Paphian queen still holds her court in the sea-girt city,

"In Venice Tasso's echoes are no more,  
And silent rows the songless gondolier;  
Her palaces are crumbling to the shore,  
And music meets not always now the ear;  
Those days are gone—but Beauty still is here,  
States fall—arts fade—but Nature doth not die;  
Nor yet forget how Venice once was dear,  
The pleasant place of all festivity.  
The revel of the earth, the masque of Italy!"

Foreigners, especially, are extremely well received, and society is on a very easy footing in Venice. Owing to the facility with which the city is supplied with provisions from the interior of Lombardy and elsewhere, and the lowliness of rents, living is here unusually cheap; and were it not for its disadvantages in other respects, it would be a very desirable residence.

**The Government of Venice** was one of the most singular that has ever existed. In her earlier period she appears to have been governed by doges, or princes, who were elected

by the popular voice; but who, on being elected, became the absolute rulers of the state. The doge enjoyed, however, only a precarious dignity; for, in the event of any disaster occurring to the arms of the republic, or of his becoming unpopular, he was not unfrequently deposed, and sometimes assassinated. (*Daru*, i. 186, &c.) To obviate the disorders that grew out of this state of things, it was resolved, in the 12th century, that each of the six districts into which the city was then divided should nominate two individuals as electors, and that the twelve electors so chosen should nominate a grand council of 470 individuals which should represent the public, the general assemblies of which were henceforth discontinued. A senate was at the same time created, and six councillors were appointed to assist, or rather control, the proceedings of the doge. (*Daru*, i. 193, &c.) But notwithstanding the influence of the popular voice was greatly lessened by the establishment of the grand council, which included all the most distinguished citizens, it was still very considerable; and on several occasions the people endeavoured by violence to recover the power they had lost. In this, however, they were wholly unsuccessful; and at length, after various struggles, it was resolved in 1319, that the grand council should no longer be elected, but that the dignity should be hereditary in its members! (*Daru*, i. 518.) The aristocracy was thus established on a solid foundation; but no sooner had this been done than the dignified families became jealous of each other; and to avert the chance of any individual acquiring a preponderant influence in the state, a carefully devised scheme of indirect election to all the higher offices was established, at the same time that the nobles subjected themselves, the doge, and every one else, to a system of despotism which not only determined the public and private conduct, but, in some measure, even the very thoughts of individuals! This was accomplished, partly by the institution of the council of ten, a committee chosen from the grand council, to which all the powers of the state were entrusted, and partly by the institution, in 1454, of three state inquisitors, selected from the council of ten, and invested with all but unlimited authority. The proceedings of this most formidable tribunal were shrouded in the most impenetrable secrecy; but it was believed at the time, and is now certain, that it did not wait for overt acts, but proceeded on suspicion and presumption; that it had secret prisons; and that it made free use of the agency of spies, torture, and even of assassins. An individual disappeared, by what means no one knew; but if it were supposed that he had fallen a victim to the fears or suspicions of the inquisitors, his relatives prudently abstained from all complaint, and even from making any inquiries respecting him. An unguarded expression, if reported, as was frequently the case, to the inquisitors, was sure to draw their attention to the offender, so that not merely the freedom of the press, but even of speech, at least on political matters, was completely annihilated. Although, however, this jealous tyranny did not fail to repress, or rather extinguish some of the nobler energies of the mind, it must be admitted, that it preserved for a lengthened period the peace of the republic. It is true, also, that its despotism pressed equally on all classes and all individuals; the doge was as liable, and as likely, if occasion required, to be called to account by the inquisitors as the humblest gondolier. Nothing, in fact, but implicit obedience to established authority, and a perfect abstinence from every sort of political preference and remark, could enable any individual, however high or low, to sleep soundly in Venice.

**Historical Notice.**—Venice was the earliest, and for a lengthened period the most considerable, commercial city of modern Europe. Her origin dates from the invasion of Italy by Attila, in 452. A number of the inhabitants of Aquileia, and the neighbouring territory, flying from the ravages of the barbarians, found a poor but secure asylum in the cluster of small islands opposite the mouths of the Brenta, on which the city is built. In this situation they were forced to cultivate commerce and its subsidiary arts, as the only means by which they could maintain themselves. At a very early period they began to trade with Constantinople and the Levant; and notwithstanding the competition of the Genoese and Pisans, they continued to engross the principal trade in eastern products, till the discovery of a route to India by the cape of Good Hope turned this traffic into a totally new channel. The crusades contributed to increase the wealth, and to extend the commerce and the purity, when the Turkish sultan, Mahomet II., entered Constantinople sword in hand, and placed himself on the throne of Constantine and Justinian, the power of the Venetians had attained its maximum. At that period, besides several extensive, populous, and well cultivated provinces in Lombardy, the republic was mistress of Crete and Cyprus, of the greater part of the Morea, and most of the isles in the Egean sea. She had secured a chain of forts and factories that extended along the coasts of Greece from the

## VENICE.

Morea to Dalmatia; while she monopolized almost the whole foreign trade of Egypt. The preservation of this monopoly, of the absolute dominion she had early usurped over the Adriatic, and of the dependence of her colonies and distant establishments, were among the principal objects of the Venetian government; and the measures it adopted in that view were at once skillfully devised, and prosecuted with inflexible constancy. With the single exception of Rome, Venice, in the 15th century, was by far the richest and most magnificent of European cities; and her singular situation in the midst of the sea contributed to impress those by whom she was visited with still higher notions of her wealth and grandeur. Sannazarus is not the only one who has preferred Venice to the ancient capital of the world; but none have so beautifully expressed their preference.

Viderat Adriacis Venetam Neptunus in undis;  
Sic urem, et lo'o ponere jura mari.  
Nunc mihi Turpes quantūvis, Jupiter, arces  
Obijce, et illa tua monia Martis, ait;  
Si Tiberim pelago præferas, artem aspice utramque,  
Illam homines dicas, hanc posuisse Deos.

Though justly regarded as one of the principal bulwarks of Christendom against the Turks, Venice had to contend, in the early part of the 16th century, against a combination of the European powers. The famous league of Cambray, of which Pope Julius II. was the real author, was formed for the avowed purpose of effecting the entire subjugation of the Venetians, and the partition of their territories. The emperor and the kings of France and Spain joined this powerful confederacy. But, owing less to the valour of the Venetians than to dissensions among their enemies, the league was speedily dissolved without materially weakening the power of the republic. From that period the policy of Venice was comparatively pacific and cautious. But notwithstanding her efforts to keep on good terms, with the Turks, the latter invaded Cyprus in 1570; and conquered it after a gallant resistance continued for eleven years. The Venetians had the principal share in the decisive victory gained over the Turks at Lepanto in 1571: but owing to the discordant views of the confederates, it was not properly followed up, and could not prevent the fall of Cyprus.

The war with the Turks in Candia commenced in 1645, and continued till 1670. The Venetians exerted all their energies in defence of this valuable island; and its acquisition cost the Turks above 200,000 men. The loss of Candia, and the rapid decline of the commerce of the republic, now almost wholly turned into other channels, reduced Venice, at the close of the 17th century, to a state of great exhaustion. She may be said, indeed, to have owed the last 100 years of her existence more to the forbearance and jealousies of others than to any strength of her own. Nothing, however, could avert that fate she had seen overwhelm so many once powerful states. In 1797, the "maiden city" submitted to the yoke of the conqueror: and the surviving witness of antiquity—the link that united the ancient to the modern world—stripped of independence and of wealth, now enjoys only a precarious existence, and is slowly sinking into the waves whence she arose.

The foundation of Venice is described by Gibbon, c. 35; and in his 60th chapter he has eloquently depicted her prosperity in the year 1200. Mr. Hallam, in his work on the *Middle Ages* (i. 470–487), has given a brief account of the changes of the Venetian government. Her history occupies a considerable space in the voluminous work of M. Sismondi on the *Italian Republics*; but his details as to her trade and commercial policy are singularly meagre and uninteresting. All previous histories of Venice have, however, been thrown into the shade by the admirable work of M. Daru (*Histoire de la République de Venise*, 2d ed. 8 vols. 8vo, Paris, 1821). Having had access to genuine sources of information, inaccessible to all his predecessors, M. Daru's work is as superior to theirs in accuracy, as it is in most other qualities required in history.

*Trade, Navigation, and Manufactures of the Venetians in the 15th Century.*—The Venetian ships of the largest class were denominated galleasses, and were fitted up for the double purpose of war and commerce. Some of them carried 50 pieces of cannon, and crews of 600 men. These vessels were sometimes, also, called argosies or argosies. They had early an intercourse with England; and argosies used to be common in our ports. In 1325, Edward II. entered into a commercial treaty with Venice, in which full liberty is given to them, for 10 years, to sell their merchandise in England, and to return home in safety, without being made answerable, as was the practice in those days, for the crimes or debts of other strangers. (*Anderson's Chron. Deduction*, Anno. 1325.) Sir William Monson mentions, that the last argosie that sailed from Venice for England was lost, with a rich cargo and many passengers, on the coast of the Isle of Wight, in 1537.

In the beginning of the 15th century, the annual value of the goods exported from Venice by sea, exclusive of those

exported to the states adjoining her provinces in Lombardy, was estimated, by contemporary writers, at 10,000,000 ducats; the profits of the out and home voyage, including freight, being estimated at 4,000,000 ducats. At the period in question, the Venetian shipping consisted of 3000 vessels of from 100 to 200 tons burden, carrying 17,000 sailors; 300 ships with 8000 sailors; and 45 galleys of various sizes, kept afloat by the republic for the protection of her trade, &c., having 11,000 men on board. In the dock-yard, many labourers were usually employed.\* The trade to Syria and Egypt seems to have been conducted principally by ready money; for 500,000 ducats are said to have been annually exported to these countries; 100,000 were sent to England. (*Daru*, tome ii. p. 189, &c.) The vessels of Venice visited every port of the Mediterranean, and every coast of Europe; and her maritime commerce was, probably, not much inferior to that of all the rest of Christendom. So late as 1515, five Venetian galleasses arrived at Antwerp, laden with spices, drugs, silks, &c., for the fair at that city.

The Venetians did not, however, confine themselves to the supply of Europe with the commodities of the east, and to the extension and improvement of navigation. They attempted new arts, and prosecuted them with vigour and success, at a period when they were entirely unknown in other European countries. The glass manufacture of Venice was the first, and for a long time the most celebrated, of any in Europe; and her manufactures of silk, cloth of gold, leather, refined sugar, &c., were deservedly esteemed. The jealousy of the government, and their intolerance of any thing like free discussion, was unfavourable to the production of great literary works. Every scholar is, however, aware of the fame which Venice early acquired by the perfection to which she carried the art of printing. The classics that issued from the Aldine presses are still universally and justly admired for their beauty and correctness.

But the policy of government, though favourable to the introduction and establishment of manufactures, was fatal to their progressive advancement. The importation of foreign manufactured commodities into the territories of the republic for domestic consumption was forbidden under the severest penalties. The processes to be followed in the manufacture of most articles were regulated by law.—“*Des l'année 1172, un tribunal avoit été créé pour la police des arts et métiers, la qualité et la quantité des matières furent soigneusement déterminées.*” (*Daru*, iii. 153.) Having, in this way, little to fear from foreign competition, and being tied down to a system of routine, there was nothing left to stimulate invention and discovery; and during the last century the manufactures of Venice were chiefly remarkable as evincing the extraordinary perfection to which they had early arrived, and the absence of all recent improvements. An unexceptionable judge, M. Berthollet, employed by the French government to report on the state of the arts of Venice observed, “*Que l'industrie des Vénitiens, comme celle des Chinois, avoit été précoce, mais étoit restée stationnaire.*” (*Daru*, iii. p. 161.)

M. Daru has given the following extract from an article in the statutes of the state inquisition, which strikingly displays the real character of the Venetian government, and their jealousy of foreigners:—“If any workman or artisan carry his art to a foreign country, to the prejudice of the republic, he shall be ordered to return; if he do not obey, his nearest relations shall be imprisoned, that his regard for them may induce him to come back. If he return, the past shall be forgiven, and employment shall be provided for him at Venice. If, in despite of the imprisonment of his relations, he persevere in his absence, an emissary shall be employed to despatch him; and after his death his relations shall be set at liberty.” (*Tome* iii. p. 150.)

The 19th book of M. Daru's history contains a comprehensive and well-digested account of the commerce, manufactures, and navigation of Venice. But it was not possible, in a work on the general history of the republic, to enter so fully into the details as to these subjects as their importance would have justified. The *Storia Civile e Politica del Commercio de' Veneziani*, di Carlo Antonio Marlin, in 8 vols. 8vo, published at Venice at different periods, from 1798 to 1808, is unworthy of the title. It contains, indeed, a great many curious statements; but it is exceedingly prolix; and while the most unimportant and trivial subjects are frequently discussed at extreme length, many of great interest are either entirely omitted, or are treated in a very brief and unsatisfactory manner. The commercial history of Venice remains to be written; and were it executed by a person of competent attainments, it would be a most valuable acquisition.

*Present Trade and Manufactures of Venice.*—From the period when Venice came into the possession of Austria,

\* The native authorities say 16,000; but there can be no doubt that this is a grossly exaggerated statement, and that 1600 would be much nearer the mark.

## VENLOO.

down to 1830, it seems to have been the policy of the government to encourage Trieste in preference to Venice; and the circumstance of the former being a free port, gave her a very decided advantage over the latter. Latterly, however, a more equitable policy has prevailed. In 1830, Venice was made a free port, and has since fully participated in every privilege conferred on Trieste. But, notwithstanding this circumstance, the latter still continues to preserve the ascendancy; and the revival of trade that has taken place at Venice has not been so great as might have been anticipated. The truth is, that except in so far as she is the *entrepôt* of the adjoining provs. of Lombardy, Venice has no considerable natural advantage as a trading city; and her extraordinary prosperity during the middle ages is more to be ascribed to the comparative security enjoyed by the inhabitants, and to their success in engrossing the principal share of the commerce of the Levant, than to any other circumstance. Still, however, her trade is far from inconsiderable. But, unfortunately, there are no means by which to ascertain its precise amount. The great articles of import are sugar, coffee, and other colonial products; indigo and other dye stuffs, olive oil, salted fish, various descriptions of cotton, woollen, and other manufactured goods; wheat and other grain, from the Black sea; tin plates and hardware, raw cotton, &c.; amounting, in all, to the value probably of £1,500,000 or £1,600,000 a year. The exports principally consist of silk and silk goods, wheat and other grain, paper, jewellery, glass, and glass wares, Venetian treacle, books, with a great variety of other articles, including portions of most of those that are imported. It should, however, be observed, that by far the greater part both of the import and export trade of the city is carried on through Trieste by coasting vessels, that are every day passing between the two cities. The smuggling of prohibited and over-taxed articles into Austrian Lombardy is practised to a great extent. It is believed that fully two thirds of the coffee made use of in Lombardy is clandestinely introduced; and sugar, British cottons and hardware, with a variety of other articles, are supplied through illegitimate channels. The facilities for smuggling, owing to the nature of the frontier, and the ease with which the officers are corrupted, are such, that the articles passing through the hands of the fair trader afford no test of the real extent of the business done. It is to be hoped that the Austrian government will take an enlightened view of this important matter. It cannot but be anxious for the suppression of smuggling; and it may be assured that this is not practicable otherwise than by a reduction of duties. The regulations as to the payment of the duties on goods destined for the interior, the clearing of ships, &c., are the same at Venice as at Trieste; which see.

The manufactures of Venice are very various, and more extensive than is generally supposed. The glass-works, which produce magnificent mirrors, with every variety of artificial pearls and gems, coloured beads, &c., situated on the island of Murano, employ, in all, about 4000 hands, including the women and children employed in arranging the beads. (*Bowring*.) Jewellery, including gold chains, is also extensively produced; as are gold and silver stuffs, velvets, silks, laces, and other expensive goods; and treacle, soap, earthenware, wax-lights, &c., to a greater or less extent. Printing is more extensively carried on in this than in any other city of Italy, and books form a considerable article of export. Ship-building is also carried on to some extent, both here and at Chiozza. In 1836, the first steam-engine seen in Venice was set up for a sugar-refinery.

From the circumstance of Venice being situated nearly opposite the mouths of the Brenta, which bring down large quantities of mud, the probability is that the lagoon by which she is surrounded will ultimately be filled up. Under the republic this was a subject of great apprehension, and every device was resorted to that seemed likely to avert a result so pregnant with danger to the independence of the city. But now that there is no particular motive for hindering the mud from accumulating in the lagoon, it is probable that, in the course of time, the shallows will be converted into terra firma, and Venice lose her insular position.

There belong to the city, exclusive of fishing-boats, about 30,000 tons of shipping, of which a large proportion is employed in the coasting trade. Many of the inhabitants depend for their subsistence on fishing in the lagoon, and the contiguous portion of the Adriatic. (Exclusive of the authorities already referred to, see *Bowring's Report on the Statistics of Italy*; *Commercial Dictionary*; *Commercial Circulars*, &c.)

VENLOO, a fortified town of Holland, prov. Limbourg, cap. cant., on the Meuse, 40 m. N.E. Maestricht. Pop. in 1836, 6325. It is surrounded by a marshy tract of country, but is the centre of an active transit trade, and has manufactures of pins, wafers, tobacco-pipes, and various other small articles, with tanneries, sugar-refineries, and vinegar

## VERA CRUZ.

distilleries. It was formerly one of the Hanse towns: in 1702 it was taken by the troops under Marlborough.

VENOSA (an. *Venusia*, on the frontier of Lucania and Apulia), a town of the Neapolitan dom., prov. Basilicata, 24 m. N. Potenza. Pop. 6000. It stands on a perfectly flat, but not very extensive, plain. It is reached by a long, winding ascent, when it breaks on the sight under a favourable point of view, chiefly due to the venerable aspect of its castle, an edifice of the 15th century, which, though a complete ruin, exhibits such magnitude of dimensions and regularity of construction, as to form a very striking feature in the landscape. The walls of Venosa have long since been levelled with the ground, but the gateways still exist. It is well built, and has numerous public edifices, including a large cathedral, five parish churches, an abbey church, a church erected in the 10th century from the materials of a Roman amphitheatre, in which are the tombs of Robert de Guiscard and other Norman chieftains; a hospital, two workhouses, a museum of antiquities, &c.

Venusia is celebrated as the birthplace of Horace, the prince of Latin lyric poets and satirists, born on the 8th of December, anno 66 B.C. (A.U.C. 688), in the consulship of L. Manlius Torquatus.

"O nata mecum consule Manlio."—III. Od. 21.

A bust of the poet, on a column of rough stone, has been set up in the city. In the vicinity are many places which have acquired interest from the references made to them by Horace. (*Craven's Excurs. in the Abruzzi*, 270, 289; *Tiraboschi, Della Letteratura Italiana*, i., 177, ed. Modena, 1787.)

VERA CRUZ, a town and the principal seaport of Mexico, on the S.W. side of the gulf of Mexico, cap. of the state of its own name, 195 m. E. by S. Mexico, and 225 m. S.E. Tampico. Lat. 19° 11' 52" N., long. 96° 8' 45" W. Pop. uncertain, but previously to the revolution it was estimated at 16,000. It is well built and clean, and its towers, cupolas, and battlements give it an imposing appearance from the sea. It is, however, surrounded by barren sandhills and ponds of stagnant water, and is excessively unhealthy, being, in fact, the principal seat of the yellow fever. The older inhabitants and those accustomed to the climate are not so subject to this formidable visitation as strangers, all of whom, even if coming from the Havanna and the W. India islands, are liable to the infection. No precautions prevent its attack, and numerous individuals have died at Xalapa, on the road to Mexico, who merely passed through this pestilential focus. The badness of the water at Vera Cruz is supposed to have some share in producing the complaint. The houses of Vera Cruz are mostly large, some of them being three stories high, built in the old Spanish or Moorish style, and generally enclosing a square court, with covered galleries. They have flat roofs, glass windows, and generally wooden balconies in front, their interior arrangement being the same as in Old Spain. The town and castle are built of madrepora, the lime that forms the cement being of the same material. There is one tolerably good square, of which the government house forms one side, and the principal church the other. The footpaths are frequently under arcades. No fewer than 16 cupolas or domes used to be counted from the sea, but only six churches are now in use; and most of the religious buildings have been neglected or abandoned since the Spaniards were expelled from the town. Rain-water is carefully preserved in tanks; and most sorts of provisions, excepting fish, are dear. Crowds of vultures and buzzards perform the office of scavengers. (*Bullock in Mod. Trav.*, xxv.)

The castle of St. Juan de Ulloa, which commands the town, is built on the small island of the same name, about 400 fathoms from the shore. It is a strong citadel, and its N.W. angle supports a lighthouse, with a brilliant revolving light, 79 ft. above the sea. The harbour of Vera Cruz is a mere roadstead between the town and castle, and is exceedingly insecure, the anchorage being so very bad that no vessel is considered safe unless made fast to brass rings fixed for the purpose, in the castle wall; nor are these always a sufficient protection during strong N. winds. But notwithstanding its numerous disadvantages, Vera Cruz maintains its commercial importance; though latterly Tampico, in a healthier situation, with a better port, has been growing into consequence. The precious metals, cochineal, sugar, flour, indigo, provisions, sarsaparilla, leather, vanilla, jalap, soap, logwood, and pimento, are the principal articles exported; and linen, cotton, woollen, and silk goods, paper, brandy, cocoa, quicksilver, iron, steel, wine, wax, &c. (See *ant.*, 352.) During the period that the foreign trade of Mexico was carried on exclusively by the *flota*, which sailed periodically from Cadiz, Vera Cruz was celebrated for its fair, held at the arrival of the ships. It was then crowded with dealers from Mexico, and most parts of Spanish America; but the abolition of the system of regular fleets, in 1773, proved fatal to this fair, as well

## VERCELLI.

as to the still more celebrated fair of Portobello. We have already noticed (*ante*, p. 352.) the wretched state of disrepair into which the great road from Vera Cruz to Mexico, formed by the Spaniards, has latterly been allowed to fall. This inflicts a great injury on the trade of the port.

Vera Cruz was founded towards the end of the 16th century, on the spot where Cortez first landed: it received the title and privileges of a city from Philip III. in 1615. The castle was taken by a French squadron, after a vigorous bombardment, in 1839, but was soon after restored to the Mexicans. (*Humboldt; Ward; Poinsett; Mod. Trav., xxv.; Blunt's Coast Pilot; Comm. Dict.*)

VERCELLI (an. *Vercellæ*), a town of N. Italy, Sardinian dom., div. Novara, cap. prov. on the Sesia, and on the high road between Turin and Milan, 39 m. N.E. by E. Turin. Pop. in 1838, 18,353. It has a large market-place, one of the best cathedrals in Piedmont, several other churches, and good private buildings, a large and well kept hospital, museum, &c., with (in its environs) some fine promenades. Its fortifications were destroyed by the French in 1704. It is the see of an archbishop, and has some silk manufactures: but its chief trade is in rice, raised in the neighbourhood. A canal connects Vercelli with Ivrea. The date of its foundation is uncertain, but it was a town of some note in the time of the Romans. After suffering severely from the northern invaders, it revived under the Lombards, and took the lead of Turin till the latter became the residence of the court. (*Dict. Geog., &c.*)

VERDUN, (an. *Verodunum*), a town of France, dep. Meuse, cap. arrond., on the Meuse, where it begins to be navigable, and by which it is divided into five separate parts, 30 m. N.W. by N. Bar-le-Duc. Pop., 1836, ex comm., 9151. It has a citadel; and its defences were improved by Vauban. It is tolerably well built, but several of its streets are badly paved and steep. The bishop's palace, new cavalry barracks, military magazines, and theatre, are among the most remarkable buildings. It has six churches, including the cathedral; a Protestant church, a synagogue, a communal college, library with 14,000 volumes, &c. A planted esplanade separates the town from its citadel. Verdun has manufactures of fine striped serges, flannels, cotton yarn, liqueurs, &c., and several large tanneries. It was a station of importance under the Romans; and in the middle ages, under the Germanic emperors, it enjoyed the privileges of a free imperial city. It was definitively annexed to France in 1648; and is best known in modern times from its having been selected by Napoleon for the residence of the English prisoners detained in France after the rupture of 1803. (*Hugo, art. Meuse, &c.*)

VERGENNES, city, Addison co., Vt., 66 m. W. by S. Montpelier, 21 m. S. Burlington, 489 W. This is the only city in Vermont, chartered as such in 1783, having a territory 480 rods long and 400 wide. It is situated on both sides of Otter creek, over which is a bridge, 7 in. from its mouth. Vessels of 300 tons can come to its wharves, and here M'Donough's fleet, which gained the victory over the British in the battle of Plattsburgh, was fitted out. The falls in Otter creek, 37 ft. high, afford a very superior water-power, unsurpassed in the state; and extensive iron-works have here been erected, which are now in part suspended. It contains three churches, a Congregational, Episcopal, and Methodist; a bank, 13 stores, two fulling-mills, one woollen factory, two grist-mills, two saw-mills, three tanneries, one printing-office, one weekly newspaper; three schools, 230 scholars. Pop. 1017. Canal-boats ply regularly between this city and New-York.

VERMILION, county, Ia. Situated in the W. part of the state, and contains 280 sq. m. Bounded E. by Wabash river. Watered by Vermillion river. It contained in 1840, 7632 neat cattle, 6498 sheep, 23,085 swine; and produced 51,185 bushels of wheat, 508,297 of Indian corn, 83,027 of oats, 18,629 of potatoes, 29,051 pounds of rice, 890 of tobacco. It had 22 stores, four flouring-mills, three grist-mills, six saw-mills, two tanneries, five distilleries, one printing-office, one weekly newspaper; 13 schools, 426 scholars. Pop. 8274. Capital, Newport.

VERMILION, county, Ill. Situated in the E. part of the state, and contains 1000 sq. m. Drained by Big and Little Vermillion rivers and their branches. It contained in 1840, 13,725 neat cattle, 16,966 sheep, 35,984 swine; and produced 69,708 bushels of wheat, 6392 of rye, 941,810 of Indian corn, 180,353 of oats, 20,602 of potatoes, 5481 pounds of tobacco, 101,807 of sugar. It had 24 stores, four flouring-mills, 15 grist-mills, 27 saw-mills, one oil-mill, three tanneries, three distilleries, three potteries; 26 schools, 691 scholars. Pop. 9303. Capital, Danville.

VERMILION, p. t., Erie co., O., 119 m. N. Columbus, 389 W. Bounded N. by lake Erie. Watered by Vermillion river. It has 12 schools, 575 scholars. Pop. 1334.

VERMONT, one of the northern United States, in the N.W. corner of New-England, and is between 42° 44' and 45° N. lat., and between 71° 33' and 73° 25' W. long., and 1016.

## VERMONT.

between 3° 35' and 5° 29' E. long. from Washington. The line surveyed and marked by Valentine and Collins previously to the year 1774 as the 45th degree of N. lat., and which has been known and understood as the line of division between Vermont and Lower Canada, is settled by the late treaty of compromise between the United States and Great Britain as the true line, though by the observations made in 1818 by Messrs. Hassler and Tiarks, surveyors under the treaty of Ghent, the 45th deg. of N. lat. was found to be a little S. of the line previously settled. The old line is now definitively settled as the true boundary, which gives Vermont a strip of land, not far from half a mile wide, more than she would have had by the true line of 45° N. lat. The state is bounded N. by Lower Canada, E. by the western bank of Connecticut river, which separates it from New-Hampshire, S. by Massachusetts, and W. by New-York, from which it is chiefly separated by lake Champlain. It is 157½ m. long from N. to S., and 57½ m. wide from E. to W., and contains 90564 sq. m., or 5,795,960 acres. The population in 1790 was 85,589; in 1800, 154,465; in 1810, 217,895; in 1820, 235,764; in 1830, 280,679; in 1840, 291,948. Of these, 146,378 were white males, 144,840 were white females; 364 were coloured males, 366 were coloured females. Employed in agriculture, 73,150; in commerce, 1303; in manufactures and trades, 13,174; in mining, 77; in navigating the ocean, 41; ditto lakes, rivers, and canals, 146; in the learned professions, 1563.

The state is divided into 14 counties, which, with their population in 1840, were as follow:

Addison . . .	23,583	Lamoille . . .	10,475
Bennington . .	16,872	Orange . . .	27,873
Caledonian . .	21,891	Orleans . . .	13,634
Chittenden . .	22,977	Rutland . . .	30,699
Essex . . . .	4,226	Washington .	23,506
Franklin . . .	24,531	Windham . .	27,442
Grand Isle . .	3,883	Windsor . . .	40,356

Montpelier, on Winooski or Onion river, 38 m. E.S.E. from Burlington, and about 10 m. N.E. of the geographical centre of the state, is the seat of government or political capital.

The surface of Vermont is hilly or mountainous. A few townships along the margin of lake Champlain may be regarded as level, extending from 5 to 10 m. from it; but otherwise the surface is generally uneven, consisting of hills and valleys, alluvial flats, gentle acclivities, elevated plains, and lofty mountains. The range of the Green mountains, so named by the French from the evergreens which cover them, and which have given name to the state, extend quite through it from N. to S. From the line of Massachusetts to the southern part of Washington county, it constitutes a lofty and unbroken range, keeping nearly a middle course between Connecticut river on the E. and lake Champlain on the W., and dividing the waters which fall into each. Though the passage across the mountains in this part is arduous, yet, by the construction of good roads, and a judicious location of them, it is much less so than formerly. In the southern part of Washington county the Green mountains are separated into two ranges. The highest of these ranges passes W. of the middle of the state to Canada line. The highest peaks lie in this range, which are Camel's Hump, generally called Camel's Rump, 4188 ft. high, and the Chin, in Mansfield mountain, 4279 ft. high; and it is remarkable that the whole is cloven down to its base, admitting a passage for Winooski or Onion river through it, the mountain approaching oftentimes so near the river as scarcely to admit a road along its banks, and affording much sublime and romantic scenery. The other range strikes off much more to the E., extending also to near the Canada line. It is called the height of land, dividing the waters which fall into Connecticut river from those which, in the N. part of the state, flow into lake Champlain and lake Memphremagog. Though having no peaks so high as those of the western range, it is more uniformly elevated, yet with so gentle an acclivity as to admit of easy roads over it in various places; while the western range admits of roads across it chiefly where it is penetrated by the Winooski, Lamoille, and Missisque rivers, though in its northern parts it becomes less formidable. It is an interesting fact that the road from Burlington on lake Champlain, along Winooski river, through Montpelier, and thence down White river to Hartford, Vermont, on Connecticut river, passes over no considerable hills, and may hereafter be occupied by a line of railroads or canals from Connecticut river to lake Champlain.

The soil of Vermont is generally fertile, but better adapted to grazing than to grain. Throughout the western border of the state, near lake Champlain, the soil is fertile, and adapted to wheat, and summer wheat succeeds well in most parts of the state. Indian corn is produced most extensively on the margins of the streams, but does well in other parts. Even on the Green mountains are fine grazing:

## VERMONT.

farms. The productions of the state are wheat, rye, Indian corn, barley, oats, buckwheat, potatoes, peas, and flax. The natural growth of the soil E. of the mountains is birch, beech, maple, ash, elm, and butternut; and W. of the mountains the growth of hardwood is intermixed with pine and other evergreens. The state is capable of raising sufficient grain for home consumption, but is particularly distinguished for its excellent pasturage, giving subsistence to numerous flocks of sheep and herds of cattle.

In 1840 there were in the state 62,402 horses and mules, 384,341 neat cattle, 1,681,819 sheep, 203,800 swine; poultry was raised to the value of \$131,578. There were produced 495,800 bushels of wheat, 1,119,678 of Indian corn, 230,993 of rye, 54,781 of barley, 288,416 of buckwheat, 2,222,548 of oats, 8,869,751 of potatoes, 3,699,235 pounds of wool, 4,647,934 of sugar, 48,137 of hops, 4,669 of wax, 4286 of silk cocoons, 836,739 tons of hay, 29 of hemp and flax. The products of the dairy amounted to \$2,008,737; of the orchard to \$213,944; of lumber to \$349,939; 718 tons of pot and pearl ashes were produced.

The exports consist of beef, pork, butter, cheese, live cattle, and pot and pearl ashes. The trade E. of the mountains is chiefly with Boston and Hartford; and W. of the mountains to New-York and Montreal and Quebec, to which it has a ready access through lake Champlain, the Champlain canal, and the Hudson and St. Lawrence rivers.

The climate is healthy, though the winters are severe. The ordinary extreme range of the thermometer is from 92° above to 22° below zero of Fahrenheit, though in some instances it has risen above and fallen below this. Snow generally lies from December to March, and is often 4 ft. deep upon the mountains. It is, on an average, several degrees colder on the eastern than on the western side of the mountains. Lake Champlain is not generally wholly frozen over, until about the first of February.

The most considerable rivers are on the W. side of the mountains, and flow into lake Champlain. They are Otter creek, 85 m. long, and navigable for sloops 6 m. to Vergennes; Onion or Winoski river, which is 80 m. long, and enters the lake 4 m. N. of the village of Burlington; La-moille, which is 70 m. long; and Missisque, which is about the same length. Small boats may penetrate these rivers to their lower falls, and they have all fine sets of falls, which afford extensive water-power. The principal rivers on the E. side of the mountains flow into Connecticut river; they are Deerfield, West, White, Black, and Passumpsic.

Lake Champlain lies partly in New-York, but more than half of it within the limits of Vermont. It extends in a straight line 102 m. from Whitehall to the 45th deg. of N. lat., and thence about 24 m. to St. John's in Canada. This lake is connected by a canal, 64 m. long, to Hudson river near Albany, which also forms a junction with the Erie canal. This lake contains about 567 sq. m., two thirds of which lie within the limits of Vermont. Lake Memphrenagog is 40 m. long, and 7 or 8 m. wide, lies on the N. line of the state, one third being in Vermont and two thirds in Canada. Lake Bombazine, on the W. border of Castleton, and lake Dunmore, in Salisbury, are considerable bodies of water. The islands of lake Champlain are considerably numerous, and some of them are large, fertile, and populous. The principal of these islands, with the peninsula of Alburgh, constitute Grand Isle county. They are N. Hero, S. Hero, and La Motte. There are various harbours in Vermont on lake Champlain, the principal of which are St. Alban's, Burlington, Vergennes, and some others.

Burlington is the largest and most commercial town in the state. The other principal towns are Middlebury, St. Alban's, Rutland, and Bennington in the W., Montpelier in the centre, and Windsor, Woodstock, Danville, and Newbury on the E. side of the mountains.

The exports of this state for the year ending Sept. 30th, 1841, were \$277,987; and the imports were \$246,739: the tonnage entered was 13,560, and the tonnage cleared of the same amount.

Vermont is an agricultural, rather than a commercial and manufacturing state. There were in 1840, 747 retail stores, with a capital of \$2,964,000; the lumber trade employed a capital of \$45,506; home-made or family goods were produced to the amount of \$874,548; 95 woolen factories and 239 fulling-mills, employing 1450 persons, produced articles to the amount of \$1,331,953, with a capital of \$1,406,950; seven cotton factories, with 7254 spindles, produced articles to the amount of \$113,000, with a capital of \$118,100; 26 furnaces produced 6743 tons of cast iron, and 14 forges produced 655 tons of bar iron, the whole employing 788 persons and a capital of \$664,150; hats and caps were manufactured to the amount of \$62,432, and straw bonnets to the amount of \$32,819, the whole employing 126 persons and a capital of \$32,875; 17 paper-mills produced articles to the amount of \$179,720, and all other manufactures of paper to the amount of \$35,000, the whole employing 195 persons and a capital of \$216,500; two glass-houses employed 70

persons, producing articles to the amount of \$55,000, with a capital of \$35,000; eight potteries produced articles to the amount of \$23,000, with a capital of \$10,350; 261 tanneries employed 509 persons and a capital of \$403,093; 399 other manufactures of leather, as saddleries, &c., produced articles to the amount of \$361,468, with a capital of \$168,090; granite and marble was produced to the amount of \$62,515; bricks and lime were made to the amount of \$402,218; two distilleries and one brewery employed five persons and a capital of \$850; 87 persons produced machinery to the amount of \$101,354; 33 persons produced hardware and cutlery to the amount of \$16,630; 437 persons manufactured carriages and wagons to the amount of \$162,097, with a capital of \$101,570; 190 persons manufactured furniture to the amount of \$83,275, with a capital of 49,550; 42 persons manufactured 1158 small arms, vessels were built to the amount of \$72,000; 29 printing-offices, 14 binderies, two dailies, 26 weeklies, and two semi-weekly newspapers, and three periodicals, employed 156 persons and a capital of \$194,300; 72 brick or stone houses and 468 wooden houses were built, employing 912 persons, and cost \$344,896. The total capital employed in manufactures in the state was \$4,396,440.

There are three colleges in Vermont. The university of Vermont, at Burlington, was founded in 1791; Middlebury college, at Middlebury, was founded in 1800; Norwich university was founded at Norwich in 1834. In these institutions there were in 1840, 233 students. There were in the state 46 academies with 4113 students, and 2402 common and primary schools with 82,117 scholars. There were in the state 2570 white persons over 20 years of age who could neither read nor write.

The principal religious denominations are the Congregationalists, Baptists, and Methodists. In 1836 the Congregationalists had 186 churches, 114 ministers, and 20,575 communicants; the Baptists had 125 churches, 78 ministers, and 10,525 communicants; the Methodists had 75 itinerant preachers; the Episcopalians had one bishop and 18 ministers. Besides these, there is a considerable number of Universalists and Christians, and a few Unitarians and Roman Catholics.

In September, 1839, there were 19 banks in the state, with an aggregate capital of \$1,325,530, and a circulation of \$1,966,812. Vermont has a state debt of about \$250,000, about one half of which was contracted in building the new state house.

There is a state penitentiary located at Windsor.

The first constitution of this state was formed in 1777. The present constitution was formed July 4th, 1793, and has since been amended. The governor is elected annually by the people. He must be a citizen of the United States, and have resided in the state for four years next preceding his election. The lieutenant-governor is elected in the same manner, and must have the same qualifications; and in case of the absence of the governor, or his inability to serve, succeeds to the office. As lieutenant-governor, he is president of the senate. The supreme executive council consists of the governor, lieutenant-governor, and 12 persons chosen by the people. The senate consists of 30 members, each county choosing at least one. Some are entitled to more, according to their population. The house of representatives consists of 231 members, elected annually by the people. Every representative must be a citizen of the United States, must have resided in the state for two years, the latter of which must be in the town for which he is elected. The supreme court consists of five judges, elected annually by the legislature. The supreme court sits once a year, and the county courts twice, in each county. There is a court of chancery, which holds a session in each county, each judge of the supreme court being chancellor of a circuit. The secretary of state is elected annually by the joint vote of both houses of the legislature, and the treasurer is chosen annually by the people. The right of suffrage is enjoyed by every person who is full 21 years of age, a citizen of the United States, of quiet and peaceable behaviour, and who has resided in the state for one year next preceding an election. A council of censors is appointed once in seven years, whose duty it is to inquire whether the constitution has been preserved inviolate, and whether the legislature and executive branches have performed their duty as guardians of the commonwealth; whether the taxes have been justly laid and collected, and the public moneys have been properly disposed of, and the laws have been duly executed.

Excepting a few short canals for the improvement of the navigation of Connecticut river, no work of internal improvement has been undertaken, though several have been projected. The Champlain canal, extending from the lake to Hudson river, is a work in which this state has a deep interest, and from which it derives important advantages.

The first settlement of the state was at fort Dummer, in the S.E. part of the state, by emigrants from Massachusetts.

## VERNON.

New-Hampshire claimed the territory from 1741 to 1764, and granted many townships in the state to proprietors, which were thence called the "New-Hampshire grants," which comprise many of the best towns in the state. New-York also claimed the territory, and obtained a grant of it from the British parliament in 1764. These conflicting claims exceedingly harassed the inhabitants. At the commencement of the revolutionary war, Congress dared not admit Vermont to the Union, though the state proclaimed itself independent, for fear of offending New-Hampshire and New-York, especially the latter. Vermont had a difficult part to act, and it conducted itself with great wisdom and patriotism. The British hoped to be able to detach it from the American confederacy; and its leaders, without committing themselves, flattered these hopes, and saved its exposed frontier from attacks, while no portion of the Union showed a more devoted patriotism, or contributed more, according to its means, to the common cause. The "Green mountain boys" were characterized by daring bravery in the revolutionary struggle. In 1790 New-York was induced, by the payment of \$30,000, to withdraw her claims to the territory; and in 1791 Vermont was admitted to the Union, whose independence she had extensively contributed to acquire.

VERNON, p. t., Tolland co., Ct., 12 m. E.N.E. Hartford, 348 W. Watered by Hockanum river. It contains two churches, a Congregational and a Baptist; four stores; 10 fulling-mills, 10 woollen factories, four cotton factories with 5104 spindles, two grist-mills, three saw-mills, two oil-mills, one paper-mill; eight schools, 322 scholars. Pop. 1430.

VERNON, p. t., Oneida co., N. Y., 16 in. W. Utica, 108 m. W.N.W. Albany, 371 W. Drained by Oneida and Skennandoo creeks. It contains three churches, a Congregational, Baptist, and a Unitarian; 13 stores, three fulling-mills, three woollen factories, two glass-houses, four grist-mills, 13 saw-mills, one printing-office, one weekly newspaper, two academies, 17 schools. Pop. 3043.

VERNON, p. t., Sussex co., N. J., 92 m. N. by E. Trenton, 260 W. Drained by tributaries of Wallkill river. It contains two stores, two forges, three grist-mills, four saw-mills, four distilleries; 12 schools, 371 scholars. Pop. 3395.

VERNON, p. v., Jennings co., Ia., 65 m. S.E. Indianapolis, 569 W. Situated on the E. side of Vernon fork, Muscatatuck river. It contains an elegant brick courthouse, a jail, a county clerk's office, a church common to Presbyterians, Methodists, and Baptists, two stores, and about 250 inhabitants.

VERNON, t., Washington co., Ia. It has six stores, one cotton factory; one school, 20 scholars. Pop. 1936.

VERONA, a celebrated city of Austrian Italy, cap. deleg. of same name, on the Adige, at the point where the last declivities of the Alps sink into the great plain of Lombardy, 64 m. W. Venice; lat. 45° 26' 9" N., long. 11° 0' 54" E. Pop. in 1837, 48,486. (*Berghaus*). It is divided into two unequal parts by the Adige, which sweeps through it in a bold curve, and forms a peninsula, within which the whole of the ancient, and the greater part of the modern city is enclosed. The river, which is wide and rapid, is here crossed by four noble stone bridges.

Verona is an extremely well situated, well built, and most interesting city. "You enter it," says Mr. Rose, "by a magnificent approach, and a street probably the widest in Europe. This street is indeed short, and single in its breadth, but the city in general pleases by its picturesque appearance, to which an abundance of marble quarries has not a little contributed, 35 varieties of this species of stone being found in its neighbourhood." (*Letters*, i., 41.) The houses frequently present, in their form and ornaments, fine proportions, and beautiful workmanship. The old walls and towers still remain, and the city has five gates, two of which are fine structures by Sanmichele. Its former military defences were destroyed by the French, after the revolt of the inhabitants in 1797, but extensive fortifications are again in the course of being constructed.

But the great glory of Verona is its amphitheatre, one of the noblest existing monuments of the ancient Romans. Excepting the Colosseum at Rome, it is the largest extant edifice of its class. Like all other structures of the same kind, it is elliptical, the extreme length of its transverse and conjugate diameters to the outside of the outer walls being respectively about 510 and 410 ft.; while those of the arena are 249 and 146 ft. (*Woods*, i., 226.) Its outer wall or cincture, which had 72 arches in every story, has been mostly destroyed, with the exception of one fragment containing three stories of four arches each, rising to the height of about 100 ft. Over this, however, there was a fourth story, so that the entire height of the building, when perfect, must have exceeded 120 ft. Internally it has suffered comparatively little; and its concentric rows of benches or seats, of which 43 still remain, exclusive of two sunk below ground, with its corridors, stairs, &c., are wonderfully well preserved. Each row of seats is 1½ ft. in

## VERONA.

height, and as much in breadth; and allowing 1½ ft. of space to each individual, the Marquis Maffei supposes that the amphitheatre might have accommodated 22,000 spectators! The interior of the amphitheatre having been in parts a good deal dilapidated; it was repaired at different periods in the 16th century, when the broken and wanting seats were replaced by others. But these repairs, though, on the whole, highly creditable to the Veronese, do not appear to have been well executed. The ancient benches were formed of vast blocks of marble, admirably cut and jointed; whereas the modern benches consist, according to Maffei, of a soft flaky stone, which has, in parts, yielded to the weather; and the same distinguished authority adds, that but little care has been taken in laying the stones, and that in parts the elliptical curvature has not even been observed. These defects, however, are not visible on a cursory inspection of the building, which astonishes alike by its mass, its antiquity, and its preservation.

Owing to the want of inscriptions, and of all reference to its origin in the classical writers, we are without any authentic information either as to the founders or the era of this great work. Most probably, however, it was built somewhere between the reigns of Titus and Trajan, or in the early part of that of the latter. In the middle ages it was sometimes used for the exhibition of shows and sports, and sometimes as an arena for judicial combats. In more modern times, a bull fight was exhibited here in honour of the emperor Joseph II., then at Verona; and at a still later period, the pope, in passing through the city, gave his benediction to a vast multitude collected in the amphitheatre. The French, when masters of Verona, had the bad taste to erect in the arena a wooden theatre, in which plays, farces, equestrian feats, &c., were performed for the amusement of the troops. This barbarous novelty is still kept up. (Full particulars respecting the amphitheatre are given in the *Verona Illustrata* of the learned Marquis Maffei. That part of the work which relates to amphitheatres having been printed separately, was translated into English, and published in 8vo, London, 1730.)

But the amphitheatre is not the only monument of antiquity that distinguishes Verona. In the middle of a street called the *Corso* is an ancient double gateway, which, on the strength of an inscription importing that the adjacent walls were built by Gallienus, has been named after that emperor; but though loaded with supererogatory ornaments, the Veronese antiquaries affirm that its style is too good for his age. Each gateway is ornamented with Corinthian pilasters supporting a light pediment; and above are two stories with six small arched windows in each. The whole is of marble. The remains of another gateway, of a similar but chaster form, probably the entrance to the ancient forum, are to be seen in another street, and near the old Gothic castle, is the arch of the Gavii, perhaps part of a sepulchral edifice, but, at any rate, of very remote antiquity. Two arches in the purest style of Roman architecture make a part of one of the bridges; and the remains of another bridge, and the traces of a very large ancient theatre and naumachia, are still extant. Addison and Evelyn speak of a triumphal arch of Flaminus, as one of the noblest remains of antiquity in Europe, and of an arch commemorating the victory of Marius, with various temples and aqueducts; but as few or no remains of these exist at present, it would seem that the antiquities of Verona had suffered greatly since the beginning of last century.

The ecclesiastical buildings comprise interesting specimens of middle-age architecture. The cathedral, an edifice of the 12th century, has nothing particularly remarkable except the Assumption by Titian; and the tomb of pope Lucius III., who, when driven from Rome, in 1185, found a secure asylum in this city. In respect of architectural merit the cathedral is very inferior to the church of St. Anastasia, built by the Dominicans at the beginning of the 13th century. Mr. Woods says that if the front were finished this edifice would probably be the most perfect specimen of the style of architecture to which it belongs. The church of St. Zeno, a curious structure, with a remarkable crypt, is said to have been founded by Pepin, but it was not completed till 1178. Its front is covered with bas-reliefs in stone, its doors with sculpture in bronze of a very early date; and near it are the remains of a palace in which the German emperors occasionally resided during the 12th and 13th centuries. Several other churches are worthy of notice: in that of San Giorgio is a fine picture of Paul Veronese. The tombs of the Scala family (*scaligers*), once lords of Verona, stand in an inclosure in one of the thoroughfares. According to Forsyth, they are "models of the most elegant Gothic, light, open, spiry, full of statues caged in their fretted niches; yet slender as they seem, these tombs have stood entire for 500 years in a public street the frequent theatre of sedition." The Ponte del Castel Vecchio, built in 1354, is remarkable for an arch 161 feet in span, forming part of a circle. (*Woods*) The town-hall is ornamented external-

## VERONA.

ly with busts of the most celebrated natives of Verona, and has within it some fine paintings. The exchange; the *Museo Lapidario*, and *Philotti*, both having extensive collections of ancient monuments: the opera-house, the fine Ionic portico of which forms, with the arcades of the museum, three sides of a handsome square; the episcopal and new vice-regal palaces; the *Palazzo Bevilacqua*, an edifice by Sanmichele: the Canossa palace and several other noble residences; the lyceum, philharmonic academy founded by the Marquis Maffei, and arsenal, are among the most conspicuous edifices in the city. Verona is the seat of the high court of justice and of the superior military authorities for the Lombardo-Venetian kingdom, and of a court of primary jurisdiction for its deleg. It is a bishop's see, and has several gymnasia, a theological seminary, and numerous royal and other schools, learned societies, public and private libraries, galleries, &c. English travellers are shown what is called "Juliet's tomb," which is merely an old sarcophagus without a cover, lying in a garden where it has been made use of as a cistern.

Verona, according to Berghaus, is distinguished as the most industrious of Italian towns, "It has 60 silk twist factories, 9 establishments for weaving silks, large leather, earthenware, and soap factories, and numerous factories for the weaving of linen and woollen fabrics. Its trade is chiefly in the product of these, and in raw silk, grain, oil, sunnich, and other agricultural produce." (*Allg. Lnder*, &c.) It has two weekly markets, and two considerable annual fairs, each lasting 15 days.

Under the Romans, however, she became a flourishing city; and in the time of Strabo was superior to Brixia, Mantua, Regium, Comum, &c. She was the capital of the kingdom of Italy from the time of Odoacer to that of Berengarius; and from the 12th to the 15th century she was the capital of a considerable territory, governed successively by the Scaligers, Visconti, &c. Under the former, in the 13th and 14th centuries, occurred the feuds between the Cappelletti and Montecchi, immortalized by Shakspeare. In 1405 Verona submitted to Venice, of whose dominions it continued to form an important portion till the overthrow of the Venetian republic in 1797. In 1822 it was the seat of a congress.

Perhaps no city of Italy has given birth to a greater number of distinguished men than Verona. Among these may be mentioned Catullus,

"Tantum magna suo debet Verona Catullo,  
Quantum parva suo Mantua Virgilio."

*Maritai*, lib. xiv. epig. 195.

Macer, Cornelius Nepos, Pliny the Elder, &c., who shed in antiquity an imperishable lustre over the place of their birth. At a later period Guarini, Calderini, Funvinius, and Fracastorius contributed to the revival of literature and of the ancient fame of their native city; which in more modern times has been still further extended by the labours of the famous painter Paolo Cagliari, surnamed Veronese, born here in 1530; Bianchini, distinguished alike as a mathematician, a historian, and a critic; Maffei, whose *Verona Illustrata*, already referred to (1731-1732, in folio, and 4 vols. small 4to), is a work of the greatest research and value; the poet Piedmonte, &c.

Vitruvius, in antiquity, and the famous Julius Csar Scaliger, have also been included, though on no good grounds, among the illustrious natives of Verona. The latter, indeed, represented himself as the eldest son of one of the Scaligers, lords of Verona, and as entitled to that seigniorship! But Maffei and Tiraboschi have shown that there is not so much as the shadow of a foundation for this statement; that it is a pure fabrication; that Scaliger was, in fact, the son of a miniature-painter of the name of Bordoni; and was most probably born at Padua. (*Verona Illustrata*, p. 300; *Tiraboschi*, vii. 1481.)

VERONA, t. Oneida co. N. Y., 20 m. W. Utica, 116 m. W.N.W. Albany. Bounded N. by Wood cr., W. by Oneida lake. The Erie canal passes through it, from which the Oneida lake canal branches off. It has 17 stores, one fulling mill, one woollen factory, one glass house, two grist-mills, 20 saw-mills, four tanneries; 24 schools, 1218 scholars. Pop. 4504.

VERSAILLES, a town of France, formerly the chief residence of the French court, dep. Seine-et-Oise, of which it is the cap., in an undulating plain, 9 m. S.W. Paris. Pop. in 1836, ex. comm., 28,776. It is one of the handsomest towns in the kingdom; it consists principally of three wide streets, lined with trees, diverging from the *Place d'Armes*, an open space in front of the palace: the central and widest of these streets is called the *avenue de Paris*; and those on the N. and S., the *avenues of St. Cloud and Sceaux*. The other streets, though of less width, are equally regular, cross each other at right angles, and are lined with handsome residences. The cathedral of St. Louis, founded by Louis XV in 1743, that of Notre Dame, built after the design of Mansard, in the previous reign; the church of St. Sympho-

## VERSAILLES.

rien, the town-hall, prefecture, theatre, royal college, public library with 48,000 volumes, civil and military hospital, barracks, *dépôt* of naval and colonial archives, and hall of the *jeu de paume*, in which the deputies of the national assembly made their famous declaration (see below), are among the principal public buildings. In one of the open spaces is a marble statue of General Hoche, a native of Versailles. The town is ornamented by many handsome fountains, &c.; but it wears a dull and deserted appearance, being no longer resorted to by the *beau monde*.

Versailles is wholly indebted for its celebrity, and, indeed, for its existence, to the royal palace in its immediate vicinity. Louis XIII. had a hunting-seat here; but the present edifice, which is of prodigious size and magnificence, was erected by Louis XIV., who expended immense sums on its construction and embellishment. On the E. side where it faces the *place d'armes*, it consists of only an irregular succession of buildings, inclosing a few small courts. But on the opposite side, facing the gardens, it presents a noble facade, 645 yards in length, three stories in elevation, ornamented with Ionic pilasters, and with 80 statues 16 feet in height, allegorically representing the months, seasons, arts, and sciences, &c., and crowned by a balustrade. Its galleries and saloons, enriched with every variety of coloured marbles, and splendidly gilt, are alike vast and magnificent. The *Salon d'Hercule*, and the *Salles des Marchaux*, de *Venus*, *Diane*, *Mercure*, *Mars*, *Apollon*, *l'Abondance*, de la *Guerre*, &c., so named from the paintings on their ceilings, walls, or other appropriate devices, are all noble apartments. The *Grande Galerie* is 238 feet in length, by 32 feet in breadth, and 43 feet in height: the ceiling, painted by Le Brun, represents some of the most striking events in the early part of the reign of Louis XIV. At one of its extremities is the *Salon de la Paix*, corresponding with the *Salon de la Guerre*. Besides its innumerable apartments, the palace has an elegant chapel, in which the unfortunate Marie Antoinette was united to Louis XVI. on the 16th of May, 1770, an opera-house, or theatre, capable of accommodating 3000 spectators, a magnificent staircase, &c.

The palace has not been occupied by the court since 1789, and was getting into a state of disrepair, when it was entirely renovated and transformed by his present majesty, Louis Philippe, into what may be called a national museum, intended to illustrate the history, and to exhibit the progress of arts, arms, and civilization in France. In pursuance of this design, many small apartments, formerly appropriated to the lodging of the various functionaries attached to the court, have been converted into noble saloons. Of these, the *Salle des Marchaux*, noticed above, containing portraits of all the marshals of France, the *Galerie des Batailles*, the *Salle de 1830*, the *Galerie de Sculpture*, &c., are among the most striking. The palace is, in fact, filled with an immense collection of statues and paintings, exhibiting all the principal personages and events in the history of the monarchy, from the reign of Clovis down to that of Louis Philippe. Of course, many of these statues and pictures, must be very inferior; but these will be gradually replaced by others, and the collection is exceedingly interesting. The library is intended to comprise copies of all works having reference to the history and state of France. The fitting up of the apartments is, also, superb: and the whole reflects the highest credit on the taste and liberality of the king.

Immediately adjoining the palace on the W., is the little park, comprising the gardens, numerous reservoirs, fountains, and public walks; the orangery; *Bains d'Apollon*, and *Bassin de Neptune*, both having sculptured groups of much merit, &c. In this park are also the Great and Little Trianon, two royal palaces on a minor scale, and the grand water-works, of unrivalled magnitude, which, however, play only on great occasions. They are supplied from the Seine, by the aqueduct of Marly. The great park comprises a large tract of country, including several villages. (*Hugo*, art. *Versailles*; *Guide du Voyageur en France*, &c.)

Versailles has some manufactures of cotton yarn, and wax lights, but only on a limited scale; it had formerly an extensive factory of fire-arms, but this appears to be given up. It is the see of a bishop, and the seat of tribunals of primary jurisdiction and commerce, and of societies of literature and agriculture, &c. Philip V. of Spain, Louis XV., Louis XVI., Louis XVIII., Charles X., and several other eminent personages, were born at Versailles. It is also intimately connected with the history of the revolution. The states general met in the great hall of that palace on the 5th of May, 1789. And here, on the 17th of June, the *tiers tat*, having been joined by the whole body of inferior clergy, and some of the nobles, constituted themselves the national assembly, and the sole representatives of the people. On the 20th of the same month the deputies, finding the doors of the hall in which they had been accustomed to meet shut against them, retired to the Tennis court, and took the famous oath, by which they bound themselves to

## VERSHIRE.

continue their sittings till the constitution of the kingdom had been fixed on a solid basis! The revolution, thus fairly begun, set in with a violence which all the talent and firmness of purpose of Napoleon would, perhaps, have been unable to control, and which the vacillation of the good-natured imbecile king served only to aggravate. And so rapid was the progress of events, that on the 5th and 6th of October the palace of Versailles was forced by a mob, consisting of the lowest scum of Paris: who, in the end, succeeded in forcing off the king and his family to the capital, to encounter, at the hands of the vilest ruffians, imprisonment, every species of indignity, and an ignominious death!

VERSAILLES, t., Alleghany co., Pa., 12 m. S.E. Pittsburg. Bounded S. by Monongahela r., W. by Youghiogheny r. It has two schools, 113 scholars. Pop. 1456.

VERSAILLES, p. v., capital of Woodford co., Ky., 12 m. S.S.E. Frankfort, 534 W. Situated a little S. of the railroad from Lexington to Frankfort, to which it is connected by a short branch. It contains a courthouse, jail, several stores, and 1044 inhabitants.

VERSAILLES, p. v., capital of Ripley co., Ia., 69 m. S.E. Indianapolis, 545 W. Situated on the W. side of Laughterly cr., and contains a courthouse, jail, and about 400 inhabitants. It is surrounded by a fertile country.

VERSHIRE, p. t., Orange co., Vt., 31 m. S.E. Montpelier, 510 W. Chartered in 1781. Watered by Ompononponoseuc r. It has three churches, a Congregational, Baptist, and Free-will Baptist, two stores, one fulling-mill, one grist-mill, five saw-mills; 16 schools, 436 scholars. Pop. 1198.

VESTAL, p. t., Broome co., N. Y., 174 m. W.S.W. Albany, 289 W. Drained by tributaries of Susquehanna r., which bounds it on the N. It contains two grist-mills, 21 saw-mills; eight schools, 371 scholars. Pop. 1253. The inhabitants are extensively employed in getting out lumber.

VERVIERS, a town of Belgium, prov. Liege, cap. arrond., on the Vesdre, by which it is intersected, and which is here crossed by two stone bridges, 14 m. E. Liege. Pop., in 1836, 19,079. It is divided into the upper and lower town; some of its streets are wide and well built, but many others are quite the contrary. When erected into a town in 1651, it was surrounded with walls, but these were afterwards demolished by the French. A new church, the town-hall, and a little theatre with a front of the Ionic order, are handsome buildings. It has a tribunal and chamber of commerce, a college, hospital, and several asylums, nearly thirty public schools, a philanthropic society, bath establishment, &c. The Vesdre is divided into numerous canals, for the use of the various manufactories, which have increased rapidly since the peace. These comprise above 50 woolen cloth factories, and more than 30 dyeing-houses, with fulling and other mills, soap-works, breweries, iron and lead foundries, &c. It has two markets weekly, and four annual fairs. Great quantities of fuller's earth are dug up in the vicinity. (*Vandermaelin, Dict. de Liège*; &c.)

VESOUL, a town of France, dep. Haute-Saône, of which it is the cap.; in the valley of the Dugeon, at the foot of the Motte de Vesoul, a height covered with vineyards and meadows, 56 m. E.N.E. Dijon. Pop. in 1836, ex. comm., 5792. It is well built and clean; most of its streets are wide and straight, and it has several good public buildings, including cavalry barracks, civil and military, hospital, theatre, prefecture, parish church, public baths, courthouse, town-hall, &c. It has, also, a public library, said to comprise 21,000 vols., a museum, and a departmental nursery-ground; with manufactures of calico and gold lace, and some trade in corn, wine, salt, nails, and hardware. Near it are mineral waters, but they are turned to little account. (*Hugo, art. Haute-Saône*, &c.)

VESUVIUS (MOUNT), a celebrated mountain of S. Italy, *Ætnæ ignis imitator*, being the only active volcano, of any consequence, at present existing on the European continent; on the E. shore of the bay of Naples, and 10 m. E. by S. from the city, the crater being in lat. 40° 48' N., long. 14° 27' E. Vesuvius does not belong to the Apennine system, but rises, altogether unconnected with any of its ramifications, out of the great plain of Campania. Including Somma on its inland side, it consists of a circular mass, the extreme height of which, about 3890 ft., is to its diameter, 8 m., nearly as 1 to 11; it is somewhat less elevated than mount Hecla, and only two fifths the height, with considerably less than one third the circuit of Etna. Mr. Maclaren, by whom it has been carefully examined and elaborately described, gives the following account of its external appearance:—"To gain a distinct conception of the aspect of the hill, shape out for yourself, by a mental effort, the following objects. First, a sloping plain, 3 m. long, and 3 m. broad, stretching up, with a pretty rapid ascent, to an elevation of more than 2000 ft., very rugged in the surface, and covered everywhere with black burnt stones, like the scoræ of an iron furnace; second, at the head of this plain, and towering over it, a cone of the same black burnt stones, with sides remarkably straight and uniform, shooting up in

## VESUVIUS.

the blue sky to a further elevation of 1500 feet; third, behind this cone a lofty circular precipice (the front of Monte Somma), 1400 feet high, and 3 m. long, standing like a vast wall, and of the same burnt appearance; fourth, at the lower side of the plain, between the burnt ground and the sea, a belt of land, 2 m. broad, laid out in vineyards, but intersected every one or two furlongs by terraces of the same black calcined matter, projecting like offshoots from the central mass, and now and then unveiling old currents of lava from beneath them. Very little lava is visible; but the course of the different currents is traced by the long terraces of scoræ which cover and flank them.

"The top of the cone, which is about 2000 feet in diameter, presented the aspect of an uneven plane in the end of 1836; but when visited about five weeks after the eruption (1839) it had a regularly formed crater, shaped exactly like a tea-cup. I estimated its width at 1500 feet, and its depth at 500. The rim or crest of loose and solid matter which surrounded it was of very unequal breadth, 400 or 500 feet on the W. side, and apparently not 50 at some other parts of the circumference. Snow having fallen some days before, clouds of steam rose from the cavity, which, however, were neither so dense nor so constant as to prevent us from occasionally seeing the bottom of the crater very distinctly. It was nearly level, without crevices or openings, and covered with loose blocks of lava of no great size." (*Notes in France and Italy*, 134, 135.)

Geologically considered, Vesuvius is but the representative of a more ancient and much larger volcano, of which monte Somma is a remnant, and in the centre of which the modern vent has been upheaved. Monte Somma, on the N.E. side of Vesuvius, is a ridge extending 3 m. in length, forming about one third part of a circle, and rather less lofty than the present cone of Vesuvius. The average distance of the escarpment of Somma from the centre of the cone is about 1 m.; the back of the ridge dips outward at an angle of 96°, while the front towards Vesuvius is nearly vertical, rising 1377 ft. (420 metres) above the level space which divides it from Vesuvius, and which is called the *Atrio dei Cavalli*, or "vestibule of horses," because visitors to the crater are obliged to leave their horses, and perform the rest of the journey on foot. The *Atrio dei Cavalli* forms a segment of a circular ring, about  $\frac{1}{4}$  m. in breadth, at the base of the cone, dividing it from Somma, and having a continuation, in the shape of a depression, on the other sides, where a slight projection, called the *Pedimentata*, is supposed to indicate the place of the rest of the ancient escarpment, which, when complete, must have formed a ring 6 m. in circumference. (*Maclaren*, p. 140); being of greater extent than any crater with which we are acquainted. Hence, Mr. Lyell considers it probable that the ancient volcano was higher than Vesuvius, and that the first recorded explosion of the latter blew up a great part of the cone itself "so that the wall of Somma, and the ridge or terrace of the Pedimentata were never the margin of a crater of eruption, but are the relics of a ruined and truncated cone." This species of phenomenon has not been without an example in modern times. During the eruption of Oct., 1822, more than 800 feet of the cone were carried away by explosions, reducing the height of the mountain from about 4200 to 3400 feet. (*Forbes's Account of Mount Vesuvius*; *Lyell's Geology*, li. 80, 88, &c.)

According to Maclaren, the rocks of Somma and Vesuvius are mineralogically distinct.\* Somma, like Vesuvius, is composed of strata of fragmentary and stony matter intermixed; but the stony matter of Vesuvius consists of lava, more or less cellular, scoriaceous on the surface, and forming long narrow bands on the surface of the hill. That of Somma is a lenticle porphyry, containing shells, and continuous with the beds under the tufa which forms the soil of the plain of Naples. Mr. Lyell says, "It is an extraordinary fact, than in an area of 3 sq. m. round Vesuvius, a greater number of simple minerals have been found than in any other spot of the same dimensions on the surface of the globe. Haüy only enumerated 380 species of simple minerals as known to him; and no less than 82 had been found on Vesuvius before the end of the year 1828." Many of these are peculiar to that locality. (li. 92.) The flora of Vesuvius is also peculiar in Italy, embracing several *Euphorbiaceæ* and other plants not found elsewhere in that peninsula. The greater part of the mountain has, indeed, a bare and rugged aspect; but around its base, as previously stated, is an extremely fertile and picturesque region, teeming with plantations, villages, and white country-houses. The land here is divided into small farms of 5 or 6 acres, supporting each a whole family, and the population is esti-

\* Lyell says:—"The escarpment of Somma exhibits a structure precisely similar to that of the cone of Vesuvius. The principal point of difference consists in the greater abundance in the older cone of fragments of altered sedimentary rocks ejected during eruptions. (*Principles of Geology*, li. 89; iii. 383.) But it appears from Mr. Maclaren that later discoveries have been made. (*Notes*, &c., p. 139.)

## VESUVIUS.

rated at not less than 5000 persons to a sq. league. The land is cultivated, like a garden, with the spade; and yields three crops a year, without fallows or manure. The proprietor of the soil usually receives two thirds of the gross produce in kind for his rent. The leases are long, and the intercourse between farmer and tenant is generally mild and liberal. It is on the slope of Vesuvius that the *Lacryma Christi* is grown. This, which is a red luscious wine, is better known by name than in reality, very little of it being produced, and that little being principally reserved for the royal cellars. The *vinò Greco* and the muscadine wines of Vesuvius, are also deservedly celebrated. (*Simond's Italy*, p. 431, 432; *Henderson on Wine*, p. 240.)

Vesuvius, being so near Naples, is usually visited by strangers resorting to that city. M. Simond gives the following notice of his ascent to the mountain in 1818: "We left Portici, ascending gradually among cultivated fields and vineyards occasionally traversed by streams of old lava, black, rough, and sterile; and in 1½ hour reached the Hermitage, a convent where a few monks keep a sort of inn for the visitors of Vesuvius. Further up we traversed large fields of lava, extremely rough; and at the base of the cone prepared for the ascent over a heap of crumbling ashes and cinders, extremely steep, of course, as it formed an angle of nearly 45°. In about one hour, stoppages included, we found ourselves on extremely hot ground, intolerable to the hand, and fatal to the soles of our shoes; it teemed with hot vapours, and was covered with beautiful efflorescences of sulphur. Smoke issued from numerous crevices; at the entrance of which a piece of paper or a stick took fire in a few seconds; and, what seems strange, a stone thrown into one of these openings increased the smoke at all the others. Stooping low, we could hear a noise very like that of a liquid boiling. The hard but thin crust upon which we stood appeared to have settled down in some places; a woful indication of its hollow state. After a few steps more we came to the edge of a prodigious hole, on the very summit of the cone, being the crater formed by the last eruption, four months previously. This hole was not by any means the tremendous thing we expected—a fathomless abyss, fiery and black, with lava boiling at the bottom—but a slope of grey ashes and cinders, much like that by which we had ascended, or scarcely more precipitous, and ending, at the depth of 400 or 500 ft., in a level place, with grey ashes like the rest." The view from the summit is far inferior in extent and magnificence to that from Etna, but is, notwithstanding, extremely various, rich, and beautiful. The whole ascent and descent to and from Naples may be readily accomplished in seven or eight hours. (*Simond's Trav.*, p. 421-423; *Eustace, Class. Tour*, iii., 23-25; *Starke's Guide*, &c.)

From the period of the earliest records down to the reign of Titus Vespasian, the volcano seems to have been inactive; the appearance of its crater and its cavernous structure being the only indications by which Strabo conjectured that it might at some distant period have been on fire! But in the first year of the reign of Titus (A.D. 79), the volcano that had so long been dormant burst forth with renewed and tremendous energy, in one of the most destructive eruptions of which history has preserved any account. The large and flourishing cities of Herculaneum and Pompeii, near the sea, were both overwhelmed by its lavas and ashes! Even the figure of the coast was materially changed; and for the space of more than 1600 years all trace of the buried cities was completely lost, and they were only accidentally discovered in the course of last century. The elder Pliny lost his life during this dreadful eruption, which has been described by the younger Pliny, by whom it was witnessed (*Epist.*, lib. vi., 16 and 20), and by Tacitus. *Lucan*, says the latter, *atituli atrox et continuus tremor terra, quem secuta est horrenda Vesuvii montis conflagratio. Pulcherrima Campaniæ ora miserè fedata: obrute duæ urbes Herculaneum et Pompei: vasta hominum strages, quos inter periit Agrippa ejusque mater Drusilla. At studiorum famâ mors C. Plinii fuit insignior.* (*App. Chron.*)

Since the destruction of Herculaneum and Pompeii there have been 45 authenticated eruptions; but, luckily, none of them have been equal to it in destructive power. Of those which happened down to the 12th century, we have few accounts; and from 1138 to 1631 there were but two slight eruptions: during this interval, however, Etna was in a state of great activity, and the formation of monte Nuovo, &c., in the Phlegrean Fields took place. In 1631 a violent eruption occurred, during which seven streams of lava poured from the crater; and from 1666 to the present time, there has been a series of eruptions, the longest intervals between them having rarely exceeded ten years: the last was in January, 1839. The energy of Vesuvius, when in action, is extremely great, and the spectacle highly magnificent and sublime. In the eruption of 1779, Sir W. Hamilton says that jets of liquid lava were thrown up to the height of at least 10,000 ft.: having the appearance of a

## VIATKA.

column of fire; and in that of 1793, according to Dr. Clarke, millions of red-hot stones were shot into the air to full half the height of the cone itself, and then bending, fell all round in a fine arch, covering nearly half the cone with fire. The lava, however, does not always issue from the crater at the summit, but, as in Etna, sometimes from small cones raised in various parts of the declivity; and occasionally three or four of these cones are in a line, which generally points towards the great crater. The eruptions of 1760, 1794, and 1834, were of this description. (For further details, we beg to refer the reader to *Sir W. Hamilton's Observations on Vesuvius*, and his *Campi Phlegreæ*, and to the works of *Clarke, Scrope, Dufrenoy, &c.*, with those of *Maclaren, Simond, Eustace, Kampoldi, &c.*)

VETERAN, p. t., Chemung co., N. Y., 11 m. N. Elmira, 190 m. W.S.W. Albany. Drained by the inlet of Seneca lake, which affords water-power. It has five stores, five tanneries; seven schools, 468 scholars. Pop. 2379.

VEVAY, p. t., capital of Switzerland co., Ia., 94 m. S.E. Indianapolis, 514 W. Pleasantly situated on the N.E. bank of Ohio. It was early settled by emigrants from Switzerland, who successfully attempted the cultivation of the vine, and it presents a pleasing assemblage of gardens, orchards, and vineyards, where taste and elegance are combined with use and comfort. It contains a courthouse of brick, a jail, seven stores, a printing-office, 200 dwellings, many of them brick, and about 1300 inhabitants. It presents a very pleasant appearance to those navigating the Ohio, and is regarded as one of the most interesting sites on the river.

VIATKA, a government of European Russia, chiefly between the 56th and 60th degs. of N. lat., and the 46th and 54th of E. long., having N. Vologda, E. Pern, S. Orenburg and Kasan, and W. Nijni-Novgorod, and Kostroma. Area estimated at about 52,900 sq. m. Pop., in 1838, 1,511,600. The slope of the country is towards the W. and S. in which directions the Viatka, a tributary of the Volga, flows, traversing the government nearly in its centre. The Kama, which forms part of its E. and S. boundaries, also rises in this government. Surface generally undulating, and even mountainous towards the E., where it consists of the lower Ouralian ranges. The soil is mostly good, though encumbered in parts with extensive marshes. Climate severe in winter, but not usually unhealthy. Agriculture is the principal occupation of the inhabitants, particularly along the banks of the large rivers; and in ordinary years an excess of corn is grown. Rye, barley, and oats, are the principal grains; very little wheat is raised, but pease, lentils, and buckwheat, are grown, with large quantities of hemp and flax. The surplus produce goes chiefly to the N. Russian provinces. Potatoes are not much cultivated. Fruit is not plentiful; apples scarcely ripen. The forests are very extensive, they consist mostly of firs, intermixed with oak, elm, alder, lime, birch, and other trees. Cattle breeding, though a secondary branch of industry, is still of importance; and a good many small but robust horses are reared. Sheep are few. Furs, tar, iron, and copper, are among the chief products. Manufactures, though not extensive, appear to be on the increase: in 1832, there were 62 factories for woollen cloths, linen and cotton stuffs, paper, soap, potash, copper, and iron wares, &c., employing between 6000 and 7000 hands. About two million archines of woollen, and perhaps nearly double that quantity of linen cloth, are supposed to be annually made in the houses of the peasantry; and large quantities of spirits are distilled. Near Sarapoul is an extensive manufactory of arms, and at Votka anchors, gun carriages, and iron machinery of various kinds are made on a large scale. The government exports corn, flax, linseed, honey, tallow, leather, firs, silk goods, iron, and copper, to Archangel, and corn and timber to Saratof and Astrakhan. It receives manufactured goods from Moscow and Nijni-Novgorod, tea from Irbis, and salt from Pern. Viatka, the capital, is the great emporium of the trade. It is subdivided into 11 districts; Viatka, Slobodskoi, and Sarapoul, being the chief towns. The inhabitants consist of various races; Russians, Votiks (of a Finnish stock, and from whom the prov. has its name), Tartars, Baschkirs, Tatars, &c., professing many different religions. The Mohammedans are estimated at nearly 50,000; and the Shamans and idolators at 3500. In 1831, there were only nine public schools, in which 1153 pupils were receiving instruction; but the number has since materially increased. This government is united under the same governor general with Kasan: but the Tartars and Finns are subordinate to the jurisdiction of their own chiefs.

VIATKA, a town of European Russia, cap. of the above gov.; on the Viatka, near the confluence of the Tehepsa, 230 m. W. by N. Pern, and 250 m. N.E. Nijni-Novgorod. Pop. 6890. (*Passart*.) It has several stone churches, one of which, the cathedral, with a silver altar ornamented with bas-reliefs, cost 130,000 roubles. Here are numerous convents, with an episcopal seminary, gymnasium, and

## VICENZA.

high school, founded in 1829. It was annexed to Russia by Ivan Vasiliewitch, about the middle of the 16th century. (*Schnitzler, La Russie; Possart, Das Kaiserthum Russland, &c.*)

VICENZA (an. *Vicentia*, or *Vicetia*), a city of Austrian Italy, cap. deleg. of its own name, on the Bacchiglione, where it receives the Retrone, 26 m. E.N.E. Verona, and 37 m. W. by N. Venice. Pop., in 1837, 20,683. (*Berghaus*.) Though surrounded by dry moats and dilapidated walls, it is one of the best built cities of Italy. It has an astonishing number of well-designed houses, many of which are of very fine architecture; and even those which are less deserving of praise would, from their number and the richness of their ornaments, produce a great appearance of magnificence in the city, if they were well kept up; but they appear forlorn, neglected, and half uninhabited. (*Wood's Letters, &c.*, i., 238.) Vicenza, says Forsyth, "is full of Palladio," the modern Vitruvius, born here in 1518, who has lavished all his skill on his native place. Besides about 20 palaces, the townhouse, or *basilica*, the church of Sta. Maria del Monte, the Rotunda, the Olympic triumphal arch leading to the Campo Marzo, the theatre of the Olympic academy, &c., are the works of this architect. The most celebrated of these is the Olympic theatre, a noble edifice, constructed upon the plan of the ancient theatres, and bearing a great resemblance in all essential particulars to those of Herculaneum and Pompeii. It is fully described by Eustace, who states that the palatial edifices of Vicenza, though inferior in materials and size to those of Genoa, are much superior in external appearance. (*Class. Tour*, i., 132-5.) The Vicentine villas, which have been often imitated in England, are as beautiful as the larger buildings within the city. Many of them are on the Monte, a pleasant hill adjacent to the town, the favourite resort of the Vicentine gentry, and whence an extensive and rich view is obtained of the great plain of Lombardy. Vicenza has few Roman antiquities, and not many interesting specimens of middle-age architecture. The cathedral has a front exhibiting a mixture of different styles, and its interior presents a nave only, which is of great width; neither the length nor height being in proportion. The church of St. Corona has a fine "Adoration of the Magi," by Paul Veronese; the church of St. Lorenzo is now converted into a barn. All these buildings are in the pointed style, which prevailed in this part of Italy during the 13th century, and of which the church of St. Anastasia at Verona is one of the finest examples. (*Woods*.) Nine bridges cross the different rivers at Vicenza, one of which, the *Ponte de Sammichele*, is by Palladio, and, according to Rampoldi, may be compared with the Rialto at Venice.

Vicenza is a bishop's see, the seat of the council, and of the superior courts for the deleg., and has a lyceum, two gymnasiums, an ecclesiastical seminary, and many inferior schools, eleven hospitals and orphan houses, a government pawn-bank, public library, societies of agriculture, &c. The Olympic academy was founded in 1555, for the encouragement of polite literature, and still, as formerly, includes the most respectable citizens. (*Eustace*.) Some of the palaces have a few fine paintings; but they were mostly carried off by the French.

The Vicentines are said to manifest an aptitude for manufactures; and are, perhaps, inferior in industry only to the inhabitants of Verona. They weave silk and woollen fabrics, and make leather, whalebone articles, earthenware, hats, gold and silver articles, fire engines, &c., and have a considerable trade in agricultural produce. "As you enter the Vicentine territory," says Mr. Rose, "you may observe a visible improvement in the mode of cultivation. The fields are kept cleaner, and everything indicates superior industry and exactness. If we except the resemblance of dialect, and some community of trifling customs, Calais and Dover are not more unlike than Padua and Vicenza, long subjected to the same government, and connected by facilities of communication both by land and water. To say nothing of the outward appearances of the two cities, which present a most remarkable contrast, it would seem as if the inhabitants were of different blood—as if a colony of Venetians, making a knight's move, had leaped over Padua and established themselves at Vicenza." (*Letters from the N. of Italy*, i., 154, 155.)

Vicentia was anciently a Roman *municipium*, but one of little consideration. (*Tacit., Hist.*, iii., 8.) It was sacked by Alaric in 401, and successively pillaged by Attila, the Lombards, and the emperor Frederick II. Early in the 15th century it came into the possession of the Venetians, who held it till the downfall of the republic in 1796.

Napoleon conferred the title of Duke of Vicenza on Caulincourt. (*Rampoldi; Austr. Nat. Encycy.; Woods; Forsyth; Eustace, &c.*)

VICH (an. *Ausona*), a town of Spain, in Catalonia, prov. Barcelona, in an undulating plain, 36 m. N. Barcelona. Pop. 12,500. (*Miñano*.) It is of a very irregular figure;

## VIENNA.

some parts of it are well built, and two of its squares are handsome. The cathedral is very mediocre, and is, indeed, inferior in many respects to the other churches. It has numerous convents, a seminary, college, and several hospitals, with manufactures of linen and hempen fabrics, printed cottons, woollen cloths, hats, and leather. (*Miñano; Dict. Geog.*)

VICKSBURG, city, capital of Warren co., Miss., 41 m. W. by N. Jackson, 1051 W. Situated on the E. side of Mississippi river, 400 m. above New-Orleans, and immediately below the Walnut hills. The city is situated on the shelving declivity of high hills, and the houses are scattered in groups on the terraces. It is surrounded by a fertile country, and, though recent in its origin, it has become a large and flourishing place. A number of boats are always lying in the harbour, and a great quantity of cotton is shipped here. It contains a courthouse, jail, four churches, a Presbyterian, Episcopal, Methodist, and Roman Catholic; three academies, two male and one female; 50 wholesale grocery and commission stores, 50 retail dry goods stores, a printing-office, and about 3104 inhabitants. Steamboats regularly ply between this place and New-Orleans, and a railroad extends from Vicksburg, through Jackson, to Brandon.

VICTOR, p. t., Ontario co., N. Y., 12 m. N.W. Canandaigua, 351 m. W. by N. Albany, 205 W. Drained by Mud creek. It contains three churches, a Presbyterian, Methodist, and Universalist; three stores, two fulling-mills, two woollen factories, three flouring-mills, four grist-mills, six saw-mills, one tannery, one distillery; one academy, 25 students; 12 schools, 671 scholars. Pop. 2303.

VICTORY, p. t., Cayuga co., N. Y., 20 m. N. Auburn, 160 m. W.N.W. Albany, 352 W. Drained by Sodus creek. It has four stores, one fulling-mill, two grist-mills, six saw-mills, two tanneries; one academy, 30 students, 18 schools, 556 scholars. Pop. 2371.

VIENNA (Germ. *Wien*, Lat. *Vindobona*), a city of Germany, cap. of the Austrian empire, prov. Lower Austria, on an arm of the Danube, where it is joined by the small rivers Wien and Alster, 190 m. E. Munich, 330 m. S.S.E. Berlin, and 800 m. N.W. Constantinople. Lat. of the observatory, in the centre of the city, 48° 12' 33" N.; long. 16° 22' 45" E. The pop., which in 1815 was about 250,000, had increased, in 1840, including the garrison of about 15,000 men, to 357,927, and may now (1842) be estimated at above 360,000.

The Danube, opposite Viennä, is divided into three or four separate arms, the most southerly of which washes the walls of the city. Between the third and fourth of these arms, however, is the important suburb of Leopoldstadt, with the Prater, the Augarten, and several other favourite promenades. This part of Vienna communicates with the city and the suburbs on the S. side of the Danube, by five bridges, of which the Ferdinands Brücke, in the centre, is the chief. Viennä stands in a plain, elevated about 520 feet above the level of the sea; but so little above that of the Danube in this part of its course, that, with the exception of its S. extremity, which is on the gradual ascent to the heights of Kahlenberg, most part of the city is liable to inundations. Vienna is of a nearly circular form, being about 10 m. in circumference. The city-proper, in the centre, is, however, scarcely 3 m. round. It is enclosed by ramparts of brickwork, and a beautiful glacis from two to three furlongs broad, planted with trees, laid out in public walks, forming, like the parks in London, the lungs of the metropolis; these separate the city from its numerous suburbs, which, on the S. side of the Danube are again enclosed by a line of ramparts, originally thrown up in 1703, where the passports of travellers are demanded.

Vienna, from its size, wealth, population, and activity, deserves to be compared with London and Paris better than any other European capital. It chief points of external difference from these cities are that it preserves about 10 more antique grandeur, and that it is the old and not the new parts of the town which form the fashionable quarters. Most part of the principal edifices are within the city, where the houses are usually four or five stories high, and the streets irregular, narrow, and dark; but where the imperial family and most of the nobility reside. "Nearly all the best shops, principal hotels, &c., are also in this quarter. In the suburbs, however, are several of the palaces and garden-villas of the higher nobility, including those of Princes Liechtenstein, Esterhazy, Schwarzenberg, Anersberg, Metternich, &c.; the Belvidere palace, built by Prince Eugene, but appropriated by Joseph II. to the imperial picture gallery, and other public institutions; with immense barracks, magazines, and other military establishments, hospitals, &c. The streets in the suburbs are generally broad and straight; but some of them, being unpaved, are in wet weather dirty and muddy. The thoroughfares in the city proper are, on the contrary, uniformly clean, and well paved; but no part of the capital has as yet the advantage of footpaths.

## VIENNA.

The houses, both in the city and suburbs, are in general huge edifices, and, as in Paris, are built around court-yards, and occupied by many different families. Some of these dwellings are of enormous extent, and quite towns in themselves. Prince Esterhazy has one comprising 150 different sets of apartments, and yielding a revenue of £1600 to £2000 a year: and one belonging to the Stahrenberg family is said to be inhabited by 2000 persons, and to produce a rental of £4000 a year! (*Russell's Tour in Germany*.) The Burgher Spital, formerly a hospital for citizens, was converted by Joseph II. into a dwelling-house: it is six stories high, has 10 courts and 20 staircases; and several other houses are of equally colossal dimensions. No city in Europe has so large a number of resident nobility as Vienna: 24 families of princes, 70 of counts, and 60 of barons make it their home for the greater part of the year. These nobles may perhaps have fortunes of from 100,000 to 500,000 florins a year, and several, as Prince Esterhazy, Liechtenstein, &c., considerably more. Here, also, many private gentlemen spend 50,000 florins a year; and, with the exception of those of London, the citizens of Vienna are the richest in the world. Berlin and Dresden may, perhaps, have more cornices, pillars, and handsome public buildings, and in Munich and Paris these may have a more imposing effect, but in none of these, capitals are there so many noble and extensive, private edifices. The Herengasse and other streets near the imperial residence are full of palaces of the higher nobility. These, as in London, frequently extend along narrow thoroughfares, and are not distinguished from humbler residences except by their greater size and elevation; their interiors are sumptuous.

Nearly all the so-called squares of Vienna are within the city. They are irregular, and comparatively small open spaces, none being so large as Waterloo-place: the cathedral stands in the centre of St. Stephen's platz, and the Graben is an incessant thoroughfare, and may be looked upon as the Charing cross or Mansion-house place of Vienna. Most of these open spaces are ornamented with one or more monuments, or fountains. These, however, are not always in good taste. In the Joseph platz is a fine equestrian statue of Joseph II., by Zanner. "The emperor, the resemblance to whom is said to be very striking, is attired in the Roman costume, and crowned with laurel; with one hand he curbs the impetuosity of his steed, and the other he extends to his people. The statue reposes on an elevated pedestal of granite, bearing the inscription *Sa luti publico vixit non diu sed totus*; and which, with its attendant pilasters are adorned with medallions, representing, not the remarkable events of his life, but his travels! It was erected by the late emperor, Francis II." (*Spencer's Germany*, &c., ii., 134.) But, except this, Vienna has no other statue of her great men or benefactors; there is none of Montecucculi, Prince Eugene, Lacy, Laudohn, Louis of Baden, or John Sobieski; none of Daun or Kaunitz, Von Swieten, Mozart, or Haydn. In respect of such memorials, Berlin, and even London, are far before Vienna. In her bridges Vienna is also immeasurably behind London and Paris, having none worth notice. The Danube is here nowhere much more than 60 yards across; being, also, a sluggish and muddy, though a navigable stream. The Wien is little better than a mere filthy ditch. The drainage of the town is effected by good underground sewers.

*Public Buildings, &c.*—The chief of these is the cathedral of St. Stephen, almost in the centre of the city, and from which the principal thoroughfares diverge. It is an elegant Gothic building, ranking in elevation and richness of architecture with the cathedrals of Strasburg and Antwerp. Its length is 350 ft., and its greatest breadth 220 ft. Flanking its great W. doorway are two towers, the remains of the original church, constructed in 1163 and at the angles of this front are two magnificent piles of a similar kind, though only the most southerly has been finished. This tower and spire is 450 ft. in height, or barely 16 ft. lower than that of Strasburg; it has a bell weighing 357½ cwt., cast from cannon taken from the Turks, and declines towards the N. about 3 ft. from the perpendicular. The exterior of the cathedral has a good deal of rich tracery. Within are some good wooden carving, a few good pictures, the monuments of Prince Eugene, the emperor Frederick III., &c., and a gorgeous chapel of the Liechtenstein family; but, on the whole, its interior is but little decorated. A crypt beneath it served for three centuries as the burial-place of the imperial family: at present, however, only parts of their viscera are preserved here; their hearts being deposited in the Augustine church, and the rest of their bodies in that of the Capuchins. The church of the Augustines is one of the handsomest in Vienna, and contains the monument of the archduchess Christine, one of the finest works of Canova; besides those of Leopold II., Daun, Von Swieten, &c. The church of St. Charles Borromeo is an imposing edifice, in the Byzantine style; Me-tastasio is buried in that of St. Michael, and the Carnelite

church has some fine stained glass. Vienna has, in all, nearly 60 churches, a third part of which are in the city; 17 conventual establishments, a Scotch Lutheran, three Greek churches, and two synagogues.

The Burg, or imperial palace, occupies a large extent of ground in the S.W. quarter of the city. It is externally a gloomy and shapeless congeries of buildings, erected from the 14th to the 17th century, on a par, Mr. Spencer says, in point of architecture, with St. James's. It comprises extensive suites of rooms; though these, in the simplicity of their furniture and decorations, show the unostentatious habits of the Austrian princes. The state-apartments, with their ancient gilding, and faded velvet hangings, remain in the same condition as in the time of Maria Theresa. But the palace has some fine collections in art and science. The imperial library, which comprised, according to Balbi, in 1835, 284,000 printed volumes, and 16,000 MSS., is placed in a handsome edifice built for the emperor Charles VI., whose statue, with that of many other Austrian monarchs, is placed in the centre of the grand hall, an apartment 240 ft. in length, by 45 in width and 62 in height, with a fine dome rising 30 ft. above the ceiling. The library increases by about 3500 volumes a year, a copy of every work published in the empire being deposited here; besides which, a fund of nearly £2000 a year is spent in the purchase of new works. This library is open to the public without introduction for five hours a day. It has, among other curiosities, an act of the Roman senate prohibiting the *bachanalia*, engraved on bronze, and bearing date A.U.C. 567 (or B.C. 186); the 5th decade of Livy, a unique MS.; the Peutingerian Table, a military map of the Roman empire in the 4th century; several MSS. of succeeding centuries, the earliest book printed with a date; the MSS. of the *Gerusalemme Liberata*, &c. Here, also, are collections of music and engravings, the last comprising about 300,000 pieces. The museum of antiquities comprises a cabinet of medals, second only to that of Paris, and an unrivalled collection of intaglios and cameos. One of the latter, representing the apotheosis of Augustus on an enormous sardonyx, is supposed to be the finest existing; and the coins and medals amount to 80,000, including 13,000 Greek, and 23,000 Roman. (*Turner; Murray's Handbook*.) The collection of ancient sculpture is far inferior to the collections of either Dresden or Munich; but there are excellent museums of natural history and botany, and the cabinet of minerals surpasses every other in Europe. Here are also Egyptian and Brazilian museums, a good collection of Greek vases, and the imperial jewel-office; in which, including a number of relics, are the Austrian and Hungarian regalia, the Florentine diamond, the iron crown sceptre, &c., of Charlemagne, the sword of Tamerlane, &c.

The Belvedere palace is appropriated to the Ambras museum, and to one of the finest collections of paintings in Europe, being especially rich in works of the Flemish and German schools. The Ambras museum, formed late in the 16th century, includes, besides other curiosities, a most interesting historical collection of armour. The paintings in the Imperial gallery are classed in separate rooms, according to schools. In those of the Italian schools are the famous *Ecc Homo* of Titian, formerly belonging to Charles I. of England; a superb Holy Family by Raphael; many other pictures by these artists, and by P. Veronese, the Caracci, S. Rosa, &c. In those of the Flemish school are three masterpieces by Rubens: St. Ignatius driving out evil spirits; St. Ildefonso; St. Ambrosius closing the church door at Milan against the Emperor Theodosius; some of the best works of Rembrandt and Vandyck; and pictures by Teniers, Cuyt, G. Dow, &c. Other rooms are appropriated to the German, Austrian, and Spanish schools, works of the middle ages, a comparative series of Italian paintings from the 14th to the 9th century. In the Belvidere gallery is the mosaic copy of Da Vinci's Last Supper, for which Napoleon engaged to pay 15,000 zecchinos, and which was afterwards bought for the same sum by the late Emperor Francis II. At Dresden," says Mr. Turnbull, "the gallery comprises perhaps the grandest *ensemble* in Europe, but is so neglected, so involved in gloom and dirt, as to afford too often a feeling more akin to pain than to pleasure. At Berlin, the condition, care, and arrangement, are perfect, but the works themselves are rarely first-rate specimens. The gallery of Vienna is good alike in intrinsic excellence, in order, and in condition. Of the museums generally, as, indeed, of most of the institutions under the Austrian government, the high and eminent excellence is their admirable adaptation to practical utility. In those of other countries we had seen articles of greater individual rarity; entire assemblages of certain branches, more copious and complete; but in no one were the various objects, to our apprehension, so ably and lucidly arranged, labelled, described, and exhibited, as at Vienna; and this, too, in a city where space and light are so defective. They are fully exhibited to the public, du-

## VIENNA.

ring a convenient number of hours; and the student has ample opportunity of following up his researches therein, in connexion with lectures gratuitously afforded on the principal branches of science." (*Turnbull's Austria*, i., 236-238.)

The imperial arsenal has one of the richest armouries in Europe. In the upper rooms 150,000 stand of arms are kept; and, besides a large store of weapons and armour of different dates, we have here the buff coat worn by Gustavus Adolphus at the battle of Lutzen, the arms of Marlborough, Eugene, Stahrenberg, and Montecuculi, numerous standards, the enormous chain thrown across the Danube by the Turks in 1529, &c. The city arsenal is a fine building, constructed by the citizens at their own expense, and has, with many curiosities similar to the above, arms sufficient for 25,000 civic guards. The imperial riding-school is also a handsome edifice by Fischer of Erlach, but lost among the buildings of the palace. The Royal Stallung, in the suburbs facing the Burg-thor, is a noble palace appropriated to the Royal Hungarian guard.

Vienna has five theatres; the principal are, the Hof-theatre attached to the palace, and that at the Kärnthner-thor (*Carinthian-gate*). The first is devoted solely to the performance of the regular German drama; and, though not the largest, is by far the finest theatre in Vienna. It is both clean and well lighted, and is said somewhat to resemble Drury Lane. The acting here is at least equal to that at Berlin; and the performers have, after ten years' service, a handsome pension settled on them for life by the government, with an annuity after their death for their widows. (*Strang's Germany*, ii., 253.) The Kärnthner-thor is the opera-house of Vienna, and the singers and orchestra are unsurpassed in Germany. This house is very large, having six complete rows of boxes and a half circle next the pit; but the largest theatre is one on the Wien, appropriated to equestrian pieces. The really national theatre of the Viennese is the *Baym Casperl*, in the Leopoldstadt. This theatre, the *Adelphi* or *Ambigu Comique* of Vienna, is appropriated to farces, and is the arena in which the national character is painted in the most lively colours and broadest manner. Here, says Mr. Strang, one circumstance is noticeable, as indicative of the power of "the million," even in Austria. The police, though exceedingly strict in the regular theatres, are said to *wink hard* at the political jokes that are frequently cracked on this stage; while the pulse of the public is not unfrequently felt here, by somewhat the same means as the old council of ten used to adopt at Venice, through the tricks and colloquies of Punchinello. (*Germany* in 1831, ii., 255, 256.)

Vienna has several handsome gates, the chief of which is the Burg-thor, near the palace; but none is comparable for magnificence to the Brandenburg gate, Berlin. Indeed, every object brought under public observation appears externally more splendid, elegant, and attractive in the Prussian capital; "yet it is merely as shadow to substance, for in Vienna, behind dark walls, there is far more sterling value than in the finest palaces of its rival." (*Spencer's Germany*, &c., ii., 133.)

*Schools, Libraries, Galleries, &c.*—Vienna has a university, founded in 1237, but which was wholly remodelled by Von Swieten in the time of Maria Theresa. It is celebrated on the continent as a school of medicine, and is probably attended by a greater number of students than any other German university, except that of Berlin: in 1832 it had 1619 students, of whom 309 studied divinity, 332 law, 519 medicine and surgery, and 459 philosophy, &c. (*Journal of Education*, vol. ix.) There are between 70 and 80 professors, all of whom are paid by government, and are neither permitted to receive fees on their own account, nor to give private lessons. The theological, surgical, and veterinary courses are delivered gratuitously; but the student has to pay a fee of 18 florins (about £1 11s. 6d.) for attendance on the lectures in philosophy, and of 30 florins (£2 12s. 6d.) for attending those in medicine and jurisprudence. The whole amount of the moneys thus paid for tuition during the session is expended in stipends to indigent students, and divided among them, without reference to their religious creeds, in allowances varying from 50 to 150 florins (£4 10s. to £13 10s.). Nearly all the lectures are delivered in the German language. The university has a library of above 100,000 volumes, and £150 a year is expended in the purchase of new works, and it receives, gratis, a copy of all works printed in Lower Austria. (*Journal of Education*, 1834; *Statistical Journal*, 1841.) An observatory, and a botanic garden, are attached to this establishment.

The Polytechnic Institute, a handsome structure facing the glacis, was founded by the Emperor Francis in 1816, to afford instruction in the practical sciences, arts and commerce; and a few years since had about 750 pupils and 35 masters. Besides the ordinary branches of knowledge, the pupils are taught the history of commerce, the knowl-

edge of merchandize, mercantile law, and correspondence, natural history and chemistry as applied to commerce, the art of drawing, mathematics, &c.; for which instruction the pupils pay only three florins a month, and, for a small extra sum, are taught Latin, English, French, and Italian. Among other collections, this school has a museum of the products of arts and manufactures, both Austrian and foreign, and a valuable library. The *Theresianum*, for the sons of the aristocracy, and the normal school of St. Anne, were both established by Maria Theresa. The former was suppressed by Joseph II., but restored by Francis; and it has now a library of 30,000 printed volumes, besides MSS. and pamphlets. Joseph II., established both the Oriental academy and the *Josephum*; the latter, an institution for the education of army surgeons, which has attached to it a hospital capable of receiving 1200 patients, a collection of anatomical figures in wax, by Fontana, &c. Besides these establishments Vienna has a special seminary for the education of the secular clergy, a Protestant seminary, founded in 1821; six military colleges, with nearly 1000, and 49 minor establishments for military education, with nearly 3000 pupils; an academy of the fine arts for about 1300, and a musical academy for 200 students; besides about 60 inferior public schools. (*Journal of Educ.*, &c.)

In addition to the libraries already mentioned, the Archduke Charles has one of 25,000 volumes, Prince Liechtenstein of 40,000, Prince Metternich of 23,000 do., Prince Esterhazy of 20,000, exclusive of many inferior collections. But with all these appliances for knowledge, Vienna cannot be considered so much a resort of learning as of the fine arts. In paintings she is, perhaps, the richest capital of Europe. The gallery of Prince Liechtenstein consists of 25 splendid apartments, filled with exquisite originals of the Italian, Flemish, French, and Dutch masters, including *chefs d'œuvre* of Raphael, Guido, Rubens, Vandeyck, Dominichino, Guercino, Claude, S. Ross, Carlo Dolce, &c. The Esterhazy gallery contains upwards of 600 pictures, of which 54 are by Spanish masters, whose works are rarely found out of Spain; with a collection of sculptures, including works by Canova and Thorwaldsen; 50,000 engravings, &c. Counts Czernin, Schönborn, Harrach, Lemberg, and many other noblemen, have collections of choice paintings; and in the palace of the Archduke Charles is a collection of 160,000 engravings. The foregoing galleries are all open to the public at stated times. (*Balbi, Essai sur les Bibliothèques de Vienne*, p. 84-113.)

In statuary, also (though not in public statues of celebrated men), Vienna is very rich. Canova's group of Theseus killing the Centaur deserves especial mention. It was originally intended by Napoleon to surmount the grand arch at Milan, but is now placed in the Theseum, a Doric temple, on the Volks-garten, in imitation of the temple of Theseus at Athens. "This group is of Carrara marble. The hero is in the act of grasping with his left hand the throat of the Centaur; while his right arm, raised behind his helmeted head, clenches the club with which he prepares to inflict the fatal blow. The whole character of the group is in Canova's most effective style." (*Turnbull*, i., 242.)

*Hospitals and other Charities.*—Few capitals are so abundantly furnished with charitable institutions as Vienna. Many of the principal, as the general hospital, house of invalids, deaf and dumb asylum, &c., were founded by Joseph II. The general hospital is a vast building, ranged around seven quadrangles, having 2000 beds. It is said to receive annually from 10,000 to 16,000 patients. It partly answers the purpose of a *sanatorium*, there being separate bed-rooms, which, with medical attendance, and every comfort necessary for an invalid, are within the reach of persons of limited income, on the payment of a small sum daily. The hospital of the charitable brethren, supported partly by voluntary contributions, is a monastic establishment, but open equally to Jews, Turks, and Christians of all persuasions.\* The house of invalids is similar in its kind to Chelsea hospital, having been founded for 800 old soldiers. In its great hall there are two large pictures of the battles of Leipsic and Asperne. The deaf and dumb asylum is well conducted; and those among the pupils who evince intelligence are often afterwards employed in state affairs requiring secrecy. There are schools for the blind, &c., and a lunatic asylum, which is, however, said to be not so well conducted as most of the other public establishments. Attached to the general hospital are the *maison d'accouchement* and foundling hospital. In the former of these "not even the name of the applicant is demanded; she may enter veiled or masked, and remain incognito the whole time she continues in the house; she

\* It may be remarked here, that there is an increasing tendency towards religious toleration (in Vienna at least) in the Austrian government. Mr. Strang believes that there is a real inclination on the part of those in power in Austria to tolerate every kind of religious belief, provided it be not accompanied with offensive sectarian zeal.

## VIENNA.

was merely to deliver a sealed paper to the superintendent, containing her name and real address, that, in the event of death ensuing, her relations may be apprised of her fate." (*Spencer*, 163.) The person who brings a child to the foundling hospital receives a ticket, by presenting which, the child may at any time be reclaimed; if it be not taken away, it is, at the proper age, brought up to some employment. It is probable that an institution of this kind may prevent a few cases of infanticide; but the mortality in this, as in all similar institutions, is quite excessive, and there can be no doubt that it acts as a powerful incentive to vice and immorality.

*Commerce, Hotels, Shops, &c.*—Vienna is the great emporium of the Austrian provinces N. of the Alps, and an important *dépôt* for the interchange of goods between E. and W. Europe. According to Becker, there were in Vienna, in 1834, 547 silk and velvet, and 340 cotton cloth manufacturers, 24 cotton-printing establishments, and many cotton mills. The porcelain manufacture of Vienna is among the most celebrated on the continent, and it has an imperial cannon foundry, and a manufacture of small arms, said to employ 500 workmen. Cutlery, watches, and jewellery, bronze and other metallic goods, meerschaut pipes, musical instruments, paper, chemical products, gloves, leather, hosiery, chocolate, and liqueurs, are among the other principal products: it has several large printers and music engravers. Many of the most wealthy mercantile houses belong to Greeks. The national bank of Vienna, established during the seven years' war, is divided into 51,620 shares. In 1837 it made a net profit of 3,943,303 florins, being at the rate of 77 florins a share. It discounts, advances money on pledges, negotiates bills of exchange, &c., and is said to be very well managed.

The hotels are of two classes: living in those of first-rate excellence costs about one third more than in Paris; but those of the second class are very good of their kind. Lodgings are twice as dear in the city as in the suburbs, where a room tolerably furnished may be had for 6 florins a month. The *cafés* of this city are not decorated with the same splendour as those of Paris, but they are quite as much frequented, being resorted to in the evenings by both sexes of the middle classes, and at other times by gentlemen to play at billiards, or to smoke, which is not permitted in the streets. (*Murray's Hand Book*, &c.)

From their number being limited by government, the profits realised in the coffee-houses are great, and they frequently bear a value so high, that Russell mentions one on the Graben, for the privilege belonging to which a purchaser paid upwards of £3000 in addition to an extravagant price for the house itself. (ii., 245.) Vienna is well supplied with provisions of all kinds, which are generally cheap. House rent is said to be lower than in Paris; servants' wages are much less; furniture is still cheaper; and a pair of good Hungarian carriage horses, the keep of which will cost about £30 a year, may be bought for £40. "No town exhibits such an appearance of people living amidst plenty, such an absence of uneasy classes, and of anything that can represent poverty. The hackney coaches are as neat, clean, and showy as private carriages; the horses are generally in excellent condition. The shops, though in such narrow streets, are as dashing as those of London or Paris; and most of them have signs, with paintings almost worthy of museums. The booksellers' and picture shops are numerous and large; and besides the literature of every state, in Germany, you may find many popular books and the principal engravings published in England and France." (*Austria and the Austrians*, i., 49, 50.)

*Parks, Amusements, &c.*—The principal amusements of the Viennese are music, dancing, the theatres, and frequenting the Prater and other fine promenades which encircle the city. The Prater, Hyde Park or Champs Elysées of this capital, is handsomer than either, and may in fact be considered the finest public park in Europe. It is nearly 4 m. in length by half as much in breadth; being enclosed between two arms of the Danube. Besides the fashionable drives, the Prater contains a great number of coffee and ice houses, pavilions, shows, &c., and is generally filled with a throng of people, particularly on Sundays and holidays. The glacié is studded in a similar manner with places of entertainment, and the Augarten and Brigittenau, both N. of the Danube, and the Volksgarten, within the city, are promenades in much the same style. The dancing saloons, or public ball rooms, are not in general what can be called fashionable places of amusement, though the imperial family and higher nobility attend the balls in the *Redoutensaal* at the carnival and other times. They are, however, resorted to by great numbers of the middle and also of the upper classes, and one of the principal, the *Apollon Saal*, can accommodate with ease 10,000 persons. The music here is of a superior order, the celebrated bands of Strauss and Lanner, and others little inferior, being constantly en-

gaged. Mr. Russell says, "The Viennese take to themselves the reputation of being the most musical public in Europe, and this is the only part of their character about which they display much jealousy or anxiety. So long as it is granted that they can produce among their citizens a greater number of decent performers on the violin or piano than any other capital, they have no earthly objection to have it said that they can likewise produce a greater number of blockheads and debauchees." (*Tour*, &c., ii., 271.) Nearly all the greatest modern composers, Mozart, Haydn, Beethoven, Gluck, &c., have composed their best works in or near Vienna.

*Morals, &c.*—Vienna has acquired the character of being the most dissolute capital in Europe. But without stopping to inquire whether it be entitled to this distinction, it is, at all events, a most agreeable place for a stranger. A liveliness and *bonhomie* pervades society; in bustle and activity Vienna rivals London and Paris; and the pursuit of pleasure appears one of the main occupations of the great mass of the inhabitants. The peace of the city is preserved with the utmost care. The arrivals, departures, residences, &c., of strangers are carefully noted; passports are strictly examined, and great care is taken that visitors shall show that they have the means of paying their way. With residents, however, the police interfere but little, and never obtrusively. Among the drawbacks on a residence here are, the furious driving in the crowded thoroughfares, through which pedestrians have to wind their way among heaps of fuel, the hewing of, which is incessantly carried on before the doors of the houses; the great variability of the climate, and the indifference of the water.

Vienna is an archbishop's see, the residence, of the Protestant superintendent for all the S.W. provinces of the empire, the seat of the high judicial tribunals, and central bureaux of the Austrian dominion, of the court of appeal for the archduchy of Austria, and the provincial government of the province below the Enns. Though not in general famous as a seat of literature, it has, among many other associations, a literary society: of which Von Hammer, the Orientalist, the poet Grillparzer, the historian Mailath, the novelist Caroline Pichler, the mineralogist Mohs, Balbi, &c., are members. Such is the influence of the censorship, that the city produces only two newspapers, and those worth little or nothing, with a few weekly scientific and fashionable papers, a monthly and a quarterly journal. The upper classes speak English, French, and Italian almost as well as their native language; and the *Times*, *Galignani's Messenger*, the *Edinburgh* and *Quarterly Reviews*, *Athenum*, and other British and foreign journals, may be had with but little difficulty.

The environs are picturesque, but the roads around are very bad. About 2 m. from the city is Schönbrunn, the favourite summer residence of the emperor. It stands in a large park, stocked with deer and game of all kinds. The palace, built by Maria Theresa, is a vast monotonous pile, but richly furnished, and possesses many interesting portraits of the Imperial family. It was twice occupied by Napoleon: the treaty of Schönbrunn was signed in it in 1809; and here the duke of Reichstadt, son of Napoleon, died in 1832. In the grounds are the *Gloriette*, a large columnar temple, from which a fine view is obtained; a menagerie, a splendid botanic conservatory and gardens, with eating-houses, music and dancing rooms, &c., for the public. Not far from Schönbrunn are Lacksenburg, Brühl, Baden, &c., frequented by pleasure parties from the metropolis, in much the same way as Richmond, Greenwich, or St. Cloud.

*History.*—Vindobona was remarkable in antiquity as the place where Marcus Aurelius expired. It was successively taken by the Goths and the Huns, and subsequently by Charlemagne, who placed it under the government of the margraves of the E. part of his dominion, thence called *Oester-reich*, and Austria. The margraves, afterwards dukes, held Vienna till the middle of the 13th century, soon after which it came into the possession of the house of Hapsburg. In 1484 it was taken by the Hungarians, whose king, Matthias, made it the seat of his court. Since the time of Maximilian I., it has been the usual residence of the archdukes of Austria, and emperors of Germany. It was besieged by the Turks in 1529 and 1683; on the first occasion it was relieved by Charles V., and on the second by John Sobieski of Poland, who totally defeated the enemy beneath its walls. In 1619 it was unsuccessfully blockaded by the Bohemian Protestants. In 1797, it was threatened by the French, but its siege was averted by the peace of Leoben. The French took it, however, in 1806 and 1809. The congress which parcelled out Europe into its modern subdivisions sat here from the 3d Nov. 1814, to the 9th June 1815. It suffered greatly from the cholera in 1831 and 1832. (*Pezzi's Beschreibung von Wien*; *Berghaus's Oesterr. Nat. Encyc.*; *Austria and the Austrians*, vol. i.; *Russell's Tour in Germany*, ii., 217-330; *Turnbull's Austria*, i.; *Spencer's Germ.*

## VIENNE.

and the Germans, ii., 124-190; *Strang's Germany* in 1831, ii., 325-353, &c.)

VIENNA, p. t. Oneida co. N. Y., 3 m. N. Utica, 120 m. W. by S. Albany, 358 W. Bounded S. by Oneida lake and Fish creek. It has seven stores, one fulling mill, one woolen factory, one grist-mill, 12 saw-mills; 22 schools, 822 scholars. Pop. 2530.

VIENNE, a dep. of France, reg. W., principally between the 46th and 47th degs. of N. lat., and long. 0° and 1° E., having N. Indre-et-Loire, E. Indre, S.E. Haute-Vienne, S. Charente, and W. Deux Sevres. Area, 676,000 hectares. Pop., in 1836, 282,731. It derives its name from the river Vienne, an. *Vigenna*, which rises in the dep. Creuse, and after traversing Haute-Vienne, a part of Charente, Vienne, and Indre-et-Loire, at first in a W., and afterward in a N. direction, enters the Loire after a lengthened course. Its principal affluents are the Thorizon, Issoire, and Creuse from the E., and the Briance, Vaire, and Clain from the S. and W. Limoges, Confolens, Chateaurault, Chinon, &c., are on its banks. Nearly all the other rivers of the department are tributaries of the Vienne or of its affluents. Surface, mostly level; but in the S., a chain of heights separates the basin of the Loire from that of the Charente. The soil in the level ground is moderately good, but in the S. it is thin and chalky. In 1834, the arable lands were estimated to comprise 413,131 hectares; pastures, 42,732 do.; vineyards, 28,744 do.; woods, 80,372 do.; and heaths, wastes, &c., 75,167 do. Wheat and oats are the grains principally cultivated: rye and millet are raised for home consumption; but in years of scarcity, chestnuts are a principal resource of the population. From 500,000 to 700,000 hectol. wine are annually produced; but, on the whole, its quality is inferior, and large quantities are converted into *eau-de-vie*, frequently of great excellence. The white wines are the most extensively produced; the red wines are generally *tres-colorés, dures, et âpres; ils se gardent long-temps, et s'améliorent en vieillissant: on en a vu qui conservaient encore leur qualité au bout de 40 ans.* (Julien, p. 150.) A good many cattle are reared, and the sheep in some of the cantons are said to be of a superior kind: the produce of wool is estimated at 400,000 kilogr. a year. About 45,000 hogs are said to be annually exported from this department, by way of the Atlantic ports. Bees and poultry are extensively reared. In 1835, of 120,518 properties, subject to the *contrib. foncière*, 72,589 were assessed at less than 5 francs, and 16,675 at from 5 to 10 francs: the number of those assessed at 1000 francs, or upward, was only 46. The vicinity of Chateaurault produces very superior lithographic stone; and marble, whetstone, millstone, &c., are found in other parts of the department. Some iron mines are wrought, and there are numerous iron forges. Chateaurault has rather extensive manufactures of fire-arms; and cutlery, lace, coarse woollen cloths and woollen yarn, paper, furs and skins, biscuits, beer, and vinegar are among the other goods made in Vienne. This department is divided into five arrondis.; chief towns, Poitiers, the cap., Chateaurault, Civray, Loudun, and Montmorillon. It sends five members to the chamber of deputies. Registered electors, in 1838-39, 1799. Total public revenue, in 1831, 6,012,262 francs. According to the *Dict. Géog.*, "L'instruction est arriérée dans ce pays. Le caractère dominant des habitants paraît être l'insouciance et l'inertie: ils sont invinciblement attachés aux usages, et aux préjugés de leurs pères." (Hugo, art. *Vienne*; *Dict. Géographique*, &c.)

VIENNE (an. *Vienna*), a town of France, dep. Isère, cap. arrond., on the Rhone, where it is joined by the Gere, the former being here crossed by a suspension bridge, 16 m. S. by E. Lyons. Pop., in 1836, 14,000, or, including its com., 16,484. "Vienne, situated under a high cliff, with the castle upon its summit, is a striking and beautiful object in descending the river; and after passing it, there is a perfect union of the beautiful and the picturesque in its scenery. It is here also, about 12 league after passing Vienne, that the vineyards lie so celebrated for their produce of *Cote-rotie*." (*Anglia's Switzerland*, &c., 179.) A handsome quay stretches along the Rhone; and the lower part of the town, on the high road between Lyons and Marseilles, has broad and well built streets; but the rest of the thoroughfares, along the narrow valley of the Gere, and up steep declivities, are ill laid out, and lined generally with mean houses.

Vienne has several remains of Roman buildings, and other antiquities. In the centre of the town is a temple, anciently dedicated to Augustus and Livia, having a good deal of resemblance to the *Maison carrée* at Nismes, though not in such good preservation. It has been used for a church, a club-house, and a tribunal of commerce, and is now appropriated to a museum of antiquities. Outside the town, and in much better preservation, is a pyramidal monument nearly 45 feet in height, and apparently a tomb. The traces of a bridge across the Rhone, an amphitheatre, a naumachia, theatre, &c., also exist. Here, also, are several middle-age antiquities, among which is the cathedral,

1026

## VIGEVANO.

considered one of the best Gothic edifices in France. It stands in an elevated position; its grand entrance is ornamented with sculptures, and flanked by two high towers; the roof is supported by 48 lofty columns in the interior; the galleries have Gothic balustrades; and it has a fine monument of one of the archbishops of Vienne. The church of an ancient abbey is also worth notice. The other principal buildings are the cavalry barracks, college, hospital, work-house, corn exchange, abattoir, and public library with 14,000 volumes.

Vienne has manufactures of woollen cloths, pasteboard, iron and copper plates, &c.; and near it are some argentiferous lead mines producing about 1500 quintals a year of metal. It was anciently a city of consequence, having been successively the capital of the Allobroges; of its province in Narbonnese Gaul, under the Romans; and of the first and second kingdoms of Burgundy; and in the early ages of Christianity, it was the see of the archbishop, primate of Gaul. It was united with Dauphiny to the French dominion by Louis XI. The famous council, held in 1311, which abolished the order of the Templars, met in this town. (Hugo, art. *Isère*; *Dict. Géog.*, &c.)

VIENNE (HAUTE), a dep. of France, reg. W., between lat. 45° 25' and 46° 25' N., and long. 0° 35' and 1° 45' E., having N.W. and N. Vienne and Indre; E. Creuse; S.E. Corrèze; S.W. Dordogne; and W. Charente. Area, 554,266 hectares. Pop., in 1836, 285,130. The surface is hilly, particularly in the E., and the mean elevation of the dep. is estimated at between 1800 and 1900 feet above the level of the sea. The rivers, the principal of which are the Vienne (see previous art) and the Gartempe, with their tributaries, have generally a W. direction. The soil, being mostly composed of the debris of granite, and other primary rocks, is, in general, of inferior fertility. In 1834, the arable lands were estimated to comprise 213,354 hectares; pastures, 121,899 do.; woods, 38,858 do.; and heaths, wastes, &c., 93,244 do. Wheat is but little grown; its place being supplied by rye, buckwheat, chestnuts, and potatoes. Very little wine is grown. The pasture lands are comparatively good; and, in 1830, the sheep in the department were estimated at nearly 610,000 head, and the cattle at 148,000 do. The wool produced in the department is, however, of inferior quality. Rural industry of all kinds is very backward. In 1835, of 59,733 properties, subject to the *contrib. foncière*, 25,483 were assessed at less than 5 francs and only 18 at 1000 francs, and upward. The fine potter's clay at St. Yriex is, perhaps, the most valuable of the mineral products; there is a tin mine at Vantry, the only place in France at which that metal is found; and copper, iron, lead, antimony, manganese, coal, &c., are met with in greater or less abundance. The manufacture of earthenware is the most important; and among its other products are iron and copper plates, cutlery, and other steel articles, nails, linens, woollen and cotton yarn, coarse woollen cloths, paper, leather hats, wooden shoes, &c. It is estimated, that 15,000 inhabitants of this department migrate annually as masons, sawyers, carpenters, &c., into the departments of Seine and Rhone, and the arsenals on the W. coast. Haute Vienne is divided into four arrondis.; chief towns, Limoges, the cap., Bellac, Rochechouart, and St. Yriex. It sends five members to the chamber of deputies. Registered electors, in 1838-39, 1666. Total public revenue, in 1831, 5,103,607 francs. (Hugo, art. *Vienne* and *Haute Vienne*; *French Official Tables*, &c.)

VIERZON-VILLE, a town of France, dep. Cher, cap. cant., on the Evre, near its junction with the Cher, in a fertile plain, 19 m. N.W. Bourges. Pop., in 1836, 4980. It consists principally of one street, which would be among the best in France, if furnished with footways. (*Guide du Voyageur*, &c.) Its houses are mostly slated. It has manufactures of woollen cloths, earthenware, and iron ware. Its castle was destroyed by Richard I. of England in 1192; and in 1356, it was pillaged by the army of the Black Prince. (*Dict. Géog.*; Hugo; &c.)

VIGAN (L'E), a town of France, dep. Gard, cap. arrond., on the Arre, a tributary of the Herault, 40 m. W.N.W. Nismes. Pop., in 1836, 4686. The *Dict. Géog.* says that it is old and ill built; but according to the *Guide du Voyageur*, it is the pleasantest and most healthy of all the small towns in the Cévennes, and one to which the opulent inhabitants of Nismes and Montpellier resort during the heats of summer. In one of its squares has been erected a fine bronze statue of the Chevalier d'Assas, a native of the town. It has manufactures of cotton and silk hosiery, cotton yarn, leather, and paper.

VIGEVANO, a town of N. Italy, dom. of Sardinia, div. Novara, prov. Lomellina, cap. mand., on the Mora, near the Ticino, and 14 m. S.S.E. Novara. Pop., in 1838, 15,221. Its site is elevated, and it enjoys a salubrious climate. It is enclosed by walls, has an old castle, a cathedral, which stands in a square surrounded on three sides by arcades, one of the best cavalry barracks in Piedmont, numerous

## VIGO.

convents, a hospital, government pawn-bank, a communal college, and a *sanatorium*, established in 1832. Near it is a large and handsome Dominican convent. The town has manufactures of silk stuffs, hats, soap, macaroni, &c.; two annual fairs of eight days each, and markets twice a week. This town gave birth to Francis Sforza II., duke of Milan, and is much indebted to the munificence of the Sforza family. Under the French it was the capital of an arrond., in the department of Agogna. (*Rampoldi, &c.*)

VIGO, co., Ia. Situated in the W. toward the S. part of the state, and contains 400 sq. m. Watered by Wabash river and its tributaries. It contained in 1840, 12,086 neat cattle, 854 sheep, 31,730 swine; and produced 17,654 bushels of wheat, 718,485 of Indian corn, 2268 of buckwheat, 104,683 of oats, 33,706 of potatoes, 10,117 pounds of sugar. It had five commission houses in foreign trade, 54 retail stores, one furnace, two flouring-mills, nine grist-mills, 18 saw-mills, one oil-mill, four tanneries, four distilleries, one brewery, two printing-offices, two weekly newspapers; 29 schools, 1307 scholars. Pop. 12,076. Capital, Terra Haute.

VILLANOVA, p. t., Chautauque co., N. Y., 25 N.E. Mayville, 323 W. by S. Albany, 346 W. Drained by Coneyango creek and its tributaries. It has two stores, two fulling-mills, two grist-mills, six saw-mills; 13 schools, 583 scholars. Pop. 1655.

VILLA-REAL, a town of Spain, in Valencia; prov. Castellon de la Plana, on the Mijares, here crossed by a fine bridge of 13 arches, within about 4 m. of the sea, and 33 m. N.N.E. Valencia. Pop., according to Miñano, about 8000. It originated in a country palace of James I., king of Aragon. It has one regular and well-built street; several religious edifices, a prison, a large suburb, and some silk and woollen manufactures, distilleries, &c. It was formerly fortified, and in the war of the succession was garrisoned for the archduke Charles; but, having been taken by the troops of Philip V., in 1706, its defensive works and most of its buildings were destroyed, and great part of its inhabitants put to the sword.

The town of the same name in Portugal, prov. Tras-os-Montes, cap. Comarca, is said by Miñano to have 4100 inhabitants. (*Dict. d'Esp., &c.; Mod. Trav.*)

VILLA-RICA, a town of Brazil, cap. of the prov. Minas-Geraes, on the Ouro-preto, by which it is intersected, and which is here crossed by four stone bridges, 190 m. N.N.W. Rio Janeiro; lat. 20° 25' 30" S., long. 43° 19' 33" W. Pop. uncertain, fluctuating with the state of the mines; in the early part of the present century it was estimated at 20,000, principally whites, but is now, probably, a good deal less. It occupies an elevated site, but it has no very striking approach; nor, on a nearer view, does it present to the eye of a traveller any object corresponding with the grandeur of its name. It is situated on the declivity of a high mountain, forming part of an immense chain. Most of the streets range in parallel rows along the side of the mountain, being crossed by others leading up the acclivity. These have numerous public fountains, and the town generally is admirably supplied with water, which is conveniently conducted into almost every house. (*Mace's Brazil*, p. 238, &c.) The streets are ill-paved; but there are many good houses two stories in height, built of stone, tiled, and whitewashed. The governor's residence, the town-hall, two parish churches, numerous chapels, the mint, college, and theatre, were, a few years ago, the principal edifices. Some of these are superior to the public buildings in most other parts of Brazil. The governor's house commands a view of nearly the whole town; and in its front is an open space surrounded by a sort of parapet, on which a few brass swivels are mounted. Several of the churches, &c., are richly ornamented. The mint is in the lower part of the town, attached to the treasury and custom-house. The climate of Villa Rica, owing to its elevated situation, is very agreeable; the usual range of the thermometer is from 64° to 80° Fah. in summer, and from 48° to 70° in winter. Thunder-storms, though common, are not violent. The gardens here, which extend in raised terraces along the side of the mountain, produce excellent kitchen vegetables; but beyond these, the vicinity of the town, notwithstanding its fertility, is wholly uncultivated, and the cattle and other stock are allowed to pasture at random. The markets are accordingly ill supplied; and when Muve visited the country, most sorts of provisions and vegetables brought a very high price. The inhabitants, in fact, are chiefly interested in mining speculations; Villa Rica being, or, at all events, having been, the headquarters of the gold-mining district of Brazil. The metal, found in the mountain on which the town is built, is imbedded in a matrix of slaty clay schist resting on granite, gneiss, or sandstone. Bars of this valuable product, with precious stones, cotton, hides, marmalade, cheese, &c., are sent to Rio, where they are exchanged for slaves, manufactured goods, wines, hams, &c. Owing, however, to the falling off in the productiveness of the mines, this trade is now

## VINCENNES.

much less considerable than formerly. The goldsmith trade is prohibited in Villa Rica; but almost all other handicrafts are carried on. There are also manufactures of gunpowder, hats, pottery, &c. The inhabitants generally depend on mining; and in consequence of the uncertain, hazardous nature of their employment, which has greatly declined, they are very generally idle, poor, and dissolute. (*Mod. Trav.* xxix.; *Mace's Brazil*; *Dict. Geog. &c.*)

VILLEFRANCHE, a town of France, dép. Aveyron, cap. arrond., on the Aveyron, 26 m. W. Rhodéz. Pop. in 1836, ex. com., 8147. It is well built; four parallel thoroughfares divide the town into nine parts, besides which it has several suburbs interspersed with plantations. The old collegiate church, and the hospital, formerly a conventual building, are remarkable specimens of Gothic architecture. The public establishments comprise a college, a public library, museum, and club; or subscription rooms. The principal manufactures consist of linens and copper wares; it has, also, a considerable trade in corn, cattle, and other rural produce, and 12 annual fairs.

Another town of the same name is the cap. of an arrond. in the dep. of the Rhone, on the Saone, 17 m. N.N.W. Lyons. Pop. in 1836, 7553. It consists chiefly of one very long and wide street, is well built, and has agreeable environs. Its manufactures consist principally of linen fabrics, cotton, thread, and leather, in which articles, with the addition of wine, cattle, hemp, flax, hempen cloths, &c., it has a brisk trade with other towns in the S. of France. Near it are some lead-mines, which were wrought under the Romans. (*Hugo, &c.*)

VILLENA (an. *Turibula* or *Arbacula*), a town of Spain, prov. Murcia, cap. distr., in a fine plain, 32 m. N.W. Alicante. Pop. about 10,000. Inglis says, "It has its rock, castle, and huerta, and is a place of some size, with several convents and churches. The vine is extensively grown upon the lower acclivities of the neighbouring sierra, and is almost all converted into brandy. The pop. of this town appeared to me to present a singularly disreputable appearance; beggarly, idle, ragged, and ruffian-like." (*Spain* in 1830, ii. 239.) Villena gives title to a marquis, whose palace, a town-hall, two churches, many chapels and convents, a hospital, and some barracks are its principal edifices. It has some soap factories; and in the neighbouring marshes a good deal of salt is made. (*Miñano, &c.*)

VINALHAVEN, p. t., Waldo co., Me., 12 m. S.E. Camden. It consists of Fox islands at the mouth of Penobscot bay, of which there are three large, and several small ones. They contain good harbours, well situated for navigation, and especially for the fisheries. It has seven stores, two grist-mills, two saw-mills; 13 schools, 766 scholars. Pop. 1950.

VINCENNES, a town of France, dép. Seine, cap. cant. on the road to Coulommiers, within a short distance of Paris. Pop. in 1836, 2825. Vincennes owes its origin to Philip Augustus, who surrounded the wood of its name with walls, and built at one of its extremities a royal residence, on the site of which, in 1339, the present castle was erected. This castle continued to be a place of resort for the French kings till the time of Louis XI., when it was made a state prison, a destination which it retained, with little intermission, till 1784; the great Condé, Diderot, and Mirabeau, having been among the number of those confined within its walls. Under Napoleon it again served the same purpose, and here, on the 21st of March, 1804, the Duke d'Enghien was shot. The castle of Vincennes is of an oblong form, about 360 yards in length by 210 in breadth, surrounded by dry ditches, and entered by two drawbridges. The keep is a square tower, five stories in height, with four turrets, and a balcony outside the fourth story. The chapel, founded by Charles V., in 1379, but mostly rebuilt under his successors, is a rich Gothic edifice, with some fine stained glass. The *cour royale* is surrounded by modern buildings, in which are some well furnished apartments, and a large collection of arms. In the fosse, a plain column of red granite, on a foot of black marble, and bearing the inscription, "*Hic cecidit*," points out the spot where the Duke d'Enghien met his fate. The wood of Vincennes, comprising about 1500 acres, is, with the town, a good deal resorted to by the Parisians on holidays, particularly the *fête patronale*, on the 15th of August. (*Guide du Voyageur en France: Hugo; &c.*)

VINCENNES, p. v., capital of Knox co., Ia., 118 m. S.W. Indianapolis, 688 W. Situated on the E. bank of Wabash river, 100 m. above its entrance into Ohio river. It has a fertile prairie of several thousand acres on the north, east and south. It is the oldest town in the state, having been established as a trading port by the French in 1730. It contains a brick-courthouse, a jail, a county seminary, St. Clare's female school, conducted by the sisters of charity, three churches of brick, 22 stores, three steam-mills, one windmill, two cotton factories, two printing-offices, two weekly newspapers, a public library of over 1500 vols., 350 dwellings, and 2000 inhabitants, one fifth of whom are

# VINCENT (ST.)

French. The river is navigable to this place for steam-boats, excepting at very low water.

VINCENT (ST.), one of the W. India islands, belonging to Great Britain, in the centre of the Windward group, about lat. 13° 10' N., and long. 60° 37' W., 21 m. S.S.W. St. Lucia, and 108 m. W. Barbadoes. It is of an elliptical shape, 17 m. in length, and from 7 to 8 m. in mean breadth. Area, about 85,000 acres. Pop., by last-census, 26,533; of whom 22,997 were blacks. The centre of the island is occupied by a lofty range of mountains, which in some parts attain the height of 4000 ft.; but the mountains decline rapidly towards the sea; and there are some considerable and well-watered valleys, the soil of which, consisting of a fine black mould of sand and clay, is especially adapted for the culture of sugar. In the upper grounds the soil is light and sandy. St. Vincent is of volcanic origin, and a tremendous eruption of one of its mountains in 1812, occasioned great mischief. The mountains are clothed from their base to their summits with immense forest trees; but the ground having every where the advantage of a gradual slope, and there being little jungle or brush-wood, ventilation is not impeded. The valleys also are sufficiently wide, and free from excessive vegetation, to give a healthy character even to the uncultivated portion of the island; and there is little swampy ground, except in a few places near the sea. Only about one third part of its surface is under cultivation. The atmosphere is generally humid, and the dews heavy; but notwithstanding, St. Vincent is justly considered one of the most healthy of the W. India islands. (*Tulloch's Rep.*) We subjoin

AN ACCOUNT of the Principal Articles of Produce imported into the United Kingdom from St. Vincent during each of the Three Years ending with 1841.

Articles.	1839.	1840.	1841.
Sugar . . . cwts.	151,899	101,020	110,205
Molasses . . . cwts.	34,951	16,529	31,587
Rum . . . galls.	189,697	145,909	88,989
Coffee . . . lbs.	33	699	
Cocoa . . . lbs.	760	6,422	1,758

The government is vested in a governor, a council of 12, and an assembly of 19 members. Representatives of the house of assembly must have an income of £300 a year, or, if representing the town of Kingston, a house in that town of the yearly value of £100. Electors must possess a freehold of 10 acres, worth £20 a year in Kingston, or £10 a year elsewhere. St. Vincent, with its dependency, the Grenadines, is divided into six parishes. Kingston, the capital at the bottom of a bay, near the S.W. extremity of the island, with an amphitheatre of wooded hills in its rear. The troops, amounting to nearly 900 men, are principally quartered at fort Charlotte, on a very steep hill, about 1½ m. N.W. the town, and 600 ft. above the level of the sea.

St. Vincent was discovered by Columbus, but was inhabited only by Caribs till the latter part of the 17th century, when a slave ship from Guinea having run ashore on the island the blacks mostly escaped, and settling here, became in the sequel the most formidable enemies of the Caribs. It subsequently fell into the hands of the French, who ceded it to the English in 1763. In 1779, it was re-captured by the French; but it reverted, in 1783, to Great Britain. The sum awarded, in 1835, for the manumission of the slaves in St. Vincent amounted to £502,500. (*Edward's West Indies*; *Tulloch's Rep. on the Health of the Troops in the W. Indies*; *Parl. Papers*, &c.)

VINCENT (CAPE ST.), the *Sacrum Promontorium* of the ancients, a promontory forming the S.W. extremity of Portugal, prov. Algarve, 110 m. S. Lisbon, lat. 37° 2' 54" N., long. 8° 59' 36" W. This cape is celebrated in naval history for the great victory gained in its vicinity on the 14th of February, 1797, by the British fleet, under Sir John Jervis, over a Spanish fleet. The British fleet comprised only 15, whereas that of the Spaniards amounted to 27 sail of the line. But notwithstanding this disparity, the latter were completely defeated, with the loss of two ships of 112, one of 24, and one of 74 guns. The victorious admiral, in acknowledgment of his gallantry and success, was elevated to the peerage by the title of Earl St. Vincent.

VINEYARD, p. t., Grand Isle co., Vt., 78 m. N.W. Montpelier, 551 W. It consists of Isle La Motte or Vineyard in Lake Champlain, containing 4620 acres. Pop. 435.

VIRE, a town of France, dep. Calvados, cap. arrond. near the source of the river of its own name, 35 m. S.W. Caen. Pop. in 1836, ex. comm., 7200. It is well-built, principally on the declivity of a hill, on the summit of which is the Foundling Asylum, and at the base the general hospital; on the ascent, among other buildings, are the courthouse, sub-prefecture, town-hall, and new prison, with a handsome square. In the middle ages, Vire had a castle, of which some remains still exist; but the greater part of its site is occupied by the town-hall and a planted promenade. The

# VIRGINIA.

principal church is a fine Gothic building. A great deal of activity prevails in Vire, which has manufactures of coarse and fine woollens, woollen yarn, paper of all kinds, needles, and other steel articles, horn articles, &c., with tanneries and fulling-mills. It has tribunals of primary jurisdiction, and commerce, a chamber of manufactures, council of *prud'-hommes*, communal college, and public library. Duhamel, and some other eminent personages, were natives of Vire. (*Hugo, art. Calvados*; *Dict. Encyc.*)

VIRGIL, p. t., Cortland co., N. Y., 149 m. W. by S. Albany, 308 W. Drained by Toughnioga river, and East Oswego creek. It contains three churches, a Presbyterian, Methodist and Baptist, three stores, one forge, one fulling-mill, two grist-mills, 13 saw-mills, two tanneries; 35 schools, 1515 scholars. Pop. 4502.

VIRGINIA, the northernmost of the southern United States is between 36° 33' and 40° 43' N. lat., and between 75° 25' and 83° 40' W. long., and between 1° 35' E. and 6° 39' W. long. from W. It is 370 m. long, and 200 broad at its greatest width, containing 64,000 sq. m., or 40,960,000 acres. It is bounded N. by Pennsylvania and Maryland, from which latter it is separated by Potomac river; E. by the Atlantic; S. by North Carolina and Tennessee; and W. by Kentucky; N.W. by Ohio. The population in 1790, was 747,610; in 1800, 686,149; in 1810, 974,622; in 1820, 1,065,366; in 1830, 1,211,272; in 1840, 1,239,797, of whom 448,987 were slaves. Of the free population, 371,223 were white males; 369,745 were white females; 23,814 were coloured males; 26,020 were coloured females. Employed in agriculture, 318,771; in commerce, 6361; in manufactures and trades, 54,147; in navigating the ocean, 582; do. canals and rivers, &c., 2952; in the learned professions, 3966.

The state is divided into 119 counties, which with their population in 1840, were as follows:

Counties.	Total Pop.	Counties.	Total Pop.
<i>Eastern District.</i>		<i>Western District.</i>	
Accomac . . .	17,096	Surry . . .	6,480
Albemarle . . .	22,924	Sussex . . .	11,229

Richmond, on James river, at the head of tide water, and just below the lower falls, is the capital.

The state has a great variety of surface and of soil. From the sea coast to the termination of tide water, which in-

## VIRGINIA.

cludes a tract from 110 to 120 m. in width, the country is low and flat, in some places marshy, the soil is sandy, covered with pitch pine, with a light soil of little fertility, except on the margins of the rivers, where it is often productive. This is denominated the low country, and is unhealthy from August to October. Between the head of tide water to the Blue ridge, the country gradually rises and becomes uneven, and near the mountains, often abrupt and broken, though the soil is frequently fertile. The first ridge of mountains in this state, is generally about 150 m. from the ocean, beyond which the country is mountainous, traversed by various ridges of the Alleghany, which occupy a greater breadth of country in Virginia than in any other state. Between these ridges are extensive valleys of table land, composed of mould resting on a bed of limestone, and it often possesses great fertility, and is some of the most pleasant land in the state: The farms are here smaller than in the eastern parts of the state, better cultivated, and there are fewer slaves. The country beyond the Alleghany mountains is generally wild and broken, in some places fertile, but generally barren. Indian corn, wheat and tobacco are the staple productions of the state; cotton is raised for home consumption. But the agricultural statistics for 1840 will exhibit most correctly the productions of the state. There were 326,438 horses and mules; 1,024,148 neat cattle, 1,293,772 sheep, 1,992,155 swine; poultry was raised to the value of \$754,688. There were produced 10,109,716 bushels of wheat, 1,482,799 of rye, 87,430 of barley, 243,822 of buckwheat, 34,577,591 of Indian corn, 13,451,062 of oats, 2,944,660 of potatoes, 2,538,374 pounds of wool, 75,347,106 of tobacco, 2856 of rice, 3,494,483 of cotton, 1,541,833 of sugar, 10,597 of hops, 65,020 of wax, 3191 of silk cocoons, 364,708 tons of hay, 25,594 of hemp and flax. The products of the dairy were valued at \$1,480,488, of the orchard at \$705,765, of lumber at \$538,092; and 13,911 gallons of wine were made.

The mineral wealth of Virginia is very great. Gold, copper, lead, iron, coal, salt, limestone, and marble are found; and it has a number of very celebrated mineral springs, particularly those impregnated with sulphur. Mining has recently received much attention; and in 1840, 2000 persons were engaged in it. The belt of country in which gold is found is in Spottsylvania county and the adjacent country, and extending in a S.W. direction, it passes into North Carolina, South Carolina, Georgia and Alabama. But the iron and coal are much more valuable. The coal fields are very extensive, both anthracite and bituminous, and large quantities have been exported, particularly from the neighbourhood of Richmond. Salt springs are found, and large quantities of salt are exported from the banks of the Great Kanawha.

The Natural bridge in Rockbridge county (see NATURAL BRIDGE), and Weyer's cave in Augusta county, are great curiosities.

James river is the largest in the state, being 500 m. long, flowing from the region between the Blue ridge. It is navigable for sloops of 125 tons 120 m. to Richmond, and for boats much above that, and it enters Chesapeake bay. Appomattox is 130 m. long, enters James river 100 m. above Hampton roads, and is navigable 12 m. to Petersburg. The Rappahannock rises in the Blue ridge, and flowing 130 m., it enters Chesapeake bay. It is navigable 110 m. for sloops. York river enters Chesapeake bay, 40 m. below the Rappahannock, and is navigable 40 m. for ships. Potomac river separates the state from Maryland, and just before its passage through the Blue ridge at Harper's ferry, it is joined by the Shenandoah from the S. The Potomac is navigable for ships of the line to Washington, and enters Chesapeake bay by a broad estuary. Great and little Kanawha are principal rivers west of the mountains, and enter Ohio river. The Monongahela rises in this state, though it runs principally in Pennsylvania. Staunton and Dan rivers in the S. part of the state, unite to form Roanoke river, flowing into North Carolina.

The lower part of Chesapeake bay lies wholly in this state, is 15 m. wide at its mouth, and enters the Atlantic between cape Charles and cape Henry.

Norfolk, 8 m. from Hampton roads, near the mouth of James river, has much the best harbour in the state; spacious, safe, and well-defended, with a sufficient depth of water for the largest ships. It is the most commercial place in the state; but Richmond and Petersburg are more populous, and better situated for trade with the interior. Lynchburg, Fredericksburg, Winchester and Wheeling are also principal places.

The exports of the state for the year ending Sept. 30th, 1841, were \$5,630,286, and the imports were \$937,357. The tonnage entered was 34,275, and the tonnage cleared was 63,243. There were in the state in 1840, 31 commercial and 64 commission houses in foreign trade, with a capital of \$1,299,500; 2736 retail stores, with a capital of \$16,684,413; 1454 persons employed in the lumber trade, with a capital of \$113,210; 931 persons engaged in internal transportation,

who with 103 butchers, packers, &c., employed a capital of \$100,680; 556 persons engaged in the fisheries, with a capital of \$28,383.

The manufactures of Virginia are not so extensive as those of many states inferior to it in territory and population. Domestic or family manufactures amounted in 1840, to \$2,441,672; 47 fulling-mills and 41 woollen manufactories, employed 222 persons, produced articles to the amount of \$147,792, with a capital of \$112,350; 22 cotton manufactories with 42,262 spindles, employed 1816 persons, producing articles to the amount of \$446,063, with a capital of \$1,299,090; 42 furnaces produced 18,810 tons of cast iron, and 52 forges produced 5886 tons of bar iron, the whole employing 1742 persons, and a capital of \$1,246,650; 11 smelting houses employed 131 persons, and produced gold to the amount of \$51,758, with a capital of \$103,650; 5 smelting houses employed 73 persons, and produced 878,648 pounds of lead, with a capital of \$21,500; 12 paper-mills produced articles to the amount of \$216,245, and other manufactories of paper produced \$1260, the whole employing 181 persons, and a capital of \$287,750; 3342 persons manufactured tobacco to the amount of \$2,406,671, employing a capital of \$1,526,080; hats and caps were manufactured to the amount of \$155,778, and straw bonnets to the amount of \$14,700, the whole employing 340 persons, and a capital of \$85,640; 660 tanneries employed 1422 persons, and a capital of \$538,141; 982 other manufactories of leather, as saddleries, &c., produced articles to the amount of \$826,597, and employed a capital of \$341,957; four glass-houses, and two glass cutting works, employed 164 persons, producing articles to the amount of \$146,500, with a capital of \$132,000; 33 potteries employed 64 persons, producing articles to the amount of \$31,380, with a capital of \$10,225; 36 persons produced drugs, paints, &c., to the amount of \$66,633, with a capital of \$61,727; 445 persons produced machinery to the amount of \$429,858; 150 persons produced hardware and cutlery to the amount of \$50,504; 202 persons manufactured 9330 small arms; 40 persons manufactured granite and marble to the amount of \$16,652; 1004 persons produced bricks and lime to the amount of \$393,253; 1592 persons manufactured carriages and wagons to the amount of \$647,815, with a capital of \$311,625; 1454 distilleries produced 865,725 gallons of distilled spirits, and five breweries produced 32,960 gallons of beer, the whole employing 1631 persons, and a capital of \$187,212; 764 flouring-mills produced 1,041,526 barrels of flour, and with other mills employed 3964 persons, producing articles to the amount of \$7,855,499, with a capital of \$5,184,669; vessels were built to the amount of \$136,807; 675 persons manufactured furniture to the amount of \$299,391; there were 402 brick or stone houses, and 2604 wooden houses erected, employing 4694 persons, and cost \$1,367,393; 50 printing-offices, 13 binderies, four daily, 12 semi-weekly, and 35 weekly newspapers, and five periodicals, employed 310 persons, and a capital of \$168,850. The total amount of capital employed in manufactures in the state was \$11,360,861.

William and Mary college at Williamsburg, is the oldest in the state, and one of the oldest in the country, and was founded in 1691; Hampden Sydney college, in Prince Edward county, was founded in 1783, and is flourishing; Washington college, at Lexington, was founded in 1812; Randolph-Macon college, at Boylston, was founded in 1832. There are theological schools at Richmond, in Prince Edward county, and in Fairfax county. But the most important literary institution in the state, is the university of Virginia, at Charlottesville, founded in 1819. Its plan is extensive, its endowment has been munificent, and it is a prosperous institution. Mr. Jefferson valued himself on having exerted his influence to found this institution, and left an inscription for his monument, since inscribed on it, written by himself; "Thomas Jefferson, author of the declaration of independence, and founder of the university of Virginia." In the above colleges, and a few others, there were in 1840, 1087 students; there were in the state 362 academies, with 11,083 students; and 1561 common and primary schools, with 35,331 scholars. There were in the state 58,787 white persons over 20 years of age who could neither read nor write.

The Baptists, the most numerous religious denomination, had in 1836, 435 churches, 261 ministers, and 54,302 communicants; the Methodists had 168 ministers and 41,703 communicants; the Presbyterians had 117 churches, 90 ministers, and 11,413 communicants; the Episcopalians had one bishop, one assistant bishop, 65 ministers, and about 3000 communicants; the Lutherans had 24 congregations and seven ministers; the Reformed Baptists (Campbellites) had about 10,000 communicants; the Roman Catholics had 10 congregations and five ministers; the Unitarians had one minister; and there were some Friends, and a few Tunkers and Jews.

In January 1841, there were in the state six banks and 21 branches, with an aggregate capital of \$10,283,633, and a

## VIRGINIA

circulation of \$6,852,485. The state debt amounted to \$7,650,000. The property of the state, invested in bank and other stocks, was \$12,500,000.\*

There is a state penitentiary located at Richmond.

Virginia has undertaken several important works of internal improvement, by chartering private companies, which have been aided liberally by the state. The Dismal Swamp canal connects Chesapeake bay with Albemarle sound, extending from Deep creek, a tributary of the former, to Joice's creek, a branch of Pasquotank river of Albemarle sound, 23 m. long, and cost \$879,864. It has branches of 11 m. A canal extends along James river, from Richmond to Lynchburg; and this communication is designed to be extended by canal and railroad to the Ohio river by the great Kanawha. No other spot between New-York and Georgia presents an equally favourable country for a line of communication across the Alleghany mountains. The whole length would be 425 m. A railroad extends from the Potomac river, at the mouth of Aquia creek to Fredericksburg, and thence to Richmond, in the whole 75 m., and cost \$1,370,000. It proceeds from Richmond S. to Petersburg 23 m., which cost \$750,000; and from Petersburg to Veldon on Roanoke river, 59 m., which cost \$900,000, where it unites with other southern railroads. A railroad extends from Petersburg to City point, 12 m. A railroad extends from Winchester 32 m. to Harper's Ferry, where it unites with the Baltimore and Ohio railroad. Greensville railroad connects the Petersburg and Roanoke railroad with the Raleigh and Gaston railroad, N. C., extending from Hicksford 18 m. to Gaston, and cost \$250,000. The Chesterfield railroad, 13½ m. long, extends from the Chesterfield coal basin to tide water in James river, at Manchester, opposite Richmond. Other railroads have been projected.

The first constitution of Virginia was formed in 1776. This was amended by a convention assembled for that purpose, in 1830. The governor is elected for three years by the joint vote of the two houses of assembly, but is ineligible for the next succeeding three years. He must be at least 30 years of age, must be a native born citizen of the United States, and have resided in the state for five years next preceding his election. The council of state consists of three members, elected for three years, one of the number retiring annually. They are the advisers of the governor. The senior councillor is lieutenant governor, and acts as governor in case of the death, resignation, absence, or inability of the governor. The senate consists of 32 members, elected by the people for four years, one fourth of the number retiring annually. A member must be at least 30 years of age, and have a residence and a freehold in the district for which he is elected. The house of delegates consists of 134 members, elected annually by the people. A member must be at least 25 years of age, and have a residence and a freehold in the district for which he is elected. No person holding a lucrative office, no ministers of the gospel, or priests of any denomination, can be elected a member of the assembly. The judges of the supreme court of appeals, and the superior courts, are elected by the joint vote of both houses of assembly, and hold their offices during good behaviour. The attorney-general is appointed in the same manner, and holds his office during the pleasure of the general assembly. Every white male citizen of the state, of 21 years of age or upwards, who owns an interest, in a freehold estate of the value of \$25, or who is a house-keeper or head of a family, and has paid taxes, excepting paupers, non-commissioned officers, soldiers, seamen or marines in the service of the United States, and persons convicted of infamous crimes, is entitled to the right of suffrage. The general assembly meet annually at Richmond on the first Monday of December. At all elections, votes are given openly, or *visa voce*, and not by ballot, as in most of the other states.

Virginia has obtained the name of the ancient dominion, having been settled in April, 1607, at Jamestown on James river, and was the first white settlement in the United States, being over four years older than the settlement at Plymouth. It was named in honour of queen Elizabeth by Sir Walter Raleigh, to whom she granted the country; but the settlement of it which he attempted failed. The grant was vacated by the execution and attainder of that nobleman, under James I. The territory was then granted to two companies, the London company and the Plymouth company, and called North and South Virginia. By the former the country was settled, and Jamestown was named in honour of their royal patron. The first settlers were a different set of men from the settlers at Plymouth, and the country suffered many disasters from the contentions among the leaders, the turbulence of the citizens, the wars with the Indians, and the tyranny of the royal governors. Virginia was a very loyal province, and was attached to the royal party during the protectorate of Cromwell; and was among the first to proclaim Charles II. at the restoration. The church of England was established by law in 1662.

## VITERBO.

Virginia had the high honour in 1732, of being the birth-place of George Washington, and it was as an officer of her colonial militia, when a very young man, during the French war, that he commenced his career of military glory. This state was among the first to resist the aggressions of the mother country, and her sages and yeomen bore a distinguished part in the Revolutionary struggle. Her Patrick Henry as a Revolutionary orator, her Washington as the greatest and the best in the field and in the cabinet, and her Jefferson, Madison, and Monroe, as presidents of the United States, and her Marshall, as chief justice, have conferred distinguished honour on their country; and given her a high place in the American confederacy. In convention, June 25th; 1788, the constitution of the United States was adopted,—years 89, says 79; majority 10. It will be found that the constitution was adopted with the greatest struggle and the most powerful opposition, where the spirit of liberty was the most active and jealous. If after its excellency has been fully tested, conventions could now be called in the several states, to pass upon it, it would be adopted, probably, without a dissenting voice. Its excellency is becoming daily more apparent, and its authority more commanding and undisputed.

VISTULA (Germ. *Weichsel*), one of the great rivers of central Europe, flowing from S. to N. through Poland. The basin of the Vistula is situated between those of the Elbe to the W., the Niemen and Dniester to the N.E. and N., and the Dnieper to the S.E. It rises in Moravia, in a branch of the Carpathians, close on the frontier of Galicia, and about 20 m. S.E. Teschen; and at a short distance from its source is precipitated over a fall 180 feet in height. It proceeds at first N. for about 40 m., and then turns to the E., separating Silesia, the territory of Cracow, and the kingdom of Poland on the N., from Galicia on the S. Shortly after passing Sandomir, it again flows northward, which course it retains through the centre of Poland to beyond Warsaw. It now turns W.N.W., and pursues generally the same direction to the influx of the Braa, 20 m. from Thorn; after which its course varies little from N.N.E. to its mouth in the Baltic. Its entire length is estimated at 550 m. It receives a vast number of tributaries, the principal of which are the Nida, Kamienna, Pilica, and Braa, from the W.; and the San, Wieprz, and Bug, with its tributaries, from the E. At Cracow it is only about 150 feet in width; at Warsaw it is crossed by a bridge of boats 1600 feet in length. After receiving the Bug, a stream nearly equal in size to itself, at Modlin, it proceeds generally in a very wide channel past Plock, Thorn, Culm, and Marienwerder, about 15 m. below which last, and about 30 m. from the Baltic, it divides into two great arms, the most easterly of which, called the *Netz*, flows past Marienburg and Elbing into the Frische Haef. The W. arm, or main stream, subdivides again at about 16 m. from the sea, the E. branch falling into the Frische Haef, and the W. making a long detour round by Dantzie. It is said, however, that during some heavy floods in the autumn of 1840 the eastern arm of the river opened for itself a direct course to the Baltic; a result which it is said the Prussian government had contemplated effecting by artificial means. This river is of very considerable commercial importance, being, as it were, the great highway of the extensive countries through which it flows; the channel by which their wheat, timber, and other products are conveyed to Dantzie and Elbing for exportation, and by which they receive supplies of colonial and other foreign produce. As it flows for the most part through a level country, it is navigable throughout the greater part of its extent. "Large flat-bottomed boats convey the produce of the countries through which it passes to the port of Dantzie, and Warsaw is thus placed in direct communication with the Baltic; while, by means of the navigation of the *Netz*, the colonial produce imported into Königsberg finds a ready access to Poland, Moravia, and Hungary." (*Granville's Travels*, i., 345.) The Vistula is connected with the Elbe by a canal from the Braa to the *Netz*, between Bromberg and Nakel; and with the Niemen by means of the canal of Augustowo. (*Dict. Géog.*, &c.)

VITERBO, a city of central Italy, Papal states, cap. deleg. of same name, in the Campagna, and on the road between Rome and Siena, 37½ m. N.N.E. the former. Population stated by Rampoaldi to be little short of 15,000. It is well built, with volcanic tufa, and well paved, having a large and handsome square, 16 parish churches, and numerous noble residences, and public fountains. Woods says it is a curious looking city, with an abundance of caverns in the perpendicular faces of the rocks, bordering a little valley passing through it. The cathedral has a range of columns on each side, with grotesque capitals supporting semicircular arches. The Trinita is a handsome modern church, in the form of a Latin cross, with a dome in the

\* This river must not be confounded with the S. Bug (an. *Hyparis*), respecting which see Bug in this Dict., 439.

## VITRE.

centre. The church of St. Francis is a large building; the transept has pointed vaulting, and there are two fine archways of the pointed style, leading into chapels, and some Gothic tombs. It boasts also a painting by Sebastian del Piombo, from designs by Michael Angelo. (*Letters of an Architect*, i., 323.) The pontifical palace is a fine building. Vitrebo is the seat of a cardinal delegate, and a court of primary jurisdiction. It has no manufactures worthy of notice; though alum, vitriol, sulphur, and other volcanic products are obtained in its neighbourhood, which abounds with mineral springs.

Vitrebo is supposed to occupy the site of the *Fanum Volturnum*, the place where the general assembly of the Etruscan nations was held on solemn occasions. The modern town was encircled with turreted walls by Desiderius, the last king of the Lombards. It has been the residence of numerous popes, several of whom are buried in its churches. In its vicinity are many villas belonging to some of the more opulent Roman families. (*Rampoldi; Woods; Cramer's Anc. Italy.*)

VITRE, a town of France, dep. Vaine, cap. arrond., on the Vaine, 23 m. W. Rennes. Pop. in 1836, ex. comm., 7899. It is enclosed by walls of Gothic character, and flanked by round towers. Vitre is ill built, dirty, triste, and destitute of any public promenade; though the environs are agreeable, and in the vicinity are two parks open to the public. About 1½ m. S. from the town is the Chateau des Rochers, the seat of Madame de Sévigné, the most accomplished of letter writers, who sometimes also occupied a house in the town. Near the town are also the ruins of the castle, formerly belonging to the dukes de La Trimouille. The peasantry of the neighbourhood wear winter cloaks of goat skins, which, with cotton hosiery, silicoth, flannels, leather, and barrels, are among the principal articles manufactured in Vitre. Wax, honey, and cantharides are here considerable articles of trade, and the town has no fewer than 22 annual fairs. Savary, the traveller, was a native of Vitre, where he first saw the light in 1750. (*Hugo, art. Ille-et-Velaine.*)

VITREY-LE-FRANCOIS, a town of France, dep. Marne, cap. arrond., on the Marne, 20 m. S.S.E. Chalons. Pop. in 1836, ex. comm., 6616. Is square shaped, and is enclosed by earth ramparts, and bastions, outside which is a deep moat. It is tolerably well laid out; and, though most of its houses are old and unprepossessing, it has a good many new buildings erected since the peace. Its church, an edifice in the Corinthian and Composite styles, was the earliest of any consequence built after the restoration of the arts, in the time of Francis I., under whom this town was founded. Vitry has a good public hall and theatre, and agreeable public walks, with some manufactures of cotton yarn and hosiery, hats, leather, &c. (*Hugo; Diet. Géog., &c.*)

VITTORIA (Span. *Vitoria*), a town of Spain in Biscay, cap. prov., on the high road between Burgos and Bayonne, 60 m. N.W. the former. Population estimated by Miñano at 12,000. It consists of an old and a new town, very different in appearance; the latter being clean and handsome, while the former is quite the contrary. The *Plaza Nueva*, a square, which, according to Inglis, is little inferior to the *Place Vendôme* in Paris, has arcades at its sides, under which are very good shops: the S. side is occupied by the town-hall, and the area serves for a market-place. The hall of the Biscayan society, orphan asylum, and general hospital are among the principal edifices. Vittoria has a collegiate and four parish churches, six conventual establishments, a school of design, public library, cabinet of coins and Roman antiquities, post-house, &c. Its manufactures comprise chairs and cabinet furniture, copper utensils, earthenware, cutlery, linens, &c., and, being one of the principal entrepôts for the trade between Navarre and Old Castile, and the ports of St. Sebastian and Bilbao, it has a considerable traffic in iron, wool, woollen and silk fabrics, articles of clothing, and colonial produce. In modern times Vittoria is famous for the decisive victory gained in its vicinity, on the 21st of June, 1813, by the Anglo-Spanish army, under the Duke of Wellington, over a French army commanded by King Joseph and Marshal Jourdan. Though the loss of men in the battle was nearly equal, the French were totally defeated, with the loss of all their artillery, baggage, ammunition, and treasure, and obliged to make a rapid retreat across the Pyrenees; this battle having all but annihilated their power in Spain. (*Napier's Peninsular War*, v., 555-580.)

VIZAGAPATAM, a seaport town of British India, presid. Madras, coast of Coromandel, cap. of a district of same name, in the N. Circars, at the mouth of a small river, lat. 17° 42' 30" N., long. 83° 24' E. It is not a place of any strength, its only defensive works being a thick wall enclosing the Zillah courthouse, hospital, other European buildings, and a bazaar in the centre of the town. The barracks and other public edifices are outside this wall. A good many well-built houses stretch along the shore; but the great insalu-

## VOLHYNIA.

brity of the town has driven most of the former European residents to Wallier, a village at some little distance. (*Hamilton's E. I. Gazetteer.*)

VLADIMIR, a government of European Russia, between the 53th and 57th degs. of N. lat., and the 38th and 43d of E. long., having N. Jaroslavl and Kostroma, E. Nijni Novgorod, W. Tver, and S. Moscow, Riazan, and Tambof. Area estimated at 17,600 sq. m. Pop. in 1838, 1,133,200. Surface almost a level plain, watered by numerous rivers, the principal being the Oka in the E., the Volga in the W., and the Kiazma, a tributary of the Oka, in the centre; all of which have, more or less, a N.E. course. The soil is not generally fertile, and a large part of the government is covered with forests, marshes, pools, and heaths. Rye, barley, oats, summer and winter wheat, millet, pease, hemp, and flax are grown; but the crops of corn are insufficient for the consumption. The gardens and orchards are pretty numerous and well attended to; and Vladimir is famous for its cherries and apples. A good many cucumbers and some hops are raised. Cattle rearing is a secondary business, and is far behind. The forests are of vast extent, those belonging to the crown alone covering about one ninth part of the entire surface. Extensive and valuable beds of iron ore have been found in the forest of Mourm; and at Vixa, on the Oka, are some of the most extensive iron-works in Russia. (*Lyall's Russia*, ii., 321-323.) The poverty of the soil, and other concurring circumstances, have turned the attention of the inhabitants toward manufactures, which appear to have succeeded better in this than in most other Russian governments. In 1830 the manufacturing establishments in the government employed 48,176 workmen. The cotton manufacture, which is by far the most extensive, is principally carried on at Chouia and Ivanova, where it employed, in 1828, 15,612 looms and 24,257 work-people. It would seem, however, that this and other branches of industry have rapidly increased in the interval; for the official returns show that, in 1839, 315 factories afforded employment to 83,655 work-people, being little short of double the number employed in the government in 1830! The manufacture of woollen and linen is of less importance; but about 4000 hands are employed in iron foundries; and about 1300 in glass and crystal works, exclusive of those employed in the production of leather, earthenware, &c. The various products of the government are sent down the Kiazma and Oka, or else to Moscow, by means of land-carriages. Corn, cotton-twist, and flax from the neighbouring governments of Kostroma, Jaroslavl, and Nijni Novgorod, are the chief articles of import. Vladimir is divided into 13 districts; chief towns, Vladimir, the capital, Chouia, and Mourm. Total public revenue about 4,000,000 roubles.

VLADIMIR, a town of European Russia, cap. of the above government, near the Kiazma, and on one of its small tributaries, 110 m. E. by N. Moscow; lat. 56° 7' 38" N., long. 40° 21' 45" E. Population estimated at 7000. (*Possart.*) Vladimir occupies a site rather more elevated than the rest of its government. It is surrounded by a ditch and earth rampart, and, like almost all the ancient towns of Russia, is divided into three portions. Its principal street is long, wide, and lined with houses of wood and stone intermixed. The cross streets are mostly mean. The principal structure is the cathedral of the Assumption, a square edifice, surmounted by five domes, and richly ornamented inside, though much less magnificent than formerly. There are about a dozen other churches. The former palace of the archbishop now serves for a seminary. The governor's house, courthouse, gymnasium, a nunnery, &c., are brick edifices. Vladimir is not considered a wealthy town or a principal emporium, owing partly to its distance from any large navigable river, and partly to the proximity of Moscow. Being, however, on the great road to the fairs of Nijni Novgorod and Irbt, and on the grand line of communication between Russia and Siberia, it often presents a busy and cheerful aspect. Some of its inhabitants are occupied in making linen cloths and leather; and many others in the cultivation of fruit, particularly cherries, which are grown in great quantities in the neighbourhood. The era of its foundation is uncertain; some authors place it in the 10th, and others in the 12th century. Vladimir was, however, the capital of the grand duchy of Russia from 1157 till 1323, when that distinction was transferred to Moscow. (*Lyall's Trav. in Russia; Possart; Schützer, &c.*)

VOGHERA, a town of N. Italy, Sardinian dom., div. Alessandria, cap. prov., on the Staffora, 21 m. E. by N. Alessandria. Pop. in 1838, 10,706. It is well built, is surrounded by walls, has a good market-place, a magnificent collegiate church, a Jesuits' college, several monasteries, large barracks, and a good hospital. It is the residence of a governor, and the seat of a provincial court of justice: it has an active trade in corn, wine, and silk. (*Rampoldi, &c.*)

VOLCANO. See LIPARI ISLANDS.

VOLHYNIA, a gov. of European Russia, formerly comprised in the kingd. of Poland; principally between the 50th

## VOLNEY.

and 52d degs. of N. lat., and the 24th and 29th of E. long., having N.W. and N. the govs. of Grodno and Minsk, E. and S.E. Kief, S. Podolia, S.W. Austrian Poland, and W. the palatinate of Lublin. Area estimated at 22,740 sq. m. Pop. in 1838, 1,314,100. It is in general an undulating plain; and the hills, which are the last ramifications of the Carpathians, though they nowhere rise to 300 feet above the sea, give an agreeable variety to the scenery. The Bug rises in this province: the other principal rivers are the Sty, Goryne, &c., tributaries of the Pripietz. Along some of these are extensive marshes and beds of turf; but in general the land is very fertile, producing, at an average, a considerable surplus of corn above the consumption. A good deal of flax and hemp is also grown. Agriculture is, however, not more advanced than in the rest of Russian Poland, and the gardens and orchards, particularly the former, are much neglected. The climate, though comparatively mild, is not warm enough for the vine. The forests comprise oak, beech, lindens, firs, pines, &c., and are very extensive, though only about 44,754 deciatines of forest land belong to the crown. The pastures are excellent, and well adapted for the fattening of cattle; a good many sheep, hogs, and poultry are kept. Volhynia has a breed of horses smaller than the generality of those of Poland. Fishing is an occupation of some importance; bog-iron, mill-stones, potter's clay, nitre, and flint are among the mineral products. Though agriculture is the chief occupation of the inhabitants, the manufacturing industry of Volhynia is greater than that of most other parts of Russian Poland. The women, almost everywhere, spin and weave different fabrics; and leather, glass, and earthenware, paper, potash, tar, charcoal, &c., are generally made. The principal exports are, however, corn, cattle, hides, flour, wool, wax, honey, and other rural produce. In 1835 the value of the exports was estimated at about 12,165,000 roubles, and that of the imports at 15,073,000 roubles. The trade is principally in the hands of the Jews, of whom there are about 40,000 in the government. The rest of the population consists of Rusniaks, with Poles in the towns, and some Great Russians, gipsies, Tartars, Moldavians, and Germans. The inhabitants are mostly of the Greek, or united church. Volhynia is divided into 12 districts; principal town, Zytounir or Jitounir, the capital. A large annual fair is held at Easter at Berdichef. Public education appears to be less backward in this than in most of the Russian governments; and in 1832, besides the government printing press, there were six others, and a lithographic press. Volhynia, like Podolia, is subordinate to the military governor of Kief, but is one of the Polish provinces, which preserves, in some degree, its ancient constitution and laws. (*Schmitzler, La Russie; Ponsart, Das Kaiserth. Russland, &c.*)

VOLNEY, P. L. Oswego co., N. Y., 153 W.N.W. Albany, 375 W. Bounded S.W. by Oswego r. Drained by Black creek. It contains two churches, a Methodist and Presbyterian, seven stores, one grist-mill, five saw-mills; one academy, 147 students; 18 schools, 939 scholars. Pop. 3155.

VOLOGDA, the largest government of European Russia, after that of Archangel, between the 58th and 64th degs. of N. lat., and the 38th and 60th of E. long., having N. Archangel, W. Olonetz and Novgorod, S. Jaroslavl, Kostroma, and Viatka, and E. the Ouralian mountains, separating it from Tobolsk. Area estimated at upwards of 145,800 sq. m. Pop. in 1838, 747,500. Except in the E., where it is covered with the Ouralian mountains, the surface generally is an undulating plain, comprised in the basin of the N. Dwina, which is its largest river. The general slope is accordingly to the N.W. In the S. and S.W. the soil is fertile, but elsewhere it is sandy or thin, and the greater part of the surface is covered with marshes and forests of pine, birch, oak, &c. Though the climate varies with the situation, it is, speaking generally, very severe; it is far, however, from being unhealthy, and instances of longevity are frequent. The grains principally cultivated are rye and barley; but the produce of corn is insufficient for the consumption. Hemp, flax, and hops succeed, as do beans and peas. Cattle and horses are numerous and good; but a large part of the government being uncultivated and in a state of nature, the chase necessarily occupies much attention. The forests, which are its principal source of wealth, are of great extent, those of the crown only covering 29,558,000 deciatines of land. Granite, marble, salt, flints, copper, and iron are all obtained in Vologda. In 1834, there were 114 manufacturing establishments, principally for woollen and linen fabrics, soap, leather, potash, glass wares, and paper. Distillation is also very extensively carried on. Furs, tallow, pitch, wooden articles, masts and timber, turpentine, and other raw products are the great articles of export; being sent for the most part, into the governments of Archangel and Tobolsk. The population is principally Russian, but include some Zyrians or Surjans of Finnish stock; and in the N. are some wandering Samoy-

## VORONEJE.

ede tribes. Public instruction, owing to the thinness of the population, is necessarily very limited; but it has been materially increased of late years. This territory is divided into 10 districts: the chief towns are Vologda, the capital, and Ustug-Velikii.

VOLOGDA, a town of European Russia, cap. of the above government, near its S.W. extremity, 352 m. E. by S. Petersburg; lat. 59° 13' 30" N., long. 40° 21' 15" E. Pop. in 1834 estimated at 14,000. It is built on both sides the river Vologda, and is supposed to be one of the most ancient towns in Russia. Most part of its houses are still of wood, but the buildings in stone are increasing, and several of its churches are of that material. It has two cathedrals, one of which was rebuilt in 1832. The palaces of the archbishop and governor, the prison, gymnasium, hospital, various asylums, and an episcopal seminary, are conspicuous edifices. Near the town is a famous convent, founded in 1371.

Vologda has manufactures of soap, potash, cordage, bells, and tallow candles; for which last it is famous over all the N. of Russia. Its trade is considerable, which is principally with the Baltic, Germany, and England; also with Siberia, to the boundaries of the Chinese empire. (*Ponsart; Schmitzler, &c.*)

VOLTERRA (an. *Volaterræ*), a town of central Italy, in Tuscany, prov. Pisa, on a steep hill near a small tributary of the Cecina, 33 m. S.W. Florence. Pop., including its suburbs, about 6000. It has a citadel, now-used as a state prison; a hospital, a cathedral, and many other churches; a very tolerable inn, a large and fine town hall, a theatre, a Piarist college, and a seminary. Its inhabitants are principally agriculturists, but a few of them are engaged in the manufacture of earthenware vases and plaster figures.

Even if we had not the express authority of Dion. Halicarnassus, (lib. 51), for assigning to Volterra a place among the 12 principal cities of ancient Etruria, the extent of its remains, its massive walls, vast sepulchral chambers, and numerous objects of Etruscan art, would alone suffice to show its antique splendour and importance, and claim for it that rank. Its walls were formed, as may yet be seen, of huge massive stones piled on each other without cement; and their circuit which is still distinctly marked, embraced a circumference of between 3 and 4 m. (*Cramer's Anc. Italy*, i. 185.) Two of its original gates are still in existence; one, called the Gate of Hercules, consisting of two arches, is in a very perfect state, and the other leads to an ancient Etruscan burial ground, in which are some remarkable tombs. Under the Romans it was a colony and municipium, and the walls of the modern town, 2 m. in circuit, are said to have been built by the emperor Otho, and are still in good preservation. There are several other Roman antiquities, including a *piscina* and what are called the baths of Otho. Volterra has also a public museum, containing numerous remains of antiquity discovered in the neighbourhood. Perseus, the satirist, is generally supposed to have been a native of Volterra, where he is said to have been born A.D. 34. (*Rampaldi; Cramer's Anc. Italy, &c.*)

VOLUNTOWN, P. L. Windham co., Ct., 56 E. by S. Hartford, 374 W. Drained by Patchaug r. and a branch of Wood r. It contains two churches, a Congregational and Baptist, two stores, two cotton factories with 2760 spindles; nine schools, 737 scholars. Pop. 1185.

VORONEJE, or WORONETZ, a gov. of European Russia, between lat. 48° 40' and 53° N., and 38° and 43° E. long.; having N. the governments of Riazan and Tambov; E. Saratov and the territory of the Don Cossacks; S. the latter and the government of Ekaterinoslaf; and W. Kharkoff, Koursk, and Orlof. Area estimated at 28,700 sq. m. Pop. in 1838, 1,507,300. Surface undulating, and soil in general good; this being, in fact, one of the most productive governments in the empire. Principal rivers, the Don and some of its tributaries. Climate comparatively mild; the rivers being covered with ice for only two or three months of the year, and the government producing most of the products of temperate climates. Of 6,876,000 deciatines (1 deciat. = 2.7 acres) comprised in the government, the arable lands have been estimated to include 2,711,800, pasture lands, 2,818,000 do., and forests, 620,755 do. In good years a surplus is raised of about 1,500,000 chetwerts of corn beyond the home consumption. Besides wheat, peas, and beans, poppies, tobacco, hemp, and flax are grown; and, in the gardens, melons, cucumbers, onions, &c., in large quantities. Water-melons, indeed, are cultivated for the markets of Moscow and Petersburg; being planted in open fields covering whole acres of land. In some parts canes and reeds are used for fuel, but in general the forests furnish a sufficient supply of fire-wood. Oaks are numerous and luxuriant; pine woods are few. In 1832 the cattle in the government were estimated at 550,000 head; the sheep at nearly a million, and 11,600 horses were kept in 83 studs. Honey is an important product. Iron, limestone, and salt-petre are among the minerals. Manufactures of coarse woollens and other fabrics are rapidly increasing, having

## VOSGES.

more than doubled between 1821 and 1835. The number of distilleries decreased during the same period; but we are not aware whether the production of spirits has undergone any corresponding decrease. The exports from the government consist principally of corn, cattle, skins, honey and wax, fruits, &c.

This government is divided into 12 districts: chief town, Voroneje, the capital. Except a colony of Germans near Ostrogjok and some gipsies, the population consists in the S. of Cossacks and White Russians, in the N. of Great Russians. Voroneje is under the same governor-general with Kiazan, Orel, Tambor, and Saratof. The total revenue of the crown from this government amounts to about 15,000,000 roubles.

VORONEJE, a town of Russia, cap. of the above gov., on the river of the same name, near its confluence with the Don, and 290 m. S.S.E. Moscow. Pop. 18,600. (*Possart.*) It stands on a steep height, and might easily be rendered a fortress of some strength, as it is not commanded by any other hill, and is partly surrounded by a marsh for several months of the year. It consists of three portions, the upper town, lower town, and suburbs. "It has some spacious streets, but a great many which are very mean: the suburbs are as black and gloomy as a country village. The principal street has a noble appearance, its sides being lined with massy and handsome edifices, many of them the property of the crown, as the governor's and vice governor's houses, the tribunals, postoffice, commissariat academy, &c. The Moscow (Moskovskaya) street is also very fine, and in it are the archbishop's palace, with an adjoining cathedral. The shops, or bazaars, are very respectable." (*Lyall's Trav.*, ii., 303.)

Voroneje has 18 stone churches, two convents, an exchange or *gostinot-dvor*, for the warehousing, exhibition, and sale of merchandise, an Episcopal seminary, schools for the children of the clergy, military, civil employés, and citizens, a hospital for 310 sick persons, military orphan asylum, &c. It is one of the most flourishing towns in the S. of Russia; and its merchants carry on a lucrative trade with the Black sea, Crimea, and Turkey, and travel annually to Tobolsk, to buy furs, which they afterward take to the great German fairs. The town has also some soap, tallow, leather, and woollen cloth factories. It is supposed to be among the oldest Russian towns, and is spoken of as existing in the 12th century. Here Peter the Great built a palace, and established a dock-yard, arsenal, &c.; but the latter establishments were afterward removed successively to Usten, Tavrof, and Rostof; and nearly all traces of the palace and magazines have been obliterated by the frequent fires which the town has since suffered. (*Schnitzler, La Russie*; *Possart*; *Lyall's Trav. in Russia*, &c.)

VOSGES, a dep. of France, reg. N.E., principally between the 48° and 49° of N. lat., and the 5° and 7° of E. long., having N. the depts. Meurthe and Meuse, E. the dep. of the Rhine, S. Haute-Saône, and W. Haute-Marne: Area, 585,963 hectares. Pop. in 1836, 397,987. This department derives its name from the Vosges (Germ. *Wasgau*) mountains, a chain which extends parallel with the Rhine, separating the departments of Haute and Bas-Rhin on the E. from those of Haute-Saône, Vosges, and Meurthe on the W., stretching also into Rhenish Bavaria, and terminating to the N.E. in mont Tonnerre. These mountains usually rise between 4000 and 5000 feet above the sea, and their summits are covered with snow for most part of the year. They send off a remarkable continuation, the Fancilles mountains, E. and W. through this department, by the ramifications of which nearly its whole surface is covered. The Moselle, Meuse, Meurthe, Madon, Saône, &c., rise in this department, all of which, except the Saône, have a N. course. Small lakes are numerous. The arable land, which is said to comprise 244,745 hectares, is not generally fertile; the meadows comprise 76,330 hectares; woods, 129,474 hectares; and heaths, wastes, &c., 36,550 hectares. In a portion of the department called "the plain," to the W. of Epinal, agriculture is said by Hugo to be pretty well advanced. The land is divided into very small properties; so much so, that in 1835, of 148,699 properties subject to the *contribution foncière*, 87,690 were assessed at less than five francs, and only 43 at 1000 francs or upward. In 1835 the produce of corn, principally oats, wheat, and rye, was estimated at less than 2,000,000 hectolitres, and the potato crop was about as much. The rearing of stock is the most important branch of husbandry, and a greater number of cattle are kept in this than in any other of the N.E. departments; in 1830 they were reckoned at about 140,000 head. Sheep are much less numerous, and the annual produce of wool is said by Hugo not to exceed 45,000 kilogr. The annual produce of cheese may be about 20,000 kilogr.; and that of wine (of very indifferent quality) about 150,000 hectolitres, or about 120,000 kilogr. of hops are annually sent to Paris. Cherries are grown in large quantities, and the department is famous for its *Kirschenwasser*. A good many hogs are

## WAKE.

fattened in the mountains. The forests abound in good fir timber, great quantities of which are floated down the rivers, as deals and rough timber. Iron is the chief mineral product; but it also produces coal, argenteiferous lead, copper, manganese, granite, marble, porphyry, &c., though many of these resources are much neglected. The manufacture of steel and iron goods hold the first rank. Knives and forks are made at Brûyères; bayonets, &c., at Sionne, and nails at Neufchâteau; plate iron is made in large quantities at various places; and Plombières is famous for its cutlery. Cotton stuffs are made in the arrondissements of Remiremont and St. Dié. Lace, musical instruments, barrels, and wooden shoes are considerable articles of manufacture; and there are various glass and marble works, tanneries, breweries, &c. Vosges is divided into five arrondissements; chief towns, Epinal, the capital; Mirecourt, Neufchâteau, Remiremont, and St. Dié. It sends five members to the chamber of deputies. Number of electors, in 1838-39, 999. Total public revenue, 1831, 7,165,857 francs. (*Hugo*, art. *Vosges*; *French Official Tables*, &c.)

## W.

WAAL, a river of the Netherlands, see RHINE.

WABASH r., Ia., rises in Darke co., O., and, flowing N.W. to Huntington co., Ia., it approaches the junction of St. Joseph's river with St. Mary's river, which form Maumee river. It then crosses the state in a W. and S.W. direction, and a little below Terre Haute it becomes the boundary between Indiana and Illinois, until it enters Ohio river, 128 m. above the Mississippi, and 68 m. above the mouth of Cumberland river. It is the largest tributary of the Ohio on the N. side, and probably the second in the whole course of that river. It is navigable by steamboats to Lafayette, and, by means of the Wabash and Erie canal, it connects lake Erie with the Ohio river. This canal, which runs along its border, and is now completed, is one of the most important works of the kind in the western states. It receives several important tributaries, the principal of which are Salamanie, Mississinewa, Tippecanoe, Vermillion, Embarras, and, toward its mouth, White, and Little Wabash rivers.

WABASH, county, Ia. Situated centrally in the N. part of the state, and contains 415 sq. m. Watered by Wabash, Eel, and Salamanie rivers. It contained in 1840, 2775 neat cattle, 1065 sheep, 9468 swine; and produced 8703 bushels of wheat, 75,644 of Indian corn, 9556 of oats, 14,397 of potatoes, 20,190 pounds of sugar. It had 11 stores, six grist-mills, nine saw-mills, four tanneries; two schools, 45 scholars. Pop. 2756. Capital, Wabash.

WABASH, county, Ill. Situated toward the S.E. part of the state, and contains 180 sq. m. Bounded S.E. by Wabash river, W. by Bon Pas river. It contained in 1840, 5570 neat cattle, 3609 sheep, 10,392 swine; and produced 19,156 bushels of wheat, 166,659 of Indian corn, 1394 of barley, 51,062 of oats, 12,533 of potatoes, 9978 pounds of tobacco, 2295 of sugar. It had 11 stores, one flouring-mill, five grist-mills, eight saw-mills, one oil-mill, six janneries, four distilleries, two printing-offices, two weekly newspapers; two academies, 32 students; two schools, 60 scholars. Pop. 4240. Capital, Mount Carmel.

WACHUSETT, int., an isolated peak in the N. part of Princeton t., Worcester co., Mass., 3600 feet above the level of the sea, and is the highest land in the state, E. of Connecticut river. It is often visited for the grand and beautiful prospect presented from its summit.

WAGRAM, a village of the archduchy of Austria, country below the Enns, on the left bank of the Rossbach, 11 m. N.E. Vienna. This village is celebrated in military history for the great battle fought in its vicinity, on the 6th of July, 1809, by the grand French army under Napoleon, and the Austrians under the archduke Charles. The former gained a complete victory; the Austrians lost above 20,000 men taken prisoners, besides a vast number killed and wounded. This great victory led to an armistice, followed by the treaty of Schonbrun.

WAITSFIELD, p. t., Washington co., Vt., 19 m. S.W. Montpelier, 506 W. Watered by Mad river and its tributaries. It contains three churches, a Congregational, Methodist, and Union, two stores, two falling-mills, three grist-mills, five saw-mills, two tanneries; nine schools, 396 scholars. Pop. 1048.

WAKE, county, N. C. Situated in the centre of the state, and contains 1140 sq. m. Watered by Neuse river and its branches. It contained in 1840, 15,248 neat cattle, 11,574 sheep, 38,883 swine; and produced 38,379 bushels of wheat, 79,011 of rye, 535,274 of Indian corn, 79,011 of oats, 55,965 of potatoes, 550 pounds of rice, 54,247 of tobacco, 2,391,996 of cotton. It had 53 stores, two flouring-mills, 32 grist-mills, 16 saw-mills, one paper-mill, 67 distilleries, four

## WAKEFIELD.

printing-offices, five weekly and one semi-weekly newspapers; one college, 77 students; 13 academies, 283 students; 10 schools, 169 scholars. Pop.: whites, 12,113; slaves, 7,996; free coloured, 1009; total, 21,118. Capital, Raleigh.

WAKEFIELD, a parl. bor., market town, and par. of England, W. Riding, co. York, lower div. of Agbrigg, weapont. Agbrigg and Morley, on the Calder, 30 m. S.W. York, and 9 m. S. Leeds. Area of parish, comprising the townships of Wakefield, Stanley-cum-Vrenthorpe, Alverthorpe-with-Thornes, and the chapelry of Horbury, 9390 acres. Pop. in 1831, 24,538; in 1841, 28,321. The parliamentary borough, however, includes only the township of Wakefield (population in 1841, 13,777), with small portions of Alverthorpe and Stanley. The town is situated on the declivity of a hill sloping to the river, which is here crossed by a handsome stone bridge of nine arches. It is well built, the houses being mostly of brick; streets spacious and regular, paved, and lighted with gas; and since 1839 the town has been plentifully supplied with pure water by the W. Waterworks company. The market-place is small, but is well supplied with butchers' meat, fruit, vegetables, and other articles.

Wakefield is one of the principal country corn markets in England; and the new corn exchange at the head of Westgate is in all respects suitable for the despatch of the important business of which it is the centre. On the S.W. side of Wakefield township the buildings advance in a continuous street into that of Alverthorpe, now embodied in the parliamentary borough; and at the W. end of the town, and in Stanley township, are a great many buildings known by the name of East Moor, which also form part of the borough, which further comprises the small village of Thornes on the S. The latter, in fact, is connected with the town by an almost continuous line of houses and warehouses. (*Boundary Report*.) The parish church of All Saints is a handsome edifice of English architecture, 156 feet in length and 60 feet in width, founded in the reign of Henry III., but retaining few of its ancient features. It has a square tower, with battlements and pinnacles, surmounted by a spire, 237 feet in height, said to be the highest in the county. The living, a vicarage in the gift of the crown, is worth £547 nett. The church of St. John, in the district of the same name, erected in 1795, was, in 1815, rendered parochial jointly with All Saints; the living, a perpetual curacy, in the gift of the vicar of Wakefield, is worth £118 a year. In 1840 Trinity church, in George-street, built by subscription, and vested in trustees under the Church Building Acts, was licensed for public worship. Here is also a Roman Catholic chapel, two places of worship for Independents, two for Wesleyans, and others for Friends, Primitive Methodists, Unitarians, and Baptists. In the centre of the bridge, projecting from its E. side, is a richly ornamented Gothic chapel, 30 feet in length by 24 in breadth, believed to have been founded by Edward III.; but rebuilt and decorated by Edward IV., to commemorate the death of his father, Richard, duke of York, and his partisans at the battle of Wakefield. But (*quantum mutatus*!) this fine old building has latterly been degraded into a counting-house. In the market-place is a Doric cross with an open colonnade supporting a dome, and containing a small room in which the street commissioners transact business. The music saloon, subscription library and news room in Wood-street, is a handsome building. Here, also, is a literary and philosophical society, a mechanics' institute, a masonic lodge, a theatre, &c. The new and commodious corn exchange, at the top of Westgate, contains, exclusive of the exchange and several offices and shops, a very large assembly-room, with ante-rooms. The building called the Tammy-hall, for the exhibition and sale of woollens, has long been occupied as a worsted manufactory. The free grammar school, founded by Queen Elizabeth in 1592, and since enriched by various private benefactions, has a considerable income, and has long enjoyed a high reputation. It is open, free of expense, to the sons of the inhabitants desirous of a classical education, and has at present (1842) upward of 90 scholars. It has an attached writing school, and four exhibitions to Cambridge, and one to Oxford. Some very distinguished personages have been educated in this school, among whom may be mentioned Dr. John Potter, archbishop of Canterbury, author of the popular and excellent work on Grecian Antiquities, a native of the town; Dr. Radcliffe, founder of the library at Oxford which bears his name, also a native of the town; and Dr. Bentley, the eminent critic and scholar, a native of Oulton, in the vicinity. The green-coat school, founded in 1707, with an income of above £500 a year, clothes and instructs about 75 boys and 50 girls; and among other schools is a charity school for 106 poor boys and 50 girls, two national schools established in 1832, a school of industry, a Lancastrian and several Sunday schools, in all affording instruction to nearly 2000 children. The proprietary school, opened in 1834, is a fine, collegiate-looking building, in which about 200 pupils receive a classical and com-

## WALCHEREN.

mercial education. The West Riding Pauper Lunatic asylum, erected in 1817, 1 m. N.E. of the town, is a noble building capable of accommodating above 400 patients. A dispensary and fever ward was established a few years since; and there are, well endowed almshouses for both sexes. Wakefield had formerly an extensive manufacture of woollens and worsted yarn; but this, owing to the superior facilities for carrying on the manufacture enjoyed by other places, or their greater attention to the business, has greatly declined: still, however, a considerable business is carried on in the manufacture of spinning worsted and in dyeing; and it is an important mart, not merely for corn, but also for wool and cattle. Great quantities of wool are sent from all parts of the surrounding country to be disposed of by the wool factors; the cattle fairs, held every fortnight, are very extensive; maling is also carried on to a considerable extent; and there is a soap-works at Walton, in the vicinity, which produced, in 1839, 1,127,527 lbs. hard soap. The coal mines in the parish employ a great many hands.

Wakefield, though an inland situation, communicates by the Aire and Calder Navigation and various canals with Leeds, Hull, Manchester, and Liverpool, and several branch railways lead from the town to the different collieries in the vicinity. The W. Riding bank of Leatham, Tew and co. and the Wakefield and Barnsley banking company, have establishments here. The North Midland railway from Leeds to Derby passes by Oakenshaw (Wakefield station), 1½ m. S.E. from the town; and the Leeds and Manchester railway passes the S. end of the town. The station near Kirkgate is within a short distance on the town side of the bridge over the Calder; but the most important station is at Normanton, 5 m. N.E. from the town, at the junction of the North Midland, Manchester and Leeds, and York and North Midland railways. A very handsome hotel has been erected at this central station for the accommodation of passengers. The town is under the jurisdiction of a constable elected by the inhabitants. Quarter sessions are held in the courthouse, a handsome edifice in Wood-street; and petty sessions for the district in the courthouse every Monday, by the county magistrates. A court for petty causes, and the recovery of debts under £5, is held every three weeks by the steward of the manor. Here also is the W. Riding register office; the office of the clerk of the peace; and the rolls office for the extensive manor of Wakefield. The house of correction for the W. Riding of Yorkshire is at Wakefield; it is built on an improved plan, and comprises a tread-mill, 307 cells, separate yards, a chapel, &c., and is now (1842) about to be considerably improved and enlarged. The prisoners are employed in weaving coarse cloth, calicoes, &c. The Reform Act conferred on Wakefield, for the first time, the privilege of sending a member to the House of Commons. Reg. electors in 1841-42, 889.

At the era of Domesday Survey, Wakefield, with its dependencies, was in the hands of the crown. The battle of Wakefield fought in the vicinity of this town on the 24th of December 1460, was one of the most important gained by the Lancastrians during the civil wars: the latter under Queen Margaret, having totally defeated the Yorkists under the duke of York, who fell in the battle, and whose son, the earl of Rutland, was assassinated immediately thereafter. In 1554, Wakefield was united to the Duchy of Lancaster. The manor which extends for more than 30 m. W. of the town, including above 150 towns, villages, and hamlets, and about one eighth part of the entire population of Yorkshire has belonged to the family of the duke of Leeds since 1700, and was devised by the late duke to his son-in-law, Walter Sackville Lane Fox, Esq., M.P. the present lord of the manor. Market days, Fridays, and every alternate Wednesday, for cattle and sheep. Fairs, July 4th and 5th and November 11th and 12th, for horses, cattle, hardware, &c. (*Allen's Yorkshire; Baines' Gaz. and Direct. of York; Parl. Reps., and private Information.*)

WAKEFIELD, p. t., Carroll co., N. H., 46 N.E. Concord, 527 W. Watered by ponds which give rise to Salmon Falls r. Lovewell's pond in the S. part is noted for a celebrated battle with the Indians in 1725. It contains two churches, a Congregational and Free-will Baptist, five stores, two fulling-mills, one cotton factory with 500 spindles, four grist-mills, five saw-mills; nine schools, 361 scholars. Pop. 1396.

WALCHEREN, the most W. of the islands of Holland, prov. Zealand, between the E. and W. Scheidt, having on the W. the N. sea, or Atlantic, and on the E. the Narrow Channel, by which it is separated from the island of Beveland. Middleburg, the cap., in the centre of the island, is in lat. 51° 30' 6" N., long. 3° 37' 30" E. It is of a compact circular shape; length, E. and W., about 12 m.; greatest breadth, 10 m. Pop. about 45,000. The surface is quite level, and below high water mark. Its W. side, or that facing the N. sea, is defended against its encroachments partly and principally by a line of sand-hills or *dunes*, and partly (at W. Capelle) by a very strong dyke: its sides,

## WALDECK-PYRMONT.

washed by the E. and W. Scheldt, are also defended by prodigious dykes. This is the most fertile, most populous, and best cultivated of all the Dutch islands: the inhabitants are mostly in easy circumstances; and besides Middleburg, the capital, it has the towns of Flushing and Vere, and several flourishing villages. It produces excellent crops of wheat and madder, considerable quantities of the last being sent to England. The climate, though not injurious to natives, is apt to exercise an exceedingly unfavourable influence over strangers. This was strikingly exemplified in the result of the ill-fated expedition of the British troops to Walcheren under the earl of Chatham in 1809; a great proportion of the force died on the spot from the attacks of a malignant marsh fever; while many of those who survived had their constitutions shattered for ever. (*Géographie de Busching*, xiv. 140, Fr. ed.; *Diet. Géog.*, &c.)

WALDECK-PYRMONT, a principality of W. Germany, consisting of two separate portions, the most southerly and principal of which has Prussian Westphalia on the N. and W., while the most northerly and smaller, including the town of Pyrmont and adjacent territory, is almost surrounded by Lippe Detmold and Hanover. Aggregate area, 466 sq. m. Pop., in 1838, 56,480; all Lutherans, except about 500 Roman Catholics and 500 Jews. Surface hilly, having a mean elevation of 1000 ft. above the sea; its mean annual temp. is about 45° Fah. Both Waldeck and Pyrmont belong to the basin of the Weser, their principal rivers being its tributaries, the Eder, Diemel, and Emmer. About 152,300 morgen of land, or nearly one third part of the surface is covered with forests; the trees being principally beech and oak. It produces an adequate supply of corn for home consumption, with potatoes, fruit of various kinds, and flax. Cattle-breeding is an important branch of industry, and within the last 20 years the cattle have been greatly improved by crossing with the breeds of Switzerland and the Tyrol. Copper, iron, salt, alabaster, marble, slates, &c., are raised; and a large proportion of the prince's revenue is derived from the mineral waters of Pyrmont, which is one of the principal spas of Germany. Manufactures unimportant; those of iron goods, which were formerly considerable, having, of late years, greatly declined: at present the principal are those of linen and woollen stuffs, paper, leather, and cotton hosiery. The chief exports are fine wool, corn, cattle, iron, mineral waters, and a few manufactured articles.

The constitution is a limited monarchy, the diet consisting of 18 members of the nobility, 13 representatives of towns, and 10 deputies from the rural districts. The diet has the voting of the supplies, &c., but most part of the public business is carried on by a committee consisting of three members from each of the three estates composing the diet. The latter and the committee meet once a year. The territory is divided into five districts. Arolsen, a town of 2050 inhabitants, on the Aar, a tributary of the Diemel, is the cap. and seat of government; Pyrmont, on the Emmer, one of the oldest watering-places in Europe, with about 3000 resident inhabitants, is the other principal town. Total public revenue estimated at 230,000 rix dollars a year; public debt 680,000 do. Waldeck-Pyrmont holds the 29th place in the German confederacy; having one vote in the full diet, and one in the committee along with the principalities of Hohenzollern, Reuss, Lippe, and Liechtenstein. It contributes 519 men to the confederate army. (*Berghaus*; *Allg. Länder u. Völkerkunde*, iv. &c.)

WALDO, county, Me. Centrally situated toward the S. part of the state, and contains 812 sq. m. Bounded E. by Penobscot river and bay. Watered by St. George and Marsh rivers. Penobscot bay and river afford great facilities for navigation. It contained, in 1840, 27,826 neat cattle, 55,318 sheep, 10,451 swine; and produced 78,304 bushels of wheat, 6749 of rye, 52,784 of Indian corn, 30,103 of barley, 84,088 of oats, 1,066,424 of potatoes, 4675 pounds of sugar. It had 196 stores, capital \$368,895; 18 lumber yards, capital \$54,400; capital invested in the fisheries \$72,373; 13 fulling-mills, 41 grist-mills, 117 saw-mills, 26 tanneries; four academies, 1946 students; 267 schools, 14,740 scholars. Pop. 41,509. Capital, Belfast.

WALDOBOROUGH, p. t. and port of entry, Lincoln co., Me. Bounded S.W. by Muscongus bay. Watered by Muscongus river. It has considerable navigation and ship-building, and contains 22 stores, three fulling-mills, four grist-mills, 10 saw-mills, three tanneries, one printing-office, one weekly newspaper; one academy, 45 students; 22 schools, 1169 scholars. Pop. 3661.

WALES. See ENGLAND AND WALES.

WALES, p. l., Erie county, N. Y., 18 m. S.E. Buffalo, 272 m. W. Albany; 369 W. Drained by Seneca creek. It has three stores, one fulling-mill, one woollen factory, three grist-mills, nine saw-mills, one tannery, one pottery; 16 schools, 678 scholars. Pop. 1957.

WALES (NEW SOUTH). See AUSTRALIA AND SYDNEY. It appears from the official returns, that the pop. of New South Wales amounted, in 1841, to 128,726, having

## WALLACHIA.

more than doubled within seven years! This extraordinary increase is principally to be ascribed to the stimulus given of late years to immigration.

WALKER, county, Ga. Situated in the N.W. part of the state, and contains 700 sq. m. Drained by Chatoga river and Chickamauga river. It contained, in 1840, 6396 neat cattle, 2087 sheep, 15,012 swine; and produced 17,363 bushels of wheat, 1014 of rye, 236,494 of Indian corn, 16,650 of oats, 6985 of potatoes, 14,268 pounds of tobacco, 76,307 of cotton. It had seven stores, eight grist-mills, 14 saw-mills, two tanneries, eight distilleries; one college, 15 students; nine schools, 172 scholars. Pop.: whites, 5583; slaves, 946; free coloured, 43; total, 6572. Capital, La Fayette.

WALKER, county, Ala. Situated toward the N.W. part of the state, and contains 1500 sq. m. Drained by branches of Black Warrior river. It contained in 1840, 5943 neat cattle, 1493 sheep, 12,360 swine; and produced 5587 bushels of wheat, 128,030 of Indian corn, 7584 of oats, 4707 of potatoes, 1210 pounds of rye, 4588 of tobacco, 110,917 of cotton. It had one store, six grist-mills, one saw-mill, one tannery, one distillery; 111 scholars in schools. Pop.: whites, 3820; slaves, 211; free coloured, 1; total, 4032. Capital, Jasper.

WALKER, p. l., Centre co., Pa., 94 m. N.W. Harrisburg, 186 W. Drained by Little Fishing creek. It has four stores, one furnace, two grist-mills, two saw-mills, two tanneries; four schools, 160 scholars. Pop. 1180.

WALLACHIA and MOLDAVIA (an. *Dacia Transalpinia*), two contiguous principalities of S.E. Europe, nominally included in European Turkey, but in reality under the protection of Russia. They lie principally between the 44° and 48° N. lat., and the 22° and 28° E. long., and are together of a crescent shape, enclosing Transylvania on the W. and N.W. Wallachia comprises the S. and Moldavia the E. and N. parts of the united territory; the former, from the W. round to the S.E., is divided from Persia and Bulgaria by the Danube, and the latter on the E. and N. from Bessarabia by the Pruth, and on the N.W. from the Bukovina by some branches of the Carpathians. The Sereth forms the principal line of separation between the two provs., the area, pop., &c. of which are as follow:—

	Area in sq m.	Population in 1837-39.	Chief Towns.
Wallachia	27,500	1,747,815	Bucharest.
Moldavia	17,020	1,419,105	Jassy.
Total	44,520	3,166,120	

The two principalities have each their own peculiar government; but their history is so intimately connected, and the forms of their respective governments, the language, manners, and customs of their inhabitants have always been so much alike that both may be best noticed together.

*Physical Geography and Products.*—The Carpathians, where they separate these provs. from Transylvania, usually vary in height between 3000 and 5000 ft., though some summits rise to 7000 or 8000 ft. in elevation. (*Boue Turquie*.) From these mountains the surface gradually declines to the S. and E. through regions of most picturesque character, and hill ranges and valleys of great fertility, till it terminates in a level and marshy plain from 12 to 20 leagues in breadth, which, with parts of Bulgaria and Bessarabia, constitutes what may be considered the second in point of size and importance of the great European plains. The whole country is thoroughly well watered, being intersected by the Olt, or Aluta, Jalounitza, Argish, Sereth, and other large affluents of the Danube, most of which are navigable for a considerable distance, and which annually inundate the surrounding country. The winter is very severe, particularly in Moldavia, which prov. is open to the full force of the N.E. wind; and the Danube, with its various tributaries, is generally frozen over for six weeks, during which period the ice is often strong enough to bear the passage of the heaviest artillery. In the first two months of the year, the snow is so very thick, that the communication is every where carried on by means of sledges. A damp spring succeeds; in May the summer bursts in on a sudden, during which season, though the heat during the day be excessive, the nights are cool, or even cold. The pleasantest season is the autumn, from September to the middle of November. The climate, generally speaking, cannot be said to be unhealthy; but in the plains along the Danube endemic fevers occasionally prevail, and in the hill region gotres are extremely common. Earthquakes sometimes occur, but happily they are rarely very violent. Most part of the country towards the Danube consists of a rich alluvial soil; elsewhere tertiary and calcareous, and in the Carpathians primary formations are prevalent. In the latter, ores of gold, silver, mercury, iron, copper, and other metals are found, and several mines were opened during the Russian occupation of these provinces. At present, except salt mines, few others are wrought, and the gold obtained is chiefly by washing the river deposits, an occupation almost solely confined to the gipsies, who pay their tribute partly in gold dust. Petro-

## WALLACHIA AND MOLDAVIA.

leum, sulphur, nitre, and coal are met with, but not much sought after. The salt of Wallachia, which is of the purest kind, forms an article of sale in all the bazaars of the country. Oak, pine, fir, beech, maple, elm, ash, walnut, white mulberry, &c., are the chief forest trees. The climate is unsuitable for the fig and olive; but apples, pears, plums, cherries, apricots, &c., come to perfection with little culture. Asparagus is indigenous; cabbages and artichokes grow to a great size, and cucumbers and melons are among the principal articles of food. Deer, wild goats, and hares are very numerous. Wolves, when pressed by hunger, come down from the mountains, and commit much devastation among the flocks and herds; but at other times, like the bears and other wild animals in these provs., they rarely attack a man.

**Land and Agriculture.**—The land principally belongs to the nobles, or *boyars*, though it is seldom cultivated by them on their own account. No regular system seems to be pursued as respects the arrangements between the landholders and cultivators; but, for the most part, the cultivators pay to their landlords a tithe of their whole produce of corn, and, in addition to this, they are bound to pay the land-tax and other burdens, and to work 30 days in the year for their landlords. M. Hagemester says that, though nominally free, the cultivators are virtually enslaved, and that they are still subject to great oppression. (*Commerce of the Black Sea*, 112.) Owing to their subdivision among the children, on the death of a parent, there are now but few large properties. The mode of tillage does not much differ from that in other parts of eastern Europe. Oxen are usually employed for field labour. Manure is never used; but after a crop of corn, the land is left fallow for a season, and then sown with wheat, barley, or mulze, which are the principal crops. Oats and rye are but little cultivated, maize constituting the principal part of the food of the people, and barley being used in distillation, and in the feeding of horses and poultry. No probable estimate can be formed of the ordinary produce of the wheat crops; though there can be no doubt that if the cultivators could calculate on a ready market, it might be very greatly increased. Speaking generally, the wheat of Moldavia, though inferior to that of England or Poland, is from 15 to 20 per cent. superior to that of Wallachia. In the latter prov. the wheat is mostly soft, whereas in Moldavia it is mostly hard. (*Hagemester*, 104.)

It is extremely difficult to form any fair estimate of the price at which Moldavian and Wallachian wheat might be shipped from the Danube. The kilo, or principal corn measure, differs in the two provinces, and the value of the piastre is also constantly fluctuating; and in addition to these causes of uncertainty, the duties laid on corn when exported are liable to vary, and every body knows how much the price is affected by variations of demand. On the whole, however, we are inclined to think that the cost of corn at Galatz (which see), the principal port of the principalities, has been materially underrated. In some years it has been as low as 15s. a quarter; but, in 1838, when 171,813 quarters were exported, the price varied from 23s. to 28s. 7d. a quarter. Perhaps, under a fair average demand, it might vary from 20s. to 22s. a quarter.

Immediately after having been gathered in, the corn is trodden out by horses and cattle, and laid up in pits, in consequence of which it acquires an earthy flavour, unfavourable to its sale in foreign markets. (*Hagemester*, *ubi supra*.) A good deal of wine is made on the hill slopes, particularly in Moldavia. It is mostly of very indifferent quality; but Mr. Thornton says that some of the wines are pleasant and wholesome, resembling the light wines of Provence, and that they are largely exported to Russia and Transylvania. The strength and spirit of the wine, the farther states, are increased by a process common among the rich proprietors, and practised also in Russia. "At the first approach of severe cold, the wine butts are exposed to the severity of the weather in the open air: in a few nights the body of wine is encircled with a thick crust of ice; this is perforated by means of a hot iron, and the wine, thus deprived of its aqueous parts, is drawn off clear, strong, and capable of being preserved for a long time." (ii. 820.) Ovid may have had a similar practice in view when he says, of the wine at the place of his banishment,

"Udque consistunt formam servatam, lesa"

Vinea; nec hausta meri, sed data frusta bibunt."

De Trist., l. iii. el. x. 23, 24.

The rearing of cattle, however, rather than agriculture, has always been the principal employment of the Wallachians; and the Illyrian word *vlach*, signifying a herdsman, appears to have been the original root whence their name, and that of the country they inhabit, has been derived. The chief sources of wealth in both principalities are, in fact, their flocks and herds, which find abundant and nutritive pastures in winter in the plains, and in summer on the Carpathians. The number of sheep and goats in Wallachia has been estimated at 4,000,000, and the annual pro-

duce of wool in both provs. at 40,000 quintals. The latter, which is divided into three sorts, *cigais*, *strosse*, and ordinary, is sold at from 3 to 3½, from 2 to 2½, and from 1 to 1½ piastres the oke. There is no public establishment for the washing of wool, but private individuals, sometimes wash it at home, which commonly increases the price about 40 per cent.; but the greater part is sold in the grease. Merinos have not yet been introduced into the country. About one sixth part of the whole clip is sent to France.

"The cattle of Moldavia are larger and better than those of Wallachia, for the simple reason that all branches are more backward in the latter country. Taking their size into account, Moldavia is richer in horned cattle than Wallachia, which, on the contrary, takes the lead in the number of sheep. In both the principalities the cattle and sheep are bought up by the dealers, who pasture them throughout the summer, in the view of selling or slaughtering them in August and September. A pair of good oxen commonly costs from 70 to 83 roubles; a cow is worth from 25 to 28 roubles; a sheep 3 to 4 roubles. Pasturage for a herd of 150 head is hired at a price of 150 to 250 roubles. The number of horned cattle fattened in this manner for sale may amount to 60,000 or 80,000 head. The buyers commonly advance one third or a half of the price for some months. The high price of cattle proceeds from the great consumption in Austria; into which numerous herds are annually sent, particularly from Moldavia. Bessarabia and Wallachia also furnish some, and these are always the largest and finest animals. Many of the inhabitants on the Austrian frontier are engaged in this trade. A part of the cattle, and especially the sheep, traverse the Danube for sale in Bulgaria; and previously to 1828 the number of cattle and sheep thus exported was estimated at 150,000 for Wallachia, and at 100,000 for Moldavia." (*Hagemester*, p. 140.) There are several breeds of horses; and the best, which are those of Moldavia, are bought up in large numbers for the Austrian and Prussian cavalry. (*Thornton*, ii. 322-3.) The buffalo thrives in Wallachia, and poultry and game of all kinds are in great plenty; but the flesh of the latter, as well as beef, pork, and mutton, are said to be insipid and inferior. The honey, wax, and hare-skins are, however, of the best quality; of the last about 500,000 are annually exported. Timber, yellow berries, butter, cheese, hides, staves, and masts of various sizes and descriptions, are the other chief articles of export; the Moldavian oak timber, which is much finer than the Wallachian, is well calculated for the construction of vessels, and many of the Turkish ships are built of it, and fitted out with masts and ropes of Moldavian growth. The yellow berries are inferior to those of Smyrna, and only in demand when the crop of Asia Minor is deficient; the export is, however, estimated at 600,000 okes a year. (*Wilkinson*, p. 75-78, &c.)

**Manufactures and Trade.**—Coarse woollen cloth, hats, earthenware, common linen fabrics, glass, jewellery, saddlery, vehicles, &c., are made, and there are estimated to be altogether 5000 factories of different kinds in the two principalities, inclusive of distilleries. (*Colson, Moldavie, &c.*) But, for the most part, manufactured goods are imported from other parts of Europe, in return for the raw produce of the principalities. Galatz is the grand centre for the foreign trade of the provs., and the point whence the imported goods are sent to Bucharest and Jassy. Coffee, sugar, pepper, rum, lemons, oranges, and foreign wines are the principal imports. The local consumption of the first in both provs. is estimated at 800,000 okes, of the second, 900,000 do., and of the third, 30,000 okes yearly. Cotton and woollen goods, earthenware, &c., are brought chiefly from Germany and England, and Russia supplies the principalities with large quantities of furs, taking in return spirits, wines, and specie. (*Wilkinson*, &c.)

**People and Condition.**—Notwithstanding the various irruptions of the Goths, Gepide, Lombards, Huns, Tartars, and Turks into these provs., their inhabs. at the present day appear to be, with comparatively little intermixture, the descendants of the ancient Dacians, to whom, as represented on Trajan's column at Rome, both in features and costume, Mr. Paget says, the modern Wallachs bear a remarkable resemblance. (*Paget's Hungary*, &c., ii. 180.) They still call themselves *Roumuni*, or Romans, and their country *Zara Rouman-Esha*; and it is a curious fact, that in a province which was among the last annexed to the Roman empire, and in a situation more exposed than any other to the irruptions of invaders from the E., the common dialect now spoken contains, together with many Slavonic, and Greek terms, a very large infusion of purely Latin words; so much so that a stranger speaking in Latin is generally understood by the natives. "In appearance the common Wallach present a decided difference from either Magyar, Slave, or German. In height he is below the medium, and generally rather slightly built and thin. His features are often fine, the nose arched, the eyes dark, the hair long, black, and wavy; but the expression is too often one of fear

## WALLACHIA.

and cunning to be agreeable. The dull, heavy look of the Slovak is seldom seen among them, but still more rarely the proud self-respecting carriage of the Magyar." (*Paget*.) The long continued misgovernment to which the Wallachians and Moldavians have been subject, has corrupted their morals, weakened their energies, and given them most of the vices of slaves. All the worst features of Turkish despotism were exhibited in these provinces in their most revolting and odious forms. And hence we need not be surprised, that though not without hospitality, and some other redeeming qualities, the inhabitants are treacherous, revengeful, indolent, besotted, and often cowardly. The women, indeed, on whom most of the labour devolves, do not share in the idleness of the men, but their industry exhibits much want of method and thriftiness, and "to be as busy as a Wallach woman, and do as little," is a proverbial comparison among the German settlers in Transylvania, &c. (*Paget's Hungary*, li. c. vi. vii., to which, and the art. *Hungary*, vol. i. p. 1139, in this Dict. we beg to refer the reader.)

Mr. Paget says, "I had pitied the Wallachs of Transylvania, till I saw their brethren of the principalities of Wallachia and Moldavia." I never saw two countries of their extent so fruitful in resources. Yet, with all their advantages, I never saw a country so thinly populated, nor a population so excessively poor and miserable." (li. 467.) The peasants' dwellings throughout the country are all built in the same style and of the same size. The walls are of clay, and the roofs thatched with straw, neither of which is calculated to protect the inmates from the inclemency of the weather. In winter the people retire to caves under ground, kept warm by fires made of dried dung and branches of trees; and which, at the same time, serve for cooking their scanty food. Each family, however numerous, sleeps in one of these subterraneous habitations, their beds consisting of a piece of coarse woollen cloth, which serves in the double capacity of mattress and covering. These underground dwellings, have, in fact, been the winter residence of the inhabitants of Scythia from the remotest antiquity, and have been admirably described by Virgil:

"Ipsi in fossis specibus secura sub alta  
Olea agunt terra, coactaque robora totaque  
Advolvunt focis umos, ignique defere;  
Hic noctem ludo ducunt, et pocula læti  
Fermento acis acidia imitantur vite sorbis."  
*Georg.* iii. line 376, &c.

The ordinary food of the peasants consists of the flour of Indian corn, mixed into a dough with milk. For the first few days after Lent some indulge themselves in meat, but the greater part cannot afford this, and content themselves with eggs fried in butter. (*Wilkinson*, 157-8.) In their holidays they spend most of their time in the village wine-houses, where they amuse themselves with dancing, witnessing the vagaries of gipsies, &c. They are no longer *adscripti glebae*; and if dissatisfied with their masters, may, on giving due notice, quit their habitations and pass over to the estate of another, with their families and movables: this, however, is more an apparent than a real advantage, and, as already stated, the peasants are still in a very oppressed condition. The gipsies continue in a state of regular slavery, belonging either to the government or to private individuals. Their entire number in both principalities is estimated at 150,000, about 80,000 of whom belong to the government. Some are employed as domestic servants; the rest are suffered to stroll about the country, breeding cattle or horses, manufacturing wooden and iron utensils, or employing themselves as showmen, musicians, &c. For this liberty they bind themselves not to quit the country, and pay an annual tribute of 30 piastres per man, if belonging to the government; it is said that desertions by gipsies are rare.

The nobility and clergy are in general exempted from taxes for the service of the state, and from the demands of private creditors! They are in consequence overbearing, extravagant, and dissolute. Their education has hitherto been little superior to that of the common people; and though ostentations in their dress and equipage, their manners present little refinement. In Moldavia, which is the most civilized of these provinces, the great landed proprietors bestow considerable attention to the management of their estates; but in Wallachia these are mostly left to the care of agents. The boyars who hold no place under government, spend their leisure in absolute idleness, or in visiting each other, to kill time. "They have," says Thornton, "adopted indiscriminately the vices, without inheriting the vivacity of the Greeks." This statement applies, however, rather to their past than to their present state. Of late years some considerable improvements have been introduced; and though society be still very backward, it is, at all events, much superior to what it was under the Turkish regime.

*Government, &c.*—For a lengthened period these provinces were governed by *vaiodes*, or princes appointed by the Sultan from among the Greeks of Constantinople, and, during the continuance of this system, the country was a prey

## WALLINGFORD.

to every species of abuse. Since 1829, however, they have been placed under the sole protection of Russia; and whatever may be the defects of Russian policy, there can be no question that they have gained immensely by the change. The prince, or hospodar, both in Wallachia and Moldavia, is elected for life from among the boyars of the first rank, by an assembly composed of those boyars, and of deputies of the inferior boyars, the academic bodies, and merchants; but his election must be approved by Russia, and the investiture is then given by Turkey. A diet of the clergy and boyars (the class which contribute nothing to the state) meets to vote the supplies, and to discuss other propositions of the prince; but no organic changes can be made without the sanction of Russia. Wallachia is divided into 18, and Moldavia into 13 districts, each of which has a prefect governor, a receiver-general of taxes, a civil tribunal, consisting of a president and two other judges; and Moldavia has a director of police and a town council in each municipality. Judges are removable at the pleasure of the superior authorities. The legal codes are founded upon the civil law and the customs of the principalities; but though the system of jurisprudence has been much amended, many reforms remain to be effected, especially in the administration of the laws, which is said to be most corrupt. Nearly all the population belongs to the Greek church, and every village has a small church or chapel, with one or more priests, who act as curates. The ecclesiastics of this order are chosen from among the people, from whom they are little distinguished in appearance, and whose avocations they follow when not engaged in their clerical functions. The generality of them can neither read nor write, and merely recite the formula of their service from memory: they have, however, an unbounded influence over the ignorant population of these countries. There are many large and rich monasteries, and four or five seminaries for the education of the superior clergy.

*Public instruction*, though still backward, appears to have advanced since 1832. Colleges and Lancasterian schools are established in the principal towns; and the latter have by this time probably spread into the rural districts. According to the *Journal of Education*, the higher classes in these provinces have of late set about improving their national dialect with remarkable vigour; and it appears probable that their language will ultimately be rendered much nearer akin to the ancient Roman than even the Italian. There is a printing-press at Bucharest, which is in active employment; and translations of foreign as well as original works are continually being produced by native authors. (Vol. vii. p. 173.) This is a consequence, and by no means the only salutary one, that is likely to follow the establishment of the principalities under Russian protection, or at least their enfranchisement from the debasing rules of the Turks.

The *military force* is organized on the plan of the Russian army, and the staff officers are principally Russians. The militia is formed by the peasantry, in the proportion of two members for every 100 families; but along the banks of the Danube all the inhabitants capable of bearing arms are organized into a military force, auxiliary to the quarantine service. The total effective force of the provinces amounts to about 53,000 men, including nearly 5000 irregular cavalry. There is no artillery, nor are there any fortresses in either provinces.

The public revenues are derived from the capitation tax of 30 piastres (the piastre is about 3d. sterling) per head on the rural population; from 30 to 120 do. a year on the manufacturing classes, and 60 to 240 do. on merchants, &c.; from the government lands and rights of pasturage, fees, fines, customs, salt monopoly, and in Moldavia a tax on the incomes of the clergy. These sources produced in 1830, in Moldavia, 10,467,209 piastres, and in Wallachia, 16,293,299 do. In the latter province the expenditure nearly balanced this sum; but in the former there was a surplus of 2,797,890 piastres. Both provinces pay an annual but not very heavy tribute to the Porte. (*Colson, Etat présent de Moldavie, &c.*)

*History*.—Since the conquest of this country by Trajan, it has never ceased to be under foreign dominion. It was alternately in the power of the barbarians and the Greek emperors till the 13th century, when it appears to have been occupied by the Hungarians. Early in the 15th century it was conquered by the Turks, to whose empire it has since been generally tributary, but the last war between Turkey and Russia entirely destroyed the influence of the former, and rendered the latter paramount. (*Colson, Etat présent de Moldavie et de Valachie; Wilkinson's Wallachia and Moldavia; Thornton's Turkey; Boiss, La Turquie; Walsh; Paget, &c., passim.*)

WALLINGFORD, a par. and mun. bor., market town and par. of England, co. Berks., hund. Moreton, on the Thames, 12½ m. N.W. Reading. The old par. and mun. bor. were co-extensive with four small pars., having an area of 370 acres and a pop., in 1831, of 2545. But the

## WALSALL.

modern parl. bor. includes several additional pars., partly in Berks and partly in Oxfordshire, having an aggregate area of about 18,000 acres, and a pop., in 1841, of about 6000. The modern mun. bor. is about twice as extensive as formerly. The town 3 m. from the main road, between London and Oxford, is pretty well built, paved, and lighted with portable gas, and, for its size, contains a considerable number of neat private dwellings, and a few of a superior character. (*Bound Rep.*) The river is here crossed by a handsome stone bridge, 300 yds. in length, with 19 arches, and four draw bridges, built in 1809, upon the site of a former structure of the same description. St. Mary's church has a fine tower, crowied with pinnacles, which appears to have been erected in 1658: the living, a rectory, worth £148 a year, is in the gift of the crown. St. Peter's church, a handsome edifice, rebuilt about 50 years since, is surmounted by a spire: the living, a rectory in the gift of W. S. Blackstone, Esq., is worth £100 a year. The living of St. Leonard's, worth £103 a year, is in the gift of the crown. There are also places of worship for Friends, Independents, Wesleyans, and Baptists. The market-house and town-hall are respectable buildings. Among numerous charitable institutions are the free grammar school, founded in 1659, and several almshouses. No manufacture of any consequence is now carried on: the chief business is that of malting; and, in general terms, Wallingford "may be described as a neat country town, respectably inhabited, and a place of no other importance than as the market-town for the surrounding country." (*Bound Rep.*) It is a borough by prescription, its earliest existing charter being a copy of one dating from the reign of Henry I. It has returned two members to the House of Commons since the 23d of Edward I.; the right of voting, previously to the Reform Act, having been vested in 1 individuals paying church and poor rates. Registered electors, in 1839-40, 368, under the Municipal Reform Act; it is governed by a mayor, four aldermen, and 12 councillors, and other officers. It has a commission of the peace, court of record, court leet, and a jail for the confinement of offenders before committal.

WALSALL, a parl. and munic. bor. and par. of England, co. Stafford, hund. Offlow, on a small tributary of the Tame, in the centre of one of the principal coal and iron districts, 7 m. N.W. Birmingham. Area of par. 7920 acres, all of which is included in the parl. bor., except an outlying portion called Walsall Wood. Pop., in 1831, 15,066. It is situated on the declivity and summit of a low hill, and is pretty well built, having "the appearance of a compact and flourishing town: several houses of the value of from £20 to £40 a year are now building, and every indication of a thriving community is here exhibited." (*Municipal Bound. Report*, 1837.) The main streets are broad, well paved, lighted with gas, and well supplied with water; though there be but little that is prepossessing in their general appearance. In the environs, however, there are many handsome villas, with some picturesque scenery. Bloxwich, about 2 m. N. from the town, but included in the parl. bor., is a populous village, the inhabitants of which, like those of Walsall, are mostly occupied in the hardware manufactures. The parish church occupies a commanding situation on the top of the hill: it is an ancient, spacious, cruciform structure, with a tower surmounted by a lofty spire; and was thoroughly repaired in 1821. The living, a vicarage worth £398 a year, is in the gift of the earl of Bradford, lord of the manor. St. Paul's chapel, a handsome Grecian edifice, completed in 1825, is a perpetual curacy worth £50 a year. There are places of worship for Independents, Wesleyans, and Unitarians, and two Roman Catholic chapels, one of which is a handsome Greek building. The subscription library, established in 1800, has recently been enlarged: it contains reading and news rooms, and has a Doric colonnade, 30 ft. in height. The grammar school, founded and endowed by Queen Mary, in 1557, open to all the boys of the parish, has an annual income of £789; and subsidiary schools, dependant on the principal, have been established in different parts of the parish. It has also an English school in which 120 boys are instructed; a blue-coat charity; a national and several Sunday schools; and numerous charitable benefactions for the relief of the poor. In the time of Henry VI. an endowment was left for the annual distribution of 1d. to every person in the parish; but, in 1825, this useless endowment was judiciously appropriated to the erection and maintenance of 11 almshouses. Walsall is said to have been a borough by prescription: its earliest existing charter was granted by Henry VI. Under the Municipal Reform Act, it is divided into three wards, and is governed by a mayor, five other aldermen, and 18 councillors. The Reform Act conferred on it, for the first time, the important privilege of sending one member to the House of Commons. Registered electors, in 1839-40, 837.

It has a commission of the peace, a weekly court of petty sessions, and a court of record for the recovery of debts between 40s. and £20. The jails is of a very indifferent des-

## WALTHAM ABBEY.

crition. Its command of coal and iron has made Walsall a considerable seat of the hardware business; the manufacture of saddlers' ironmongery, that is, the making and plating of bridles, spurs, and stirrups, the mountings for coach and carriage harness, &c., being the staple employment of the town. It has, also, some brass and iron foundries, and a considerable trade in malt. A branch of the old Birmingham canal comes up to the W. end of the town, which is  $\frac{3}{4}$  m. from Willenhall station on the Grand Junction railway. The bank of Walsall and S. Staffordshire, established in 1835, has its principal office in this town. Walsall, though not mentioned in Domesday book, is known to be a town of considerable antiquity; but it is not connected with any historical event of importance. Market days Tuesdays, Fairs, 24th February, Whit Tuesday, and the Tuesday before Michaelmas; the two latter are mostly for cattle and cheese. (*Parl. Rep. and Priv. Inf.*)

WALTHAM (NORTH) a market town and par. of England, co. Norfolk, hund. Tunstead, on a level, about 6 m. from the sea, and 13 m. N.N.E. Norwich. Area of par., 4010 acres. Pop. of do., in 1831, 2615. The town consists of three streets which meet so as to form an irregular triangle. The parish church is a large venerable old edifice. Its tower fell down in 1724; but it has a fine south porch of flint and stone, and a font with a very rich wooden cover, of tabernacle work. The vicarage is annexed to the rectory of Antingham; the livings being together worth £336 a year: patron, the crown. Here are several dissenting chapels, a free grammar school, with an income of nearly £250 a year, at which Lord Nelson was partly educated; a Sunday school, with a small endowment, and several minor charities. The market-cross, originally erected in the reign of Edward III., was rebuilt in 1600. Two annual courts-baron are held here, and petty sessions for the hund. by the co. magistrates. Market-day, Tuesday. Fairs, three times a year, chiefly for cattle and the hiring of servants. In 1600, this town was visited by a most destructive fire, which consumed 118 houses, besides barns, stables, &c. On Walsam heath, near the town, is a stone cross, erected to commemorate a victory of Henry Spencer, bishop of Norwich, over a band of rebels, in 1382. (*Beauties of England and Wales*, vol. xi.; *Parl. Reports*, &c.)

WALTHAM ABBEY, or HOLY CROSS, a market town and par. of England, on the W. border of the co. of Essex, hund. Waltham, on the Lea,  $1\frac{1}{2}$  m. N.N.E. London. Area of par., 11,870 acres. Pop. of do., in 1841, 4500. The town originally founded in the time of Canute, consists chiefly of one spacious and irregular street. The church was formerly the nave of the church of an opulent and famous monastery, founded here by Harold II., of which there are now but few remains. This venerable relic, though much disfigured and mutilated, contains some most interesting specimens of the ornamented columns, semicircular arches, and other characteristics of the Norman style of architecture. It is about 90 ft. in length, by about 48 ft. in breadth. At the W. end is a heavy square embattled tower, 86 ft. in height; but this is comparatively modern, and bears the date of 1558. The inside of the church bears witness to the iconoclastic zeal of the Reformers, and to the bad taste and miserable parsimony of those by whom they have been followed; the ornamental parts having been defaced and whitewashed, and the brasses torn from the gravestones! Harold, and his two brothers slain with him at the battle of Hastings, were interred in this church. The living, a curacy worth £237 a year, is in the gift of the trustees of the earl of Norwich. The Baptist and Wesleyans have, also, places of worship. The educational and charitable institutions comprise a free school for 30 boys and 20 girls, with an endowment producing about £150 a year; another endowed school, for the education of five boys, and several bequests for the support of Sunday schools, almshouses, and the general relief of the poor. The revenues of the monastery amounted, at its dissolution in 1539, to £900 according to Dugdale, and to £1080 according to Speed. Market-day, Tuesday; fairs twice a year. At present, however, the town derives its entire importance from the gunpowder mills established here on account of government. These, which were originally acquired from private parties in 1787, consist (in 1842) of four mills each having two pair of stones. The moving power is water; the establishment is in all respects, in the most efficient state, and the powder produced of the very best quality. During peace the consumption of powder by government amounts to about 10,000 barrels a year, of which about 8000 are supplied by the works now under consideration. The latter, however, were not erected in the view of providing the entire supply of gunpowder, which, in periods of war sometimes exceeds 80,000 or 100,000 barrels a year; but partly as a check on the combinations of the manufacturers, and partly as affording the means of readily trying and fairly appreciating such new discoveries and experiments as may from time to time be made or suggested in the prepara-

## WALTHAMSTOW.

ation of so important an article, and in these respects they have been completely successful. At Enfield Lock, about 2 m. below Waltham, a manufactory of small arms is also carried on upon account of government. At present (1842) it is almost wholly occupied in the making of new percussion muskets, of which it supplies about 10,000 a year. (*Private Information.*)

In the hamlet of West Waltham, or Waltham cross, about 1 m. W. from Waltham Abbey, in Hertfordshire, is one of the stone crosses erected by Edward I., at the different places where the corpse of his beloved wife, Queen Eleanor, rested on its way from Hareby, near Grantham, where she died, to Westminster Abbey. Only three of these crosses now remain. It had originally been a very fine structure; but the ornaments are now much defaced. (*Beauties of England*, vols. vii. and x.; *Farmer's History of Waltham Abbey*; *Parl. Papers*, &c.)

WALTHAMSTOW, a village and par. of England, co. Essex, hundred Preectree, on the Lea, a tributary of the Thames, 5 m. N.E. London. Area of parish; 3690 acres. Pop. of do., in 1831, 4258. The village, on the borders of Epping Forest, is formed by the union of several hamlets; the houses, among which are many villas and country seats, being generally detached, and interspersed with trees and gardens. The church, built on an eminence, is a spacious structure in a mixed style of architecture, with a tower at its W. end; it was repaired and enlarged in 1817, and has several ancient monuments. The living is a vicarage, to which is attached the curacy of St. John's being worth, together, £772 a year: patron, W. Wilson, Esq. The Unitarians and Independents have each chapels; and to the latter a school is attached, in which 30 girls are educated, 20 of whom are clothed at the expense of the foundation. The free school, founded in 1542, has an endowment yielding £85 a year. Although established for the education of more than 30 pupils, it was lately attended by only five. It has also national and infant schools, with numerous well-endowed almshouses, and benefactions to a considerable amount, for the relief of the poor. Some copper-mills and other works are established in this parish, on the banks of the Lea. The parish has an exclusive local jurisdiction; and is governed by a council of 17 members, presided over by the vicar and churchwardens. Courts leet and baron are held here when required. (*Guide to London and its Environs*, &c.)

WALTON, county, Ga. Situated N. of the centre of the state, and contains 320 sq. m. Bounded N.E. by Appalachee r. Drained by branches of Ocmulgee r. It contained in 1840, 3599 neat cattle, 1579 sheep, 11,703 swine; and produced 18,658 bushels of wheat, 171,495 of Indian corn, 18,560 of oats, 2900 of potatoes, 627,750 pounds of cotton. It had eight stores, 12 grist-mills, 10 saw-mills, three tanneries, seven distilleries. Pop.; whites, 6583; slaves, 3625; free coloured, 1; total, 10,209. Capital, Monroe.

WALTON, county, Flor. Situated in the W. part of the ter., and contains 1584 sq. m. Bounded E. by Choctawhatchee river, S. by Choctawhatchee bay. Drained by branches of Yellow r., the principal of which is Shoal r. Aliqua river is navigable 15 m. from the bay. It contained in 1840, 10,952 neat cattle, 386 sheep, 3959 swine; and produced 25,048 bushels of Indian corn, 6902 of potatoes, 52,122 pounds of cotton. It had four stores, six grist-mills; seven schools, 131 scholars. Pop.; whites, 1189; slaves, 231; free coloured, 41; total, 1401. Capital, Euchee Anna.

WALTON, p. t., Delaware co., N. Y., 97 m. S.W. Albany, 321 W. Drained by the W. branch of Delaware r. and its tributaries. It contains two churches, a Presbyterian and an Episcopal, four stores, one fulling-mill, two grist-mills, 13 saw-mills; 17 schools, 603 scholars. Pop. 1846.

WALWORTH, county, Wis. Situated in the S.E. part of the ter., and contains 675 sq. m. Drained by Turtle river and its branches, and by branches of Fox r., one of which issues from Geneva lake in its S. part. It contained in 1840, 2861 neat cattle, 410 sheep, 6380 swine; and produced 59,560 bushels of wheat, 1499 of barley, 40,837 of Indian corn, 35,155 of oats, 42,455 of potatoes, 13,050 pounds of sugar. It had one store, three grist-mills, seven saw-mills, one distillery; four schools, 107 scholars. Pop. 2611. Capital, Delavan.

WALWORTH, p. t., Wayne co., N. Y., 18 m. N.W. Lyons, 205 W. Albany, 362 W. Drained by branches of Mud cr., and small streams flowing into lake Ontario. It contains a Baptist and Methodist church, three stores, two saw-mills, two tanneries; nine schools, 336 scholars. Pop. 1734.

WANDSWORTH, a large village and parish of England, co. Surrey, hund. Brixton; on the Wandale, near its confluence with the Thames, 5 m. S.W. London. Area of parish 1830 acres. Pop. of do., in 1831, 6879.

Wandsworth consists principally of one broad thoroughfare between two eminences called the E. and W. hills. "It is in parts noisy and bustling, in other parts rural and quiet; in parts clean and pleasant, in others low and dirty;

## WARDSBOROUGH.

and the residents are for the most part in the extremes of rich and poor." (*Guide to London and its Environs*.) The old church, which was mostly rebuilt in 1780, is a plain brick edifice with a heavy square tower at its W. extremity; the living, a valuable vicarage, worth £840 a year, is in the gift of W. Borodalle, Esq. The new church of St. Anne, erected by act of parliament in 1824, is an elegant edifice of Grecian architecture, with a handsome portico and a steeple of two circular arches; the living, a curacy worth £102 a year, is in the gift of the vicar of Wandsworth. Here also are meeting-houses for Friends, (to which two schools are attached), Baptists, Independents, and Wesleyans. The free endowed school, founded in 1710, has been incorporated with the national school, and affords instruction to above 200 boys and 100 girls, to some of whom clothing is supplied. It has also a Lancasterian school, in which more than 200 children are educated. A school of industry, attended by 40 girls, and various other charities, among which those of Alderman Smith, a native of the town, who died in 1627, are the most valuable. The manufactures of Wandsworth are more considerable than might have been expected; that of hats was introduced by the French refugees towards the end of the 17th century; and there are works for bolting cloth, printing calicoes and kerseymeres, making coach and livery lace, dyeing (especially in scarlet), with corn, oil, iron, and white lead mills, vinegar works, and distilleries. The Southampton railway passes a little to the E. of the village. Petty sessions for the hundred are held weekly, and there is a court of record for the recovery of debts under £5. Fairs on the first three days of Whitsun week, for horses, cattle, pigs, and toys. (*Beauties of England and Wales*, Surrey; *Guide to Env. of London*, &c.)

WANTAGE, a market town and parish of England, co. Bucks, hund. Wantage, on a small tributary of the Thames, at the E. extremity of the vale of the White Horse, 224 m. W.N.W. Reading. Area of parish, which includes the hamlets of Charlton and Grove, 7530 acres. Pop., in 1831, 3282. The town is irregularly built at the intersection of the high roads from Hungerford to Oxford, and from Faringdon to Wallingford, which form its principal streets. The church, a handsome cruciform structure, has a square embattled tower rising from its centre, and some fine monuments. The living, a vicarage, worth £503 a year, is in the gift of the dean and canons of Windsor. It has also places of worship for Independents and Wesleyans; a free grammar school, with an income of about £200 a year; some almshouses, founded in 1650, with an endowment of £100 a year, Sunday schools, &c. The town lands produce an income of about £450 a year, which is spent on the relief of the poor, the repair of highways, and the support of a school. Sacking, twine, and tarpaulins, are manufactured on a small scale. The market is celebrated for its fine corn, a great deal of the best seed-wheat being brought thither by the vale farmers. Its trade is facilitated by a branch of the Wilts and Berks canal, which comes up to the town. Wantage was made a borough after the conquest; but it no longer retains that distinction. A manorial court is, however, held in it once a year, and petty sessions for the hundred every Saturday.

WANTAGE L., Sussex county, N. J. Bounded E. by Wallkill r., along which is a swamp known by the name of the drowned lands. It has 11 stores, one fulling-mill, 10 grist-mills, eight saw-mills, two tanneries, five distilleries; one academy, 26 students, 22 schools, 573 scholars. Pop. 3908.

WARD, L., Randolph co., Ia. It has three stores, two grist-mills, two saw-mills; four schools, 110 scholars. Pop. 1138.

WARDEIN (GROSS or GREAT; Hungar, *Nagy-Varad*), a fortified town of Hungary, co. Bihar, of which it is the cap.; on the Körös, towards the borders of Transylvania, 39 m. S.W. Debreczin. Pop. estimated in the Austr. Nat. Encyc. at 10,000; but, according to Berghaus, it amounts, including its suburbs, to upwards of 16,000. It is the residence of a Roman Catholic and a united Greek bishop, a Greek protopapas, &c., and the seat of the county assembly, council, a commissariat department, &c. It has a royal academy, many other superior schools, an abbey, and various religious establishments, with manufactures of silk stuffs and earthenware. Mr. Puget says, "Gross Wardein is really one of the prettiest towns I have seen for a long time. Its wide well-built streets of one-storied houses, and extensive market-places, are quite to the taste of the Magyar, who loves not the narrow lanes, and high houses of his German neighbours. But the glory of Gross Wardein is in its gilded steeples, its episcopal palace, its convents, and its churches; and, although of the latter, the 70 which it formerly boasted are now reduced to 22, they are quite sufficient for the inhabitants." Prince Hohenlohe, of miracle-working memory, is now the occupant of this see. His elevation to the bishopric has, however, completely extinguished the light of miracle!" (*Paget's Hungary*, &c. li. 518.)

WARDSBOROUGH, p. t., Windham co., Vt., 15 m. N.W.

## WARE.

Brattleboro', 120 m. S. by W. Montpelier, 447 W. Drained by a branch of West r., which affords water-power. It contains two churches, a Congregational and Baptist, three stores, one fulling-mill, one cotton factory with 60 spindles, three grist-mills, six saw-mills, three tanneries; seven schools, 366 scholars. Pop. 1102.

WARE, a market town and parish of England, co. Herts, hund. Brighthelm, on the great N. road, and on the Lea, 18½ miles N. London. Area of parish, 4430 acres. Pop., in 1831, 4214. It consists chiefly of one thoroughfare, nearly a mile in length, and lined in general with substantial and well built houses. The church is a large cruciform structure, mostly in the decorated and perpendicular styles; it has an embattled tower at the W. end, and within are several fine monuments, and a handsome font. The living, a vicarage, annexed to that of Thunbridge, worth £333 a year, is in the patronage of Trinity college, Cambridge. Here are also chapels for Independents, Wesleyans, and Friends. The market-house, supported on arches, comprises a good assembly-room. The educational and charitable institutions include a free grammar-school, of very old foundation, attended by about 30 pupils; another free school, with a small endowment, established in 1834; a national, and two other schools, chiefly supported by subscription; numerous almshouses, a lying-in charity, and funds for distribution among the poor, yielding an income of £330 a year. (*Analytical Digest of Charity Reps.*) Ware has a considerable trade in corn, and malting is extensively carried on. It is governed by three constables and four head-boroughs; petty sessions for the division are held weekly, and a court baron once a year. Market-day, Tuesday. Fairs twice a year for horses and cattle.

Chadwell spring, near the town, assisted by a cut from the Lea, gives rise to the New river, an artificial stream brought from Hertfordshire, for the supply of water to the metropolis. Though the source of the New river, in a direct line, be not more than 20 m. from London, its course, including its windings, is nearly 40 m. This important work was completed in 1613, principally by the exertions of the famous Sir Hugh Middleton. Though very unproductive at first, it has since been a source of vast wealth to its proprietors, as well as of advantage to the city.

WARE, county, Ga. Situated in the S. towards the E. part of the state, and contains 3440 sq. m. Drained by Santilla and Suwannee rivers. Okefinoke swamp occupies its S.E. part. This great marshy lake is 280 miles in circumference, and extends into Florida. In wet seasons it appears like an inland sea, with several fertile islands. St. Mary's river rises in this swamp. The county contained in 1840, 20,918 neat cattle, 392 sheep, 12,269 swine; and produced 893 bushels of wheat, 26,746 of Indian corn, 18,658 of oats, 2900 of potatoes, 627,750 pounds of cotton, 11,935 of sugar. It had nine grist-mills; one college, 13 schools, 478 scholars. Pop.: whites, 2129; slaves, 132; free coloured, 2; total, 2323. Capital, Waresboro'.

WARE, p. t., Hampshire co., Mass., 22 m. E. by S. Northampton, 385 W. Bounded W. by Swift r. Watered by Ware r., which affords good water-power. Incorporated in 1761. The village in the E. part of the township, on Ware river at the falls, has become a large manufacturing place, with upwards of 1500 inhabitants. The township contains four churches, two Congregational, a Methodist, and a Baptist, a bank, six stores, one cotton factory with 350 spindles, two grist-mills, four saw-mills; 14 schools, 611 scholars. Pop. 1890.

WAREHAM, a parl. and munic. bor., market town, river-port, and par. of England, co. Dorset; hund. Winfrith, in Blandford div., on a peninsula between the rivers Frome and Piddle, about 1 m. above their confluence with Wareham harbour, the most westerly arm of Poole harbour, 30 m. S.S.W. Salisbury, and 102 m. S.W. London. The modern borough includes the whole of the three parishes, portions only of which were comprised in the ancient borough, together with those of Corfe Castle and Bere-Regis, and parts of two other adjacent parishes; having a total area of 22,890 acres, and a population, in 1831, of 5774.

The site of the town shelves gradually towards the S., and it is mostly surrounded by flat marshy land. Having been nearly destroyed by fire on the 25th July, 1762, it has been built on a regular plan, and consists chiefly of two wide streets, intersecting each other at right angles. The houses, built of brick, and tiled or slated, are generally in good condition. It is surrounded by a remarkable ancient mound, the space between which and the town is now laid out in market gardens. Each of its rivers is here crossed by a bridge, that over the Frome being a handsome structure, erected in 1779. Down to a late period it was neither watched nor lighted. (*Bound and Municipal Reports.*) Of eight churches which formerly existed here, only one, St. Mary's, is now used for public worship, though two more, Trinity and St. Martin's, are made use of for other purposes; the former being converted into a national school, and the

## WARMINSTER.

latter being merely used for reading the funeral service. St. Mary's, a spacious and ancient edifice, originally attached to a priory, is built in a mixed style, though principally of the decorated character. (*Rickman.*) It has a handsome tower, and contains some ancient monuments. All the livings of Wareham are now united in one rectory. Two more ancient churches that had fallen to decay, were taken down within the last century, and on the site of one of these the present town hall has been erected. The Independents, Wesleyans, and Unitarians have each places of worship. The educational and charitable institutions comprise a national school, held in the old church of the Holy Trinity; a small endowment for the education of 30 poor children; almshouses for six men and four women, and some minor charities.

The trade of Wareham consists chiefly in the export of the fine clay found in its neighbourhood to the Staffordshire and other potteries, and in shipping of vegetables from the market gardens round the town for Poole and Portsmouth. A good many of the inhabitants are also employed in knitting stockings, and in the manufacture of shirt buttons. The port, which was formerly considerable, is now nearly choked up, being only accessible to vessels of from 25 to 30 tons; but vessels of 60 tons ascend to within about 1 m. of the town, and those of 200 tons may anchor at Russell's quay, about 3 m. from the town. "The inhabitants may be said to consist of persons of middling circumstances, and a few retired officers and independent persons, retail tradesmen, and men deriving a subsistence from the small craft. There is no poverty in the place, but its population and the number of its houses are probably less now than formerly." (*Parl. Bound. Report.*) We doubt, however, whether there be any good foundation for this surmise. The borough returned two members to the House of Commons from the 13th of Edward I. down to the Reform Act, the right of voting being exercised, since 1747, by the inhabitants paying scot and lot; but under the act now referred to, it returns only one member along with Corfe-Castle, Bere-Regis, &c. Registered electors in 1839-40, 428. The borough has a commission of the peace, a court leet, held annually; and a court of record, opened monthly, but now of little utility. Market-day, Saturday. Fairs nine times a year, mostly for cattle, cheese, and hogs. (*Bound. Rep.; Munic. Corp. Append., &c.*)

WAREHAM, p. t., Plymouth co., Mass., 53 m. S.S.E. Boston, 446 W. Bounded S. by the head of Buzzard's bay. Watered by Agawon r., a fine-mill stream which flows into the head of the bay. It contains a Congregational church, a bank, eight stores, one cotton factory with 600 spindles, four grist-mills, three saw-mills, one paper-mill; five schools, 138 scholars. Pop. 2002.

WARMINSTER, a market town and parish of England, co. Wilts, hund. Warminster, on the Willey, at the W. extremity of Salisbury plain, 20 m. N.W. Salisbury, and 15 m. S.E. Bath. Area of parish, 5450 acres. Population of ditto, in 1831, 6106. The town consists chiefly of one spacious, clean, and well paved thoroughfare, nearly 1 m. in length, the houses being mostly of freestone. The church of St. Denis is a spacious structure, in the perpendicular style, with a square central tower; the living, a vicarage, worth £324 a year, is in the gift of the bishop of Salisbury. The new church, erected in 1830, partly by subscription, and partly by a grant from the parliamentary commissioners, is a perpetual curacy, worth £100 a year, in the gift of the vicar of Warminster. Besides a chapel of ease, there are several dissenting places of worship; a free-endowed grammar-school, affording instruction to 20 boys, with national and Lancastrian schools; supported by subscription. Warminster had formerly the most extensive trade in malt of any town in the W. of England: and this branch of industry, though it has declined, is still largely carried on. The manufacture of broad cloths and kersemeres has been, in a great measure, superseded by that of silk, in which many women and children are employed. The trade in corn is considerable; the market being one of the most extensive in this part of the country. The town is under the jurisdiction of a high constable, deputy constables, and tything-men, chosen at the annual manorial court. The quarter sessions for the county are held here in July; petty sessions monthly, by the county magistrates; and a court of requests for the recovery of debts under £5 is held alternately in this town and Westbury. Warminster is supposed to have been a Roman station, from the discovery of coins, weapons, a tessellated pavement, and other antiquities in the vicinity. Market-day, Saturday; fairs three times a year, for cattle, sheep, hogs, and cheese.

The manor and lordship of Warminster is the property of the marquis of Bath; and about 4½ m. W. from the town on the confines of Somersetshire, is Longleat house, the truly magnificent seat of that nobleman. The park in which it is situated is of great extent, and is finely laid out. (*Beauties of England and Wales, &c.*)

## WARNER.

WARNER, p.t., Merrimac co., N.H., 17 m. W.N.W. Concord, 481 W. Drained by Warner r. a tributary of Contocook r. Incorporated in 1774. It contains two churches, a Congregational and Baptist, five stores, three grist-mills, six saw-mills, one paper-mill, two tanneries; 23 schools, 561 scholars. Pop. 2139.

WARNER, county, N. Y., Situated in the E. towards the N. part of the state, and contains 912 sq. m. Drained by Hudson r. and Schroom branch, which here unite. Iron ore is abundant. It contained in 1840, 9826 neat cattle, 22,775 sheep, 8053 swine; and produced 12,961 bushels of wheat, 17,567 of rye, 63,476 of Indian corn, 24,647 of buckwheat, 103,733 of oats, 221,134 of potatoes, 43,821 pounds of sugar. It had 48 stores, seven fulling-mills, one woollen-factory, 14 grist-mills, 99 saw-mills, 24 saw-mills, nine tanneries; 104 schools; 4119 scholars. Pop. 13,422. Capital, Caldwell.

WARNER, county, N. J. Situated in the W. towards the N. part of the state, and contains 350 sq. m. Drained by Paulskill, Pequett, and Pohatcong rivers. Organized in 1824. Musconetcong or Schooley's mountain bounds it on the S.E. It contained in 1840, 12,718 neat cattle, 19,599 sheep, 22,517 swine; and produced 124,726 bushels of wheat, 184,877 of rye, 311,955 of Indian corn, 108,300 of buckwheat, 173,692 of oats, 142,062 of potatoes. It had 53 stores, one furnace, one cotton factory with 216 spindles, 21 flouring-mills, 35 grist-mills, 24 saw-mills, four oil-mills, nine tanneries, two distilleries, one brewery; 92 schools, 5533 scholars. Pop. 20,366. Capital, Belvidere.

WARNER, county, Pa. Situated in the N.W. part of the state, and contains 832 sq. m. Drained by Allegheny river and its tributaries, Conewango, Broken Straw, and other creeks. It contained in 1840, 8340 neat cattle, 13,081 sheep, 6334 swine; and produced 30,280 bushels of wheat, 6247 of rye, 37,223 of Indian corn, 13,570 of buckwheat, 64,890 of oats, 147,374 of potatoes, 91,318 pounds of sugar. It had 28 stores, five fulling mills, three furnaces, two flouring-mills, 16 grist-mills, 123 saw-mills, six tanneries, two printing-offices, two weekly newspapers; one academy, 50 students; 82 schools, 2074 scholars. Pop. 9278. Capital, Warren.

WARNER, county, Va. Situated in the N. part of the state, and contains 200 sq. m. Watered by Shenandoah r. It contained in 1840, 5424 neat cattle, 7289 sheep, 12,969 swine; and produced 148,372 bushels of wheat, 17,390 of rye, 219,320 of Indian corn, 4881 of buckwheat, 57,644 of oats, 16,325 of potatoes. It had 11 stores, one fulling-mill, 13 flouring-mills, 20 grist-mills, 12 saw-mills, three tanneries, eight distilleries; one academy, 14 students; six schools, 220 scholars. Pop.: whites, 3851; slaves, 1434; free coloured, 342; total, 5627. Capital, Front Royal.

WARNER, county, N.C. Situated in the N. part of the state and contains 391 sq. m. Drained by Roanoke r. and its tributaries, and Fishing creek and its branches. It contained in 1840, 11,100 neat cattle, 7860 sheep, 30,856 swine; and produced 25,851 bushels of wheat, 395,351 of Indian corn, 80,113 of oats, 24,730 of potatoes, 3,574,296 pounds of tobacco, 389,954 of cotton. It had 10 stores, four flouring-mills, 26 grist-mills, seven saw-mills, one printing-office, one weekly newspaper; three academies, 71 students; 10 schools, 182 scholars. Pop.: whites, 4390; slaves, 8200; free coloured 320; total, 12,919. Capital, Warrenton.

WARNER, county, Ga. Situated towards the E. part of the state, and contains 560 sq. m. Bounded S.W. by Ogeechee r., N. by Little r. The Georgia railroad passes through it. It contained in 1840, 6349 neat cattle, 4505 sheep, 17,254 swine; and produced 13,351 bushels of wheat, 268,320 of Indian corn, 6800 of oats, 5692 of potatoes, 262,555 pounds of cotton. It had 16 stores, two cotton factories with 1123 spindles, four flouring-mills, five grist-mills, six saw-mills; one academy, 75 students; 5 schools, 147 scholars. Pop.: whites, 5176; slaves, 4536; free coloured, 77; total, 9879. Capital, Warrenton.

WARNER, county, Miss. Situated in the W. part of the state, and contains 600 sq. m. Bounded W. by Mississippi r., S.E. by Big Black r. Watered by Yazoo r. The Vicksburg and Brandon railroad passes through it. It contained in 1840, 22,648 neat cattle, 3812 sheep, 25,890 swine; and produced 543,140 bushels of Indian corn, 32,119 of oats, 62,320 of potatoes, 16,049,290 pounds of cotton. It had 26 commission houses in foreign trade, 112 retail stores, 10 saw-mills; two academies, 184 students; seven schools, 176 scholars. Pop.: whites, 5223; slaves, 10,494; free coloured, 104; total, 15,820. Capital, Vicksburg.

WARNER, county, Tenn. Situated near the middle of the state, and contains 960 sq. m. Bounded N.E. by the Caney fork of Cumberland r. Drained by its tributary, Collins r. and its branches. It contained in 1840, 11,107 neat cattle, 9722 sheep, 10,441 swine; and produced 53,347 bushels of wheat, 3335 of rye, 468,085 of Indian corn, 108,117 of oats, 12,012 of potatoes, 4384 pounds of cotton. It had five stores, 10 grist-mills, four saw-mills, one powder-mill, five tanneries, six distilleries, one printing-office, one weekly newspaper;

## WARREN.

per; 28 schools, 1161 scholars. Pop.: whites, 9366; slaves, 1349; free coloured, 88; total, 10,803. Capital, McMinnville.

WARREN, county, Ky. Situated S.W. of the centre of the state, and contains 612 sq. m. Bounded N.W. by Green r. Drained by Big Barren r. and its branches. It contained in 1840, 34,523 neat cattle, 21,729 sheep, 52,329 swine; and produced 80,180 bushels of wheat, 1976 of rye, 715,566 of Indian corn, 183,210 of oats, 18,576 of potatoes, 1,029,890 pounds of tobacco. It had one commission house in foreign trade, 20 retail stores, seven grist-mills, three saw-mills, 12 tanneries, 23 distilleries, one printing-office, one weekly newspaper; one academy, 30 students; four schools, 125 scholars. Pop.: whites, 11,078; slaves, 4207; free coloured, 161; total, 15,446. Capital, Bowling Green.

WARREN, county, O. Situated toward the S.W. part of the state, and contains 400 sq. m. Bounded N.W. by great Miami r. Watered by little Miami r. and its branches. It has some remarkable ancient mounds; and contained in 1840, 21,368 neat cattle, 33,031 sheep, 56,847 swine; and produced 248,665 bushels of wheat, 7750 of rye, 1,231,321 of Indian corn, 327,314 of oats, 44,912 of potatoes, 187,295 pounds of sugar. It had 80 stores, four fulling-mills, three woollen factories, five flouring-mills, 22 grist-mills, 19 saw-mills, 20 paper-mills, 13 tanneries, one distillery, four potteries; 69 schools, 5536 scholars. Pop. 23,141. Capital, Lebanon.

WARREN, county, Ia. Situated in the W. part of the state, and contains 360 sq. m. Organized in 1828. Watered by Wabash r. and its branches. It contained in 1840, 7963 neat cattle, 9515 sheep, 15,851 swine; and produced 32,198 bushels of wheat, 1447 of rye, 414,046 of Indian corn, 89,955 of oats, 15,543 of potatoes, 8200 pounds of sugar. It had eight stores, one flouring-mill, four grist-mills, 19 saw-mills, six tanneries, one distillery; eight schools, 185 scholars. Pop. 5656. Capital, Williamsport.

WARREN, county, Ill. Situated in the W. towards the N. part of the state, and contains 900 sq. m. Formed in 1825, organized in 1830. Bounded W. by Mississippi river. Watered by Henderson r. and its branches, and by head branches of Spoon river. It contained in 1840, 9769 neat cattle, 7141 sheep, 23,682 swine; and produced 75,243 bushels of wheat, 4120 of rye, 233,843 of Indian corn, 1394 of barley, 97,400 of oats, 21,884 of potatoes, 22,619 of sugar. It had two commission houses in foreign trade, 10 retail stores, three flouring-mills, four grist-mills, 20 saw-mills, one tannery, one distillery; 19 schools, 569 scholars. Pop. 6739. Capital, Morrisouth.

WARREN, county, Mo. Situated towards the E. part of state, and contains 350 sq. m. Bounded S.W. by Missouri river. It contained in 1840, 4626 neat cattle, 3953 sheep, 10,950 swine; and produced 13,653 bushels of wheat, 132,345 of Indian corn, 21,185 of oats, 6526 of potatoes, 335,400 pounds of tobacco, 4562 of sugar. It had 27 stores, five grist-mills, six saw-mills, one oil-mill, one tannery, two distilleries; five schools, 104 scholars. Pop.: whites, 3555; slaves, 696; free coloured, 2; total, 4253. Capital, Warrenton.

WARREN, p. t., one of the capitals of Lincoln co., Me., 37 miles S.E. Augusta, 613 W. Incorporated in 1776. Watered by St. George r., which affords water-power, and is navigable for sloops 15 m. from the sea to Warren. It contains a courthouse, 14 stores, two grist-mills, five saw-mills, one academy, 80 students; 19 schools, 853 scholars. Pop. 2228.

WARREN, p. t., Worcester co., Mass., 66 m. W.S.W. Boston, 385 W. Incorporated by the name of Western, in 1741, received its present name in 1834. Chickapee river affords good water-power. It contains two churches, a Congregational and Universalist, six stores, two fulling-mills, one woollen factory, three cotton factories with 5500 spindles, one forge, three grist-mills, four saw-mills; 10 schools, 373 scholars. Pop. 1290.

WARREN, p. t., Bristol co., R.I., 14 m. S.E. Providence, 414 W. Bounded E. by Narragansett bay. The village is situated on the E. side of Warren r., 2 m. N. of the bay, and has an elevated and healthy site, 7 m. S.E. Providence in a direct line. It is well situated for navigation. There are engaged in the whaling business, 15 ships, four barges, and one brig, comprising 6023 tons, and in other branches of the foreign and coasting trade one ship, eight brigs, three schooners, and six sloops, with a tonnage of 2304, making the total tonnage of the port 8326. There are 14 wharves, with commodious store-houses, &c. It contains three churches, a Baptist, Methodist, and Episcopal, two banks, an academy, a female seminary, 11 private and four public schools, and about 200 dwellings. The Warren asylum for the poor has commodious buildings, and a farm of 75 acres under good cultivation. There are in the township seven commercial houses in foreign trade, 92 retail stores; four academies, 270 students; seven schools, 195 scholars. Pop. 2437. Rhode Island college was founded here in 1766, and removed to Providence in 1770.

WARREN, p. t., Herkimer co., N. Y., 64 m. N.W. Albany,

## WARREN.

**375 W.** It has seven stores, three fulling-mills, two woolen factories, three grist-mills, six saw-mills, two tanneries; 11 schools, 495 scholars. Pop. 2003.

**WARREN, T.** Somerset co., N. J., 6 m. N.E. Somerville. Watered by Middle Brook. It contains five stores, three grist-mills, three saw-mills, four distilleries; four schools, 85 scholars. Pop. 1601.

**WARREN, P. B.** capital of Warren co., Pa., 205 m. N.W. Harrisburg, 297 W. Situated on the N. side of Alleghany r., at the junction of Conewango cr. The streets cross each other at right angles, dividing the whole into 16 blocks, with 500 lots, one third of an acre each. Near the centre, at the intersection of two streets, 100 ft. wide, is a public ground containing four acres for public buildings. It contains a courthouse, jail, county offices, an academy, two churches, a Methodist and Presbyterian, a bank, 14 stores, one fulling-mill, one flouring-mill, two grist mills, four saw-mills, two printing-offices, two weekly newspapers; one academy, 50 students; three schools, 90 scholars. Pop. 737.

**WARREN, P. T.** capital of Trumbull co., O., 163 N.E. Columbus, 303 W. Situated on Mahoning r., on the Pennsylvania and Ohio canal. The village contains one mile square, with streets crossing each other at right angles, and has three churches, 16 stores, various mechanic shops, two printing offices, 200 dwellings, and about 1500 inhabitants. There are in the township 12 schools, 640 scholars. Pop. 1996.

**WARREN, L.** Belmont co., O. It has one academy, 14 students; four schools, 112 scholars. Pop. 2408.

**WARREN, T.** Jefferson co., O. It has five stores, four flouring-mills, one grist-mill, four saw-mills, one oil-mill; five schools, 250 scholars. Pop. 1945.

**WARREN, T.** Tuscarawas co., O. It has five stores, two grist-mills, four saw-mills, 10 schools, 402 scholars. Pop. 1173.

**WARREN, L.** Marion co., Ia. It has nine stores, one cotton factory with 500 spindles, one grist-mill, three-saw-mills, two tanneries, one brewery; two schools, 69 scholars. Pop. 1374.

**WARREN, L.** Putnam co., Ia. It has nine stores, one fulling-mill, one flouring-mill, five grist-mills, three saw-mills, two tanneries, one distillery, one pottery; six schools, 486 scholars. Pop. 2201.

**WARRENSBURG, P. T.** Warren co., N. Y., 6 m. N.W. Caldwell, 69 m. N. Albany, 444 W. Hudson river here uniting with Schroon branch. It contains two churches, a Methodist and Presbyterian, five stores, one fulling-mill, one grist-mill, nine saw-mills, two tanneries; 10 schools, 405 scholars. Pop. 1468.

**WARRICK, county, Ia.** Situated in the S.W. part of the state, and contains 360 sq. m. Bounded S. by Ohio river. Drained by Big and Little Pigeon creeks. It had in 1840, 5400 neat cattle, 5400 sheep, 1820 swine; and produced 20,500 bushels of wheat, 250,800 of Indian corn, 32,500 of oats, 20,000 of potatoes, 516,000 pounds of tobacco. It had 20 stores, two flouring-mills, 10 grist-mills, five saw-mills, six tanneries, six distilleries; 22 schools, 710 scholars. Pop. 6321. Capital, Booneville.

**WARRINGTON, a parl. bor., market-town, and parish of England;** county Lancaster, hund. W. Derby; in a low situation on the Mersey, here crossed by a stone bridge, 17 m. E. by S. Liverpool. Area of parish, 12,260 acres. Pop., in 1831, 19,155, in 1841, 21,857. The parliamentary borough, however, comprises only the townships of Warrington and Lachford, with portions of that of Thelwall, and may have at present (1842) a population of about 20,000. The town principally consists of four main streets, one or two of which are spacious and contain some handsome buildings; but the other streets are for the most part narrow and badly drained, and very little appears to have been done for the improvement of the town, except its being paved and lighted with gas in 1821! (*Down. Rep.*, &c.)

The most important public buildings are the sessions-house erected in 1820; the market-hall over which are the assembly rooms; three cloth halls, theatre, &c. The parish church, which is of Saxon origin, and existed at the time of the conquest, is a large massive cruciform structure. The tower, which rises from the intersections of the transepts, was rebuilt in 1696; the interior of the church, which is lofty and handsome, contains two chapels, and some fine ancient monuments. Beneath the chancel has lately been discovered an ancient crypt, now converted into a vestry. At the entrance of the churchyard are two handsome gates. The living, a rectory, has under it the perpetual curacies of St. Paul and the Holy Trinity. There are two Roman Catholic chapels, founded severally in 1823 and 1836, and 10 other places of worship for different sects. The free grammar school, founded by Sir T. Boteler in 1526, has an annual income of between £700 and £800; but at present (1842) it is attended by only about 25 day scholars and 12 boarders. The blue-coat school, established in 1677, has since received legacies and benefactions amounting to up-

## WARSAW.

wards of £2000, and has now an annual income of £450; 30 boys and 20 girls; children of settled inhabitants of the town, are lodged, maintained, and clothed in the building, and 170 boys and 40 girls admitted as day scholars. A general subscription library was established in 1758. A society was formed here early in the last century for the purpose of affording assistance to widows and orphans of clergymen in the archdeaconry of Chester; and the relief dispensed by it amounts at present to about £1000 a year. A handsome building, in the Elizabethan style of architecture, is in progress for the education of the orphan daughters of clergymen. A dispensary and branch of the royal humane society are among the other numerous charities, and there is a small but commodious infirmary, to which two wards for cases of fever are attached.

The appearance of Warrington is far less bustling and animated than formerly. Until the opening of the railway it was the great thoroughfare between Manchester and Liverpool; 70 public carriages daily passing through it between these great emporiums, whereas at present (1842) there is not one! Its traffic with the above towns is, however, very considerable; for though not strictly speaking a port, it possesses, by means of the Mersey and Irwell navigation, many of the advantages of a port. At spring-tides the Mersey rises from 10 to 12 ft. at Warrington bridge, and vessels of from 70 to 100 tons burden navigate the river up to this point. The Warrington and Newton railway, a branch of that between Manchester and Liverpool,  $\frac{1}{2}$  m. in length, was completed in 1831, at a cost of £65,000. It now forms a portion of the Grand Junction line.

Warrington is distinguished by the number and variety of its manufactures. The making of sailcloth and sacking was formerly carried on here upon a very large scale, but it is dwindled to insignificance. At present, among the many that are carried on, cotton spinning and power loom weaving occupy a prominent place. In 1833, there were six cotton-mills at work in the parish, employing in all 1136 hands. (*Rep. on Mills and Factories.*) The refining of sugar, though not entirely relinquished, is not a leading branch of industry; but the soap manufacture continues to be of considerable importance, 205,011 lbs. of soft soap having been made in the town in 1839. The manufacture of flint and plate glass is carried on upon a large scale, and has long ranked among the principal businesses of the town. Warrington is also the principal seat of the manufacture of "Lancashire tools," under which designation are comprised files of the very best quality, chisels, graver's tools, watch and clock maker's tools, &c., and in some of its factories may be seen collections of the articles in question of unrivalled excellence. Pin-making is also carried on; and Warrington has long been celebrated for its matt and ale. The soil, too, in the neighbourhood being especially suitable for horticultural purposes, gardening is here well understood and successfully practised. The government of the town is vested in police commissioners and constables chosen annually in October at the court leet of the lord of the manor, acting under the superintendence of the magistrates of the hundred. Petty sessions are held every fortnight. The Reform Act conferred on Warrington, for the first time, the privilege of sending one member to the House of Commons. Registered electors, in 1839-1840, 633. Market days, Wednesday and Saturday. Fairs, 18th July and 30th November, each lasting 10 days, for horses, cattle, and cloth, and every other Wednesday for cattle. (*Baines's Hist. of Lancaster; Parl. Papers; Priv. Inform.*)

**WARSAW, P. V.** capital of Fauquier county, Va., 102 m. N. by W. Richmond, 51 W. It contains a courthouse, jail, a town-hall, three churches, an Episcopal, a Methodist and Presbyterian, several stores, a printing-office, issuing a weekly newspaper, 200 dwellings and about 1300 inhabitants.

**WARSAW (Pol. Warsawa, Fr. Varsovie),** the capital city of Poland, palat. Masovia, on the Vistula, 650 m. S.E. Petersburg, lat.  $52^{\circ} 14' 28''$  N., long.  $21^{\circ} 24' 47''$  E. Pop., in 1839, including its suburbs, covers a great extent of ground, is on the left or W. bank of the river, which is here about as broad as the Thames at Westminster bridge, being connected with the suburb of Praga on the right, by a bridge of boats. A suspension bridge was some years since projected instead of the latter, but the project has not hitherto been carried into effect.

Warsaw, being situated partly in a plain and partly on an ascent gradually rising to the river's bank, has a magnificent appearance from the Petersburg road. But though the contrary has been affirmed by some travellers, the impression of grandeur is not supported on entering the town. It has, indeed, many fine palaces, public buildings, and noble mansions, and, latterly, its private houses have been improved, by prohibiting the construction of new buildings of wood. But its streets, though spacious, are badly paved, badly lighted, and dirty; the greater part of the houses in

## WARSAW.

the city, and sth. more in the suburbs, are mean and ill constructed, above one fourth part of their number being at this moment of wood; and the whole town exhibits a painful contrast of wealth and poverty, civilization and barbarism, luxury and misery. The suburb of Praga, on the E. bank of the river, once strongly fortified and extensive, is now all but deserted. There are still, however, several other suburbs of large extent; and those adjacent to the city proper are included within its rampart and ditch.

The principal public building is the *Zamek*, a huge edifice, formerly the palace of the kings of Poland, and that in which the emperor still resides when he visits Warsaw. The hall of the Polish diet, a splendid gilt ball-room, and the national archives of Poland, are in this building; but the fine paintings of Canaletti, Bacciarelli, &c., with the library and other treasures, have been removed since 1831 to the Russian capital. There are several other royal palaces. That called the palace of Casimir, which was appropriated to the university, has in its square a statue of Copernicus. The Palais de Saxe is a large building in one of the finest squares. "At the back of this palace are the principal public gardens in the interior of Warsaw, which resemble in some respects the park at Brussels, though considerably larger. Another handsome public garden, much frequented at the fashionable hour of 12, belongs to what is called the government palace. This latter is, perhaps, one of the most chaste and really beautiful architectural elevations in the Polish capital. It is strictly in the Italian style, and contains the national theatre, custom-house, high tribunals, and offices of the minister of the interior. The palace of the minister of finance, which is quite modern, forms, with the new exchange, a very imposing object at the end of the street leading to the Breslau gate. The Marieville bazaar is a large square, the four sides of which consist of covered arcades, with dwellings for the merchants above, and shops for the merchandise under them; the latter amount to about 300, besides several warehouses. A great number of churches are to be found in the city; some of which are of really colossal dimensions, as the cathedral of St. John, and the church of the Holy Cross. In the former are an altarpiece of great merit by Palma Nova, and a large standard wrested from the Turks by Sobieski at the siege of Vienna. The Lutherans have also a magnificent church, erected at an expense of £25,000, and superior in beauty and boldness of design to all the Catholic churches in the place, having a dome and tower of prodigious elevation. Which way soever a traveller turns, he cannot fail to pass some one of the monuments which stand in the squares to commemorate the reign of a sovereign, or the achievements of a Polish warrior. The colossal statue of Sigismund III., cast in bronze, gilt, and placed on a lofty pillar of marble of the country, produces a very good effect; and the equestrian group in bronze of Poniatowski, &c., by Thorvaldsen, is another monument worthy of admiration.

"Independently of the public gardens, Warsaw may be said to have in its vicinity some of the finest drives and promenades in Europe for width and extent. The numerous avenues of the Ujasdow, planted with lofty lime and chestnut trees, are the rendezvous of nearly the entire population of Warsaw on Sundays and other holidays, and are admirably calculated for horse and sledge races, both of which take place here. In the immediate vicinity is the royal villa, formerly the country residence of Stanislaus Augustus. The palace is built in the Italian style: Bacciarelli's paintings decorate one of the principal rooms; and it has a ball-room, ornamented with colossal statues in white marble; a chapel, with some curious works in mosaic, &c. In the park is a stone bridge, on which is erected the equestrian statue of John Sobieski. The view of the Vistula from the park is very fine; and a large island lying in the middle stream is much frequented in summer by the amateurs of aquatic expeditions." (*Granville*, ii., 541-547.)

Among the other public buildings, may be specified the Radzivil and Krasinski palaces, the barracks, mint, six hospitals, five theatres, and several good inns. Since the late insurrection, a strong citadel has been erected partly in the view of protecting, but more of overawing the town. This citadel was built from the produce of a loan raised in Poland; and, in 1835, when the emperor Nicholas visited Warsaw in his way from the congress at Wlitz, he distinctly informed the civic authorities that on the first disturbance breaking out in the city, the guns of the citadel should level it with the ground! A cast-iron obelisk has been erected in the citadel in honour of the late emperor, inscribed "To Alexander, the conqueror and benefactor of Poland!"

The university of Warsaw, established in 1816, had faculties of theology, jurisprudence, medicine, philosophy, belles-lettres, and fine arts, and a library containing, it is said, 150,000 volumes of printed books, exclusive of rare MSS., with an observatory and botanic garden, cabinets of

## WARWICK.

natural philosophy, zoology, mineral, models, and coins, and printing and lithographic presses. Unfortunately, however, the university no longer exists, having been suppressed subsequently to the late ill-fated insurrection, its fine library being then also, removed to Petersburg. Of late years there has been a Roman Catholic college at Warsaw, with twelve professors; but the adherents of the Russo-Greek church are rapidly increasing here, as in all other countries subject to Russia, and have now a cathedral and other churches in the city. The Jews, of whom there are about 25,000, have several synagogues; the Armenians, too, have their places of worship, and the English have a chapel. Among the educational establishments, are numerous superior, special, and elementary schools; all of them being modelled on the new system, and having attached to each a native Russian, as a teacher of his own language, a considerable proficiency in which is now an indispensable qualification for holding any public office, how trifling soever.

Warsaw has also, a deaf and dumb asylum, a musical conservatory, societies of friends of literature and natural science, a bible society, &c., and some newspapers and other periodical publications. These, however, are subjected to a rigorous censorship, and are, consequently, worth little or nothing. Its manufactures comprise woolen and linen cloths, saddlery, leather, carriages of different kinds, ironmongery, paper, and tobacco, with chemical and cotton printing works, and numerous breweries. Warsaw is the great commercial entrepôt for Poland; and has two large annual fairs, in May and September, attended by traders from many parts of Europe and Asia, five banks, an assurance society, &c.

In comparing this city with Petersburg, Dr. Granville says, "There is a notable difference between the general aspect of the inhabitants of Warsaw and those of the capital he had just left. The women here are handsomer than the men; at Petersburg the impression I received was of an opposite nature. The absence of those semi-Asiatic costumes, which are so prevalent in all the streets of the Russian capital, tends, in a great measure, to give to the capital of Poland a more European aspect; but there is something else that contributes to produce that effect. The Poles are uniformly merry; they are loud chatters, fond of amusement, and as partial to living in the open air, doing nothing, as the Parisian *faineants* and the *habitués* of the Palais Royal, the Tuileries, the Boulevards, or the Luxembourg; to which class of people I should be tempted to compare them in many respects. They also do business differently: their shops and public places of amusement are more like those of any other European city farther S.; and their *ménage* appears to be much nearer to that of the French than of the Russians." (*Granville*, ii., 527, 528.)

Warsaw, though a very ancient town, was not the capital of Poland till 1566, after the union with Lithuania; when the Polish diet was transferred to it from Cracow. The city was occupied by the Swedes in the middle of the 17th century, and surrendered, without opposition, to Charles XII. in 1703. In 1793, the inhabitants expelled the Russian garrison previously in occupation; and the town was successfully defended against the Prussians, in the succeeding year, by Kosciusko. But the suburb of Praga, being soon after taken and sacked by the Russians under Suwarow, by whom a large portion of the inhabitants were put to the sword, the city, threatened with a similar fate, submitted to the conquerors. In 1795, Warsaw was assigned to Prussia; in 1806, she was made the capital of the grand duchy of Poland; and in 1815, she became the capital of the new kingdom of Poland. She was the principal seat of the ill-fated insurrection of 1831, which has entailed so much mischief on her and the rest of Poland. (*Maitland*, *Tableau de Pologne*; *Diet. Géog.*; *Granville*, &c.)

WARSAW, p. 1., capital of Wyoming co., N. Y., 251 m. W. Albany, 363 W. Watered by Allen's creek. It contains a courthouse, jail, county clerk's office, four churches, two Presbyterians, a Methodist and Baptist, nine stores, three fulling-mills, one woollen factory, one furnace, two grist-mills, four saw-mills, two tanneries, two academies, 80 students; 25 schools, 1063 scholars. Pop. 2841.

WARSAW, p. v. Hancock county, Ill., 114 m. W. N. W. Springfield, 392 W. Situated on the E. side of Mississippi river, at the foot of Des Moines rapids. It contains several stores, a steam-mill and about 800 inhabitants. It is near the site of old fort Edwards.

WARRIOR MARK, p. 1., Huntingdon co., Pa., 108 m. W. Harrisburg, 171 W. It contains three stores, one furnace, two grist-mills, five saw-mills, two tanneries, two distilleries; nine schools, 500 scholars. Pop. 1689.

WARWICK, a co. of England, situated nearly in the centre of the kind, having N.E. the co. of Leicester, E. Northampton, S. Oxford and Gloucester, W. Worcester, and N.W. Stafford. It contains 574,080 acres; of which above 500,000 are arable, meadow, and pasture. The northern and largest

## WARWICK.

part of Warwickshire was formerly an extensive forest, and still retains something of its former character, being interspersed with heaths and moors, and sprinkled with woods; but the former have greatly diminished within the present century. The S. portion is in general very fertile. Both the dairy and grazing systems are successfully practised, but the former has been gaining on the latter. The long-horned breed of cattle is preferred for the dairies; the average produce of a cow being about 2½ cwt. of cheese. Short-wooled sheep have been almost entirely banished from this county. The standing sheep stock is supposed to amount to about 350,000 head, and the produce of wool to be between 8000 and 9000 packs. Arable husbandry is not so well understood as grazing; and in some districts it is far behind. Wheat, barley, oats, and beans, are extensively cultivated. The first is generally drilled; and when such is the case, it is not a little singular that turnips should be almost everywhere sown broadcast, and beans generally dibbled. The system of top-dressing is more commonly followed in this than in any other county. Estates of various sizes; some very large, and others small. Farms vary from 80 to 500 acres; but the smaller class predominate so much, that the average is not supposed to exceed 150 acres. Old enclosures average about 10 acres, new about 15. Leases getting more uncommon, and farms mostly held from year to year. Tenants bound not to exceed three crops to a fallow; but there is no restriction as to the quantity of wheat sown. Average rent of land in 1810, £1 2s. 5½d. an acre. Little can be said in favour of the farm buildings. The old houses and offices were sometimes built of timber; sometimes the walls were of stone, and sometimes of mud or clay, or thatched; they are in general injudiciously placed, ill-planned, and inconvenient. The new farm-houses and offices are of brick, covered with tile, and are very substantial; but convenience is said not to be much studied. There are no open sheds for wintering cattle, nor feeding-sheds for soiling with turnips, and other green food. (*Survey*, p. 30.) Coal is wrought to a considerable extent at various places; but Birmingham is supplied with coal brought by canal from Staffordshire. Warwick ranks high as a manufacturing county. Birmingham is the principal seat of the hardware manufacture; and nowhere, perhaps, has the combined influence of ingenuity, skill, and capital been more astonishingly displayed than in the immense variety, beauty, utility, and cheapness of the articles produced in this great workshop. Coventry has been long distinguished for its proficiency in the silk trade, particularly in the manufacture of ribands. Needles and fish-hooks are made at Alcester; hats at Atherstone; and flax-mills have been erected at Tamworth, and in other places. Principal rivers Avon, Tame, Aine, and Leam. The Birmingham and Fazely canal runs along the N.W. side of the county; and it is intersected by the Warwick and Birmingham canal, the Warwick and Napton canal, the Oxford canal, &c.; the county is also intersected by the railway from London to Birmingham, and thence to Manchester. It is divided into four hundreds, and four subsidiary districts, and contains 205 parishes. It sends 10 members to the House of Commons; viz. four for the county, and two each for the city of Coventry and boroughs of Birmingham and Warwick. Registered electors for the county, in 1839-40, 11,039, whereof 6786 belong to the E., and 4253 to the W. division. In 1841 Warwick had 81,445 inhabited houses, 402,124 inhabitants, of whom 195,967 were males, and 206,154 females. Sum expended for the relief of the poor in 1838-39, £108,711. Total annual value of real property assessed to the poor rates, in 1841, £1,609,747.

WARWICK, a parl. and mun. bor. and par. of England, near the centre of the co. Warwick, of which it is the cap. hund. Knightlow, on the Avon, 2½ m. W. Leamington, and 82 m. N.W. London. Area of parl. bor., the limits of which were not altered by the Boundary Act, and which is co-extensive with the two parishes of St. Mary and St. Nicholas, 5360 acres. Pop., in 1831, 9109. It stands on an abrupt acclivity on the N. bank of the river, which is here crossed by a handsome stone bridge of a single arch; and is regularly laid out, consisting of two principal thoroughfares crossing each other towards the centre of the town, with a number of smaller cross streets. The principal streets are well built, paved, lighted with gas, kept remarkably clean, and ornamented with several handsome public buildings. The most conspicuous of these is St. Mary's church, which, having been nearly burnt down in 1694, was rebuilt in 1704. It exhibits a singular union of various styles: the square tower, which was designed by Sir Christopher Wren, and is finely proportioned, rises to a height of 130 ft.; it is supported on four pointed arches, with a thoroughfare underneath, and crowned with pinnacles. Rickman says, that "The whole of this church, except the chancel and its adjuncts, is a composition of the greatest barbarity, but the chancel is an uncommonly beautiful specimen of

perpendicular work, and the east front is remarkably fine, simple in its arrangement, yet rich from the elegance of its parts and the excellent execution of its details. The interior is equally beautiful, and there are, on the N. side, a monumental chapel and vestry of very good character; but the great feature of the church is the Beauchamp chapel erected in 1464. It is completely enriched both within and without; its details of the most elegant character and excellent execution, and in very good preservation. It consists of a chapel, of several arches and a small aisle, or rather passage, on the N. side, between the chapel and the church. In the centre of the chapel stands a very rich altar tomb, with the effigies of Richard Beauchamp, earl of Warwick, whose executors commenced the erection of this chapel, which, however, was not completed until the 3d Edw. IV. There are some other monuments, (including a fine one of Dudley, earl of Leicester, favourite of Elizabeth), but others are of much later date, and rather disfigure the chapel than add to its beauty." The living of St. Mary's is a vicarage, in the gift of the corporation of Warwick, worth £300 a year. The church of St. Nicholas is small and plain; the living, also in the gift of the corporation, is worth £218 per annum. Other churches formerly existed, of which there are now no remains. The Independents, Friends, Wesleyans, Unitarians, and Baptists, have their respective meeting-houses.

The courthouse in the High-street is a respectable stone building erected in 1730. The county hall, a spacious and handsome edifice 94 ft. in length, and 36 ft. in width, has an elegant stone front supported by a range of Corinthian pillars. In this building the courts of justice are held; and attached to it on the N. side is the county jail, a large and well designed building, surrounded by a strong wall 23 ft. in height, enclosing nearly an acre of ground. The county bridewell in which is a corn-mill, (worked by the male prisoners,) &c., and the market-house are large and substantial modern structures. It has also a public subscription library and news-room, and a small theatre.

But the great glory of Warwick is its castle, the seat of the earl of Warwick, and the most magnificent of the ancient feudal mansions of the English nobility; still used as a residence. It stands on a rock overhanging the Avon, a little to the S.E. of the town. It retains much of its ancient grandeur of appearance, and, uninjured by time, presents an interesting memorial of by-gone ages. Its foundation is attributed to Ethelfleda, daughter of Alfred, in 915; but no authentic trace now remains of the original building. Cesar's tower, 147 ft. in height, supposed to have been built at least 700 years ago, is in a perfect state of preservation. Guy's tower, 128 ft. in height, and built in 1394, is, also, nearly perfect; it appears to be of a Decorated character; and though very plain, is perhaps the most perfect remain of its kind in existence, and curious alike as to composition and construction. The principal entrance faces the E. side of the town, and the approach to it is a broad winding road cut in the solid rock. Before the front is a disused moat, a stone arch over which has replaced the ancient drawbridge. On passing the double gateway, the visitor finds himself in the inner court of the castle, surrounded on all sides by lofty embattled walls and ramparts. This castle was formerly a strong fortress; and by means of open flights of stone steps and passages on the tops of the walls there is a line of communication all round the building. The parts of this vast and venerable pile that are occupied by the family are magnificently fitted up, but so as to harmonize in all respects, with the style and character of the building. The collection of paintings is at once extensive and valuable.

In a greenhouse attached to the castle is the WARWICK VASE, one of the noblest remains of ancient art. It is of white marble, and of large dimensions, being capable of holding 136 gallons. Its handles are exquisitely formed of interwoven vine branches. On the body of the vase are the heads of satyrs, bound with wreaths of ivy, the skin of the panther, with the head and claws beautifully sculptured, and other appropriate ornaments. This most splendid relic was found at the bottom of a lake, at Adrian's Villa, at Tivoli (which see), of which, no doubt, it had formed a principal ornament; and having been purchased by Sir William Hamilton, was consigned by him to his relative the earl of Warwick, at whose expense it was brought to England, and by whose liberality it has been placed in a situation where it may at all times be seen by the public.

The remains of several monastic establishments exist in and near Warwick; and at the E. and W. extremities of the town are gates, each containing some ancient work with modern additions. Leicester's hospital, an ancient building, at the W. extremity of High-street, was originally a hall belonging to two guilds, and was converted to its present use by Robert Dudley, earl of Leicester, for the reception of 12 poor men, chiefly disabled veterans, and for a professor of divinity as master. In 1811, the clear value of the estates

## WARWICK.

with which it is endowed amounted to £2000 per annum. In 1813, the master's salary was raised from £50 to £400 a year, and the number of inmates increased to 22. The college school, originally founded by Henry VIII. as a free grammar school, and endowed out of the revenues of the dissolved monasteries, is open to all the boys of the town. It has two exhibitions of £70 to each of the universities. Of late years it has fallen into a state of decay; but recently the number of youths educated here has increased, and at present (1842) the school is comparatively prosperous. Here is, also, a charity school founded and endowed for the instruction of 39 boys and 36 girls; a national school; school of industry, &c., and not less than 40 almshouses. Large funds are vested in the hands of the corporation for distribution among the poor.

The manufactures, which are unimportant, comprise a few descriptions of cotton and woollen goods, a worsted mill, with a ropery, and a brass and iron foundry. There are several large malting houses, and lime, timber, and coal-wharves, on the banks of the Stratford canal, which comes up to the N. part of the town, and by which it communicates with Oxford, Birmingham, and the Severn. It is within about 10 m. of Coventry, and consequently, also, of the London and Birmingham railway. The *Bound. Rep.* says, "The town is thriving, and distinguished by an appearance of respectability and neatness. Trade seems to be rapidly increasing, which may be accounted for in great measure by its proximity to and connexion with Leamington, where most of the Warwick tradespeople have shops, and where the chief speculators from this town invest their capital." But circumstances have changed materially in the interval. The great increase of Leamington, and its superior advantages, have taken much of the capital and business from Warwick, which it formerly enjoyed, and proportionally depressed the latter. Very few Warwick tradesmen have also shops in Leamington. Warwick is a borough by prescription: its earliest charter dates from the 45th of Henry III., but it was not regularly incorporated till 1553. Under the Municipal Reform Act, it is divided into two wards, and is governed by a mayor, five aldermen, and 18 councillors. Quarterly courts of session are held for all offences not capital; a court-leet annually; and there is occasionally a court of record for the recovery of debts under £40. The borough has returned two members to the House of Commons since the reign of Edward I., the franchise having been vested, previously to the Reform Act, in the payers of church and poor-rates. Registered electors, in 1839-40, 977. Corporation revenue, in 1840, £1053. It has a weekly newspaper; and the Warwick and Leamington Banking company, established in 1834, has its head office in the town. The Leamington Priory Banking company has also a branch here.

Warwick is conjectured by Dugdale and other writers to have been a Roman station; but there are no proofs of its having existed before the Saxon times. It was in great part destroyed by fire in 1694. Market-day, Saturday. Fairs, twelve times a year; mostly for horses, cattle, and cheese. (*Hist. of Warwick; Bound. and Munic. Corp. Rep.; Cooke's Warwick Castle; Private Inform.*)

WARWICK, county, Va. Situated in the S.E. part of the state, and contains 95 sq. m. Bounded S.W. by James river. It occupies the S.W. part of the peninsula between James and York rivers. It contained in 1840, 1573 neat cattle, 973 sheep, 3926 swine; and produced 10,901 bushels of wheat, 45,975 of Indian corn, 8698 of oats, 1705 of potatoes. It had 25 stores, one cotton factory with 1664 spindles, two flouring-mills, 11 grist-mills, six saw-mills; two schools, 52 scholars. Pop.: whites, 604; slaves, 831; free coloured, 21; total, 1456. Capital, Warwick C.H.

WARWICK, p. t., Franklin co., Mass., 79 m. W.N.W. Boston, 420 W. Drained by a small branch of Miller's river. Incorporated in 1763. It contains two churches, a Congregational and Unitarian; two stores, one fulling-mill, two grist-mills, 12 saw-mills, three tanneries; one academy, 42 students; 11 schools, 371 scholars. Pop. 1071.

WARWICK, p. t., Kent co., R. I., 11 m. S.W. Providence, 401 W. Watered by Pawtuxet river, which affords extensive water-power. The village of Apponaug in its S. part is on a branch of Narragansett bay, and has a good harbour, about 1 m. from it, for vessels of any size, and those of from 20 to 50 tons come up to the village. A mile from the village is "Drum Rock," a huge rock so exactly balanced upon another rock, that a boy of 14 years of age can move it, causing a noise more sonorous than that of a drum, whence it derives its name. Pawtuxet village, at the mouth of Pawtuxet river, is a large manufacturing village. - It contains two churches, a Congregational and Baptist; a number of stores, and an extensive cotton factory. There are in the 68 stores, two woollen factories, 28 cotton factories with 73,041 spindles, eight grist-mills, two saw-mills, two tanneries; five academies, 186 students; 36 schools, 1320 scholars. Pop. 6726.

## WASHINGTON.

WARWICK, p. t., Orange co., N. Y., 24 m. S.W. Newburg, 111 m. S.S.W. Albany, 268 W. Drained by Wallkill river. It contains two churches, a Dutch Reformed and Baptist; 16 stores, one fulling-mill, one woollen factory, eight grist-mills, 14 saw-mills, four tanneries, 15 distilleries; one academy, 147 students; 20 schools, 1034 scholars. Pop. 5113.

WARWICK, t., Bucks co., Pa., 5 m. S.E. Doylestown, 21 m. N. Philadelphia. Drained by Nishaminy creek. It contains a church, three stores, one flouring-mill, four grist-mills, three saw-mills, two oil-mills; two schools, 58 scholars. Pop. 1259.

WARWICK, t., Lancaster co., Pa., 9 m. N. Lancaster. Drained by Great Chiques, Hanmer, Cocalico, and Moravia creeks. It has 12 stores, two flouring-mills, 10 grist-mills, seven saw-mills, one oil-mill, four tanneries, six distilleries, one brewery, one pottery; one academy, 104 students; one school, 35 scholars. Pop. 3725.

WASHINGTON, county, Me. Situated in the S.E. part of the state, and contains 3500 sq. m. Bounded E. by St. Croix river, and Passamaquoddy bay, which separates it from New-Brunswick. Drained by Machias, Pleasant, and Narragansett river. The Atlantic, which bounds it on the S., is indented with numerous bays, that afford fine harbours. It contained in 1840, 12,021 neat cattle, 20,561 sheep, 4827 swine; and produced 20,871 bushels of wheat, 2624 of rye, 304 of Indian corn, 3213 of buckwheat, 5914 of barley, 22,111 of oats, 410,868 of potatoes, 1338 pounds of sugar. It had three commercial houses in foreign trade, 168 retail stores, 16 lumber-yards, with a capital of \$98,300; 50,000 bushels of domestic salt were produced; three fulling-mills, one furnace, 36 grist-mills, 159 saw-mills, 14 tanneries; two academies, 191 students; 211 schools, 9273 scholars. Pop. 28,327. Capital, Machias.

WASHINGTON, county, R. I. Situated in the S. part of the state, and contains 367 sq. m. Bounded S. by the Atlantic, E. by Narragansett bay. Drained by Pawcatuck river and its branches, the principal of which are Wood and Charles rivers. It has several good harbours, and contained in 1840, 10,741 neat cattle, 35,136 sheep, 8399 swine; and produced 1428 bushels of wheat, 6267 of rye, 113,591 of Indian corn, 12,590 of barley, 69,317 of oats, 257,731 of potatoes. It had 80 stores, six lumber-yards, 16 fulling-mills, 25 woollen factories, 23 cotton factories with 23,666 spindles, 28 grist-mills, 21 saw-mills, 10 tanneries, one printing-office; six academies, 270 students; 19 schools, 742 scholars. Pop. 14,324. Capital, North Kingston.

WASHINGTON, county, Vt. Situated near the centre of the state, and contains 425 sq. m. Organized in 1810 by the name of Jefferson, which was changed to Washington county in 1814. Watered by Otis or Winoski river, which flows through the Green mountains, opening a passage for a road with no heavy hills; though the mountains tower on its sides. It contained in 1840, 25,415 neat cattle, 110,872 sheep, 12,150 swine; and produced 44,110 bushels of wheat, 5736 of rye, 63,108 of Indian corn, 23,066 of buckwheat, 4028 of barley, 200,294 of oats, 698,745 of potatoes. It had 45 stores, one furnace, 32 fulling-mills, three woollen factories, six flouring-mills, 36 grist-mills, 85 saw-mills, five oil-mills, one paper-mill, 10 tanneries, six printing-offices, two daily and six weekly newspapers, and one periodical; two academies, 231 students; 196 schools, 6836 scholars. Pop. 23,506. Capital, Montpelier.

WASHINGTON, county, N. Y. Situated in the E. towards the N. part of the state, and contains 807 sq. m. Bounded W. by Hudson river, N.W. by lake George, N.E. by part of lake Champlain, N. by Poultney river. Watered by Battenkill and Hoosick rivers and their tributaries, and Wood creek. It contained in 1840, 39,159 neat cattle, 210,610 sheep, 27,688 swine; and produced 49,189 bushels of wheat, 136,510 of rye, 297,405 of Indian corn, 32,642 of buckwheat, 9569 of barley, 448,064 of oats, 851,545 of potatoes, 4246 pounds of sugar. It had 140 stores, one furnace, three forges, 15 fulling-mills, 13 woollen factories, two cotton factories with 3144 spindles, two flouring-mills, 31 grist-mills, 93 saw-mills, one powder-mill, 19 tanneries, two potteries, four printing-offices, four weekly newspapers; 10 academies, 482 students; 205 schools, 7526 scholars. Pop. 41,080. Capitals, Sandy Hill and Salem.

WASHINGTON, county, Pa. Situated in the S.W. part of the state, and contains 1000 sq. m. Bounded E. by Monongahela river, and drained by its tributaries, and by Raccoon creek, which flows into Ohio river. Bituminous coal is abundant. It contained in 1840, 35,344 neat cattle, 222,631 sheep, 54,285 swine; and produced 666,200 bushels of wheat, 38,157 of rye, 653,692 of Indian corn, 29,368 of buckwheat, 11,913 of barley, 1,862,528 of oats, 581,569 of potatoes, 56,032 pounds of sugar. It had 120 stores, three fulling-mills, three woollen factories, two glass houses, 25 flouring-mills, 66 grist-mills, 72 saw-mills, 30 tanneries, 18 distilleries, two potteries; two colleges, 349 students; six academies, 175 students; 170 schools, 6490 scholars. Pop. 41,279. Capital, Washington.

## WASHINGTON.

**WASHINGTON, county, Md.** Situated towards the W. part of the state, and contains 440 sq. m. Bounded S. by Potomac river. Drained by Conecocheague, Antietam, and other creeks flowing into Potomac river. It had in 1840, 15,841 neat cattle, 15,795 sheep, 36,418 swine; and produced 668,787 bushels of wheat, 111,829 of rye, 635,041 of Indian corn, 1864 of buckwheat, 436,864 of oats, 75,783 of potatoes. It had two commission houses in foreign trade, 96 stores, one furnace, two forges, seven fulling-mills, two woollen factories, 52 flouring-mills, nine grist-mills, 43 saw-mills, one oil-mill, 20 tanneries, 16 distilleries, three breweries, three potteries, one ropewalk, six printing-offices, five weekly newspapers; two academies, 95 students; 53 schools, 1823 scholars. Pop.: whites, 24,724; slaves, 2346; free coloured, 1580; total, 28,850. Capital, Hagerstown.

**WASHINGTON, county, Va.** Situated in the S.W. part of the state, and contains 764 sq. m. Drained by New river, and by branches of Great Kanawha and Clinch rivers. It contained in 1840, 13,810 neat cattle, 18,530 sheep, 32,450 swine; and produced 106,750 bushels of wheat, 8116 of rye, 397,476 of Indian corn, 4236 of buckwheat, 1168 of barley, 255,770 of oats, 60,180 of potatoes, 62,740 pounds of sugar. It had nine stores, 40 grist-mills, 36 saw-mills, two powder-mills, nine tanneries, 103 distilleries, one printing-office, one weekly newspaper; one college, 150 students; 18 schools, 551 scholars. Pop.: whites, 10,731; slaves, 2058; free coloured, 212; total, 13,001. Capital, Abingdon.

**WASHINGTON, county, N. C.** Situated on the E. part of the state, and contains 360 sq. m. Bounded N. by Albemarle sound, N.W. by Roanoke river. It contained in 1840, 2925 neat cattle, 2125 sheep, 9319 swine; and produced 8707 bushels of wheat, 155,023 of Indian corn, 4349 of oats, 19,672 of potatoes, 6050 pounds of rice, 79,925 of cotton. It had one commercial and two commission houses in foreign trade, 13 retail stores, three flouring-mills, four grist-mills, four saw-mills, 13 distilleries; two schools, 38 scholars. Pop.: whites, 2639; slaves, 1727; free coloured, 159; total, 4525. Capital, Plymouth.

**WASHINGTON, county, Ga.** Situated E. of the centre of the state, and contains 760 sq. m. Bounded N.E. by Ogeechee river, S.W. by Oconee river, by branches of which it is drained. It contained in 1840, 10,806 neat cattle, 4439 sheep, 26,426 swine; and produced 20,066 bushels of wheat, 1274 of rye, 208,747 of Indian corn, 2639 of oats, 15,677 of potatoes, 1,190,770 pounds of cotton. It had 17 stores, two flouring-mills, 18 grist-mills, 11 saw-mills, 29 distilleries; five academies, 153 students; eight schools, 108 scholars. Pop.: whites, 5062; slaves, 4566; free coloured, 37; total, 10,555. Capital, Sandersville.

**WASHINGTON, county, Flor.** Situated towards the W. part of the territory, and contains 1500 sq. m. Bounded S. by the gulf of Mexico, W. by Choctawhatchee river. Drained by Econfint river. The fine bay of St. Andrews contains a large quantity of live oak on its borders. It contained in 1840, 4601 neat cattle, 52 sheep, 2637 swine; and produced 24,965 bushels of Indian corn, 5365 of potatoes, 2100 pounds of rice, 176,120 of cotton, 4170 of sugar. It had five grist-mills; three academies, 52 students; five schools, 108 scholars. Pop.: whites, 504; slaves, 353; free coloured, 2; total, 859. Capital, Roche's Bluff.

**WASHINGTON, county, Ala.** Situated towards the S.W. part of the state, and contains 840 sq. m. Bounded E. by Tombigbee r. Drained by Escatawpa river. It contained in 1840, 29,361 neat cattle, 2221 sheep, 14,083 swine; and produced 396 bushels of wheat, 152,049 of Indian corn, 2383 of oats, 29,934 of potatoes, 355,748 pounds of cotton. It had eight stores, 10 grist-mills, four saw-mills, 14 oil-mills, two tanneries, two potteries; 12 schools, 201 scholars. Pop.: whites, 2843; slaves, 2434; free coloured, 23; total, 5300. Capital, Barryton.

**WASHINGTON, county, Miss.** Situated in the W. part of the state, and contains 2420 sq. m. Bounded W. by Mississippi river, S.E. by Yazoo river. Watered by Sunflower river and its branches. It produced in 1840, 15,100,400 pounds of cotton. Pop.: whites, 654; slaves, 6627; free coloured, 6; total, 7287. Capital, Princeton.

**WASHINGTON, parish, La.** Situated in the E. part of the state, and contains 792 sq. m. Bounded E. by Pearl river. Drained by Bouchechitto and Chifungte rivers. It contained in 1840, 9000 neat cattle, 1059 sheep, 14,250 swine; and produced 98,790 bushels of Indian corn, 59,000 of oats, 9850 of potatoes, 251,250 pounds of rice, 375,200 of cotton. It had eight stores, one cotton factory with six spindles, 11 grist-mills, 13 saw-mills; two academies, 70 students; two schools, 50 scholars. Pop.: whites, 1856; slaves, 791; free coloured, 2; total, 2649. Capital, Franklinton.

**WASHINGTON, county, Tenn.** Situated in the E. part of the state, and contains 590 sq. m. Drained by Nolachucky river and its branches. It contained in 1840, 9663 neat cattle, 12,032 sheep, 70,526 swine; and produced 121,424 bushels of wheat, 3082 of rye, 330,559 of Indian corn, 165,758 of oats, 13,936 of potatoes, 15,162 pounds of tobacco. It had

18 stores, two furnaces, eight forges, six flouring-mills, 27 grist-mills, 28 saw-mills, three oil-mills, 11 tanneries, 56 distilleries, two printing-offices, two weekly newspapers; one college, 10 students; one academy, 34 students; 18 schools, 380 scholars. Pop.: whites, 10,600; slaves, 915; free coloured, 236; total, 11,751. Capital, Jonesboro'.

**WASHINGTON, county, Ky.** Situated a little N. of the centre of the state, and contains 475 sq. m. Bounded N. by Chaplin's fork of Salt river, by branches of which it is drained. It contained in 1840, 5955 neat cattle, 9966 sheep, 28,200 swine; and produced 27,350 bushels of wheat, 21,433 of rye, 281,730 of Indian corn, 28,720 of oats, 7088 of potatoes, 72,000 pounds of tobacco. It had 16 stores, two flouring-mills, 30 grist-mills, seven saw-mills, six tanneries, 29 distilleries, 11 breweries; one academy, 80 students; 22 schools, 636 scholars. Pop.: whites, 7900; slaves, 2658; free coloured, 38; total, 10,596. Capital, Springfield.

**WASHINGTON, county, O.** Situated in the S.E. part of the state, and contains 713 sq. m. Bounded S.E. by Ohio river. Watered by Muskingum and Little Muskingum rivers, on which bituminous coal abounds. It was the first organized county in the state, and contained in 1840, 12,122 neat cattle, 34,790 sheep, 17,399 swine; and produced 166,650 bushels of wheat, 320,471 of Indian corn, 1454 of buckwheat, 147,210 of oats, 98,302 of potatoes, 11,390 pounds of tobacco, 11,996 of sugar. It had 58 stores, two fulling-mills, one flouring-mill, 41 grist-mills, 60 saw-mills, one oil-mill, 10 tanneries, four distilleries; one college, 100 students; one academy, 53 students; 107 schools, 4476 scholars. Pop. 30,823. Capital, Marietta.

**WASHINGTON, county, Ia.** Situated towards the S. part of the state, and contains 540 sq. m. Bounded N. by Muscatack river. Drained by Great Blue river. Organized in 1813. It contained in 1840, 10,434 neat cattle, 17,347 sheep, 21,621 swine; and produced 52,508 bushels of wheat, 1850 of rye, 164,401 of Indian corn, 50,047 of oats, 10,751 of potatoes, 71,161 pounds of tobacco. It had 30 stores, two cotton factories with 564 spindles, eight flouring-mills, 32 grist-mills, 37 saw-mills, one oil-mill, 22 tanneries, two printing-offices, two weekly newspapers; two academies, 96 students; 19 schools, 519 scholars. Pop. 15,269. Capital, Salem.

**WASHINGTON, county, Ill.** Situated towards the S. part of the state, and contains 656 sq. m. Bounded N.W. by Kaskaskia river, and drained by its branches. It contained in 1840, 10,360 neat cattle, 5300 sheep, 18,990 swine; and produced 23,540 bushels of wheat, 272,990 of Indian corn, 61,080 of oats, 7175 of potatoes. It had five stores, 14 schools, 299 scholars. Pop. 4810. Capital, Nashville.

**WASHINGTON, county, Wis.** Situated in the E. part of the territory, and contains 675 sq. m. Bounded E. by Iako Michigan. Watered by Milwaukee and Menominee rivers. It had in 1840, 277 neat cattle, 288 swine; and produced 182 bushels of wheat, 588 of Indian corn, 165 of oats, 2150 of potatoes, 4659 pounds of sugar. It had three saw-mills, one school, 7 scholars. Pop. 343. Capital, Washington.

**WASHINGTON, county, Iowa.** Situated in the W. towards the S. part of the territory, and contains 648 sq. m. Watered by Iowa river, and Checaquo or Skunk river, and their tributaries. It contained in 1840, 600 neat cattle, 39 sheep, 864 swine; and produced 2210 bushels of wheat, 100,055 of Indian corn, 2155 of oats, 1357 of potatoes. It had five stores, two saw-mills. Pop. 1594. Capital, Washington.

**WASHINGTON, county, Mo.** Situated towards the S.E. part of the state, and contains 820 sq. m. Watered by head branches of Big, Big Black, and St. Francis rivers. It contains the celebrated "Iron Mountain," which consists of a mass of magnetic iron ore, so pure as to yield from 70 to 80 per cent of malleable iron under the ordinary process of preparing it. It contained in 1840, 9573 neat cattle, 5618 sheep, 19,420 swine; and produced 34,933 bushels of wheat, 263,285 of Indian corn, 3860 of buckwheat, 50,344 of oats, 4748 of potatoes, 5448 pounds of tobacco, 10,227 of sugar. It had 16 stores, one furnace, one forge, five grist-mills, four saw-mills, three tanneries, one distillery, one pottery; one academy, 83 students; 15 schools, 399 scholars. Pop.: whites, 6848; slaves, 923; free coloured, 42; total, 7231. Capital, Potosi.

**WASHINGTON, county, Ark.** Situated in the N.W. part of the state, and contains 900 sq. m. Drained by a head branch of White river. It contained in 1840, 11,734 neat cattle, 7947 sheep, 35,829 swine; and produced 16,384 bushels of wheat, 380,490 of Indian corn, 47,368 of oats, 24,264 of potatoes, 6070 pounds of tobacco, 13,685 of cotton. It had 32 stores, one cotton factory with 84 spindles, four flouring-mills, 12 grist-mills, eight saw-mills, nine tanneries, seven distilleries, one printing office; two academies, 75 students; 13 schools, 358 scholars. Pop.: whites, 6246; slaves, 883; free coloured, 19; total, 7148. Capital, Fayetteville.

**WASHINGTON, p. t., Lincoln co., Me.** 31. M. E. Augusta, 619 W. Drained by head branches of Damariscotta and Muscongus rivers. Incorporated in 1811 by the name of

## WASHINGTON.

Putnam. It has two stores, two grist-mills, five saw-mills; 12 schools, 645 scholars. Pop. 1600.

WASHINGTON, p. t., Sullivan co., N. H., 33 m. W. Concord, 473 W. Drained by head branches of Ashuelot and Contoocook rivers, issuing from ponds. Incorporated in 1766. It contains three churches, a Congregational, Baptist, and Universalist; three stores, one fulling-mill, two grist-mills, six saw-mills; four schools, 363 scholars. Pop. 1103.

WASHINGTON, p. t., Orange co., Vt., 15 m. S.E. Montpelier, 512 W. Watered by Jail branch of Winooski or Onion river, and by branches of Wait's and White rivers. Chartered in 1780. It contains two churches, three stores, one fulling-mill, five saw-mills; 20 schools, 517 scholars. Pop. 1359.

WASHINGTON, p. t., Litchfield co., Ct., 47 m. W.S.W. Hartford, 320 W. Watered by Shepaug river, a tributary of Housatonic river. It contains two Congregational churches, six stores, two fulling-mills, one cotton factory with 1664 spindles, one furnace, three forges, three grist-mills, seven saw-mills, one tannery, two distilleries; one academy, 20 students; 10 schools, 418 scholars. Pop. 1622.

WASHINGTON, p. t., Dutchess co., N. Y., 12 m. N.E. Poughkeepsie, 79 m. S. by E. Albany, 314 W. Drained by tributaries of Wappinger's and Ten Mile creeks. It contains three churches, a Presbyterian and two Friends, six stores, three cotton factories with 1848 spindles, two flouring-mills, three grist-mills, seven saw-mills, two tanneries; eight schools, 326 scholars. Pop. 2833.

WASHINGTON, t., Bergen co., N. J., Bounded E. by Hackensack river, W. by Saddle river. It has six stores, six grist-mills, 14 saw-mills, three tanneries, one distillery; four schools, 135 scholars. Pop. 1833.

WASHINGTON, t., Burlington co., N. J., 22 m. S. Woodbury. Drained by Little Egg Harbour river and its branches. It has four stores, two furnaces, five grist-mills, eight saw-mills, one paper-mill; eight schools, 470 scholars. Pop. 1630.

WASHINGTON, t., Gloucester co., N. J., 12 m. W. Woodbury. Drained by Pensauken and Cooper's creeks. It contains an Episcopal church, six stores, one woollen factory, one glass house, one grist-mill, eight saw-mills; four schools, 131 scholars. Pop. 1545.

WASHINGTON, t., Morris co., N. J., 18 m. W. Morristown. Drained by the S. branch of Raritan river. Schooley's mountain has a mineral spring and hotels which are a celebrated place of summer resort. It contains a Presbyterian and a Lutheran church, 17 stores, one forge, four flouring-mills, six grist-mills, eight saw-mills, four oil-mills, one tannery, one brewery; 15 schools, 753 scholars. Pop. 2451.

WASHINGTON, p. b., capital of Washington co., Pa., 209 m. W. Harrisburg, 236 W. It is situated on the National road, and contains a courthouse, which cost \$20,000, a jail, four churches, a Presbyterian, Associate Reformed, Methodist Episcopal, and a Cumberland Presbyterian; a female seminary; 23 stores, a steam woollen factory, one saw-mill, one tannery, one pottery, two printing-offices, two weekly newspapers; one academy, 100 students; seven schools, 300 scholars, and 2062 inhabitants. It is the seat of Washington college, founded as an academy in 1787, chartered as a college in 1806, which has a president and five professors, 224 alumni, 59 students in the college proper, and, including the preparatory department, 159 students, and 3300 volumes in its libraries. The commencement is on the last Wednesday in September.

WASHINGTON, t., Luzerne co., Pa. It has two stores, one fulling-mill, two grist-mills, five saw-mills; four schools, 128 scholars. Pop. 1255.

WASHINGTON, t., Berks co., Pa. It has four stores, one forge, four grist-mills, three oil-mills, one tannery. Pop. 1210.

WASHINGTON, t., Franklin co., Pa., 11 m. S.W. Chambersburg. Drained by two branches of Antietam creek. It has seven stores, two fulling-mills, two woollen factories, six flouring-mills, one grist-mill, 14 saw-mills, three tanneries, seven distilleries, one brewery, two potteries; 10 schools, 310 scholars. Pop. 2404.

WASHINGTON, t., York co., Pa. It has three stores, four grist-mills, four saw-mills, two tanneries, one distillery, one pottery. Pop. 1236.

WASHINGTON, t., Fayette co., Pa. It has nine stores, one woollen factory, one grist-mill, five saw-mills, one paper-mill, two tanneries; four schools, 160 scholars. Pop. 1515.

WASHINGTON, t., Cambria co., Pa. Drained by Kiskimintus river. It has five stores, one grist-mill, eight saw-mills; six schools, 210 scholars. Pop. 1266.

WASHINGTON, t., Erie co., Pa. Drained by head branches of French creek. It has two saw-mills, 18 schools, 700 scholars. Pop. 1851.

WASHINGTON, t., Westmoreland co., Pa., 16 m. N. Greensburg. Bounded N.E. by Kiskimintus river. It has four stores, five grist-mills, seven saw-mills; 10 schools, 300 scholars. Pop. 2004.

WASHINGTON, city, District of Columbia, capital of the

United States, is in 38° 53' 23" N. lat., and 77° 1' 24" W. long. It is 28 m. S.W. Baltimore; 136 m. S.S.W. Philadelphia; 225 m. S.W. New-York; 432 m. S.W. Boston; 856 m. E. by S. St. Louis; 544 m. N.N.E. Charleston; 662 m. N.N.E. Savannah, Ga.; 1203 m. N.E. New-Orleans. The population in 1800, was 8202; in 1820, 13,247; in 1830, 18,827; in 1840, 23,364, of whom 1713 were slaves. Employed in commerce, 103; in manufactures and trades, 836; in navigating the ocean, 45; do. rivers and canals, 25; in the learned professions, 83. It is situated on the E. side of Potomac river, at the junction of the Anacostia or eastern branch, 295 m. from the ocean, by the course of the river and bay. The city contains a little over 8 sq. m., or 5120 acres. The two rivers at the junction of which it stands, add to its natural beauty, and afford great facilities for commerce; but the large city of Baltimore in the vicinity will be likely long to eclipse it in commerce and manufactures, and prevent it from becoming a very large city. In addition to commerce and manufactures, large European capitals are extensively aided by luxurious and expensive courts, which last source of business and prosperity, it is to be hoped, Washington will forever want. Although it derives extensive advantages from the officers of the government, the American congress, and the foreign ministers which the capital collects around it; yet such is the economy of the government of the United States, that this source of business is but a fraction of that afforded by a European capital. The annual allowance of the princess of Wales, while travelling for the pleasure of her husband, would have paid the salary of the president of the United States for eight years, the longest time which that office has been held, by any one incumbent. The city is encompassed by a fine range of hills, forming a natural amphitheatre, and covered in part with trees and underwood, and presenting to the eye verdant and cultivated slopes. These elevations form beautiful sites for villas and private residences, and command an extensive and varied prospect of the city, of the surrounding country, and of the meanderings of the noble Potomac, as far as the eye can reach. These things doubtless attracted the eye of the father of his country, at whose suggestion this spot was early fixed on as the future capital of the nation; and though its growth has been less than was once anticipated, it has been considerable and is increasing. Probably the bustle of a large city would not much improve it as the seat of the national government. It enjoys two important requisites for health, pure air and good water; and there is sufficient refined and elegant society, particularly during the session of congress in the winter season, to render it a pleasant place of residence. The ground on which the city stands originally belonged to the state of Maryland, and was ceded to the United States on the 23d of December, 1783; and the original owners of the soil surrendered to the government the ground to be laid out as a city, and gave one half of the lots for the purpose of raising funds for the erection of the necessary public buildings. Three commissioners were appointed in January, 1791, who proceeded to plant the corner stone at Jones's point. The city was laid out under the direction of Andrew Elliot, who was appointed in 1792. For so much of the land as might be appropriated to the use of the United States, the commissioners were to pay at the rate of \$662 the acre, not including streets, and this was to be paid out of the proceeds of the sale of lots given by the proprietors. The city is laid out on a magnificent plan, but it is but very partially built on; but posterity may reap the advantages of it. Millions of dollars would have been saved, if the same forecast had been manifested in the early laying out of the city of New-York. The general elevation of the ground on which the city is built is about 40 feet above the level of the river, and there are some moderate elevations, on two of which the capitol and the president's house are built. It is regularly laid out with streets running N. and S. and crossed at right angles by others running E. and W. But the different parts of the city are connected by broad avenues, which traverse the rectangular divisions diagonally. This would be very inconvenient, if ground were scarce. But where the intersection of these avenues with each other and with the streets would form many acute angles, considerable rectangular or circular open grounds are left, which, when the city shall be built up, will give it an open appearance. The avenues and streets leading to important public points, are from 120 to 160 feet wide, and the other streets are from 70 to 110 feet wide. The avenues are named after the states of the union, and the other streets, beginning at the capitol, are denoted by the letters of the alphabet, as A north and A south, B north and B south, &c.; and east and west, they are designated by numbers, as 1st east, 1st west, &c. Pennsylvania avenue, from the capitol to the president's house, contains the most dense population, is Macadamized, has a fine flagged side walk on one side, and is much the handsomest street in the city. Five avenues radiate from the

## WASHINGTON.

capitol and five others from the president's house, giving these prominent places the most ready communication with all parts of the city. The buildings of Washington consist mostly of scattered clusters; nor is it probable that the magnificent plan of the city will soon be built up.

The public buildings of Washington have a magnificence becoming a great nation. The capitol is the finest building in the United States, and not inferior to any senate-house in the world. It is every way suitable that the representatives of the sovereign people should be accommodated in a building which would do honour to royalty, and be worthy of the most august legislative assembly in the world. The capitol is universally regarded as an honour to the nation. It is elevated 73 ft. above tide water, and affords a commanding view of the different parts of the city, and of the surrounding country. The building is of freestone, and covers an area of more than an acre and an half; the length of the front is 352 feet, including the wings; the depth of the wings is 121 feet. The projection of the east or main front, including the steps, is 65 feet wide; and another on the west front, with the steps, is 83 feet wide. In the projection on the east front, there is a splendid portico of 22 lofty Corinthian columns, 38 feet high; and in the west front there is a portico of 10 Corinthian columns. The height of the building to the top of the dome is 120 feet. Under the dome in the middle of the building is the rotundo, a circular room, 95 feet in diameter, and of the same height, adorned with sculptures in stone panels in bold relief, containing groups of figures representing Smith delivered by the interposition of Pocahontas; the landing of the pilgrims on Plymouth rock; the conflict of Boone with the Indians; and Penn treating with the Indians; and four magnificent paintings by Trumbull, with figures as large as life, representing the presentation to congress of the Declaration of Independence, in which all the figures, 47 in number, in that august assembly, which William Pitt in the British parliament pronounced superior in wisdom to any body of men whom he had ever heard or read of, are correct likenesses; the surrender of Burgoyne to General Gates; the surrender of Cornwallis at Yorktown; and Washington resigning his commission to congress at Annapolis. To these have recently been added the baptism of Pocahontas by Chapman, and the embarkation of the pilgrims by Weir. These paintings possess great merit as works of art, in addition to their commemoration of important events in American history. The rotundo has recently received a splendid additional ornament in Greenough's statue of Washington, a colossal figure in a sitting posture, twice as large as life. On the west of the rotundo is the library room of congress, 92 by 34 feet, and is 36 feet in height, containing in arched alcoves, over 23,000 volumes. The foundation of this library, after the burning of the capitol and its library by the British in the last war, was laid by the purchase of the entire private library of Mr. Jefferson, consisting of about 7000 volumes, many of them rare and valuable, for \$23,000. This library has been enlarged from time to time by an annual appropriation by congress of \$5000 for the purpose. In the second story of the south wing of the capitol is the hall of the house of representatives; of a semi-circular form, 96 feet long and 60 feet high, with a dome supported by 24 beautiful columns of variegated marble from the Potomac, with capitals of Italian marble, of the Corinthian order. The circular wall opposite the speaker, is surrounded by a gallery for men, and the chord of the arc, back of the speaker's chair, has a gallery for ladies. The room is ornamented with some fine statuary and paintings, and the whole furniture is elegant. The senate chamber is in the second story of the north wing of the capitol, and is semicircular, like that of the representatives, but smaller, being 78 feet long and 45 feet high. The vice president's chair is canopied with a rich crimson drapery, held by the talons of a hovering eagle. A light gallery of bronze running round the arc in front of the vice president's chair, is mainly appropriated to ladies. There is another gallery above and behind the chair, supported by fine Ionic columns of variegated marble. A magnificent chandelier hangs in the centre of the room, and the whole appearance of the furniture of the room is splendid. Below the senate chamber, and nearly of the same form and dimensions, though much less elegant, is the room of the supreme court of the United States, and there are in the building 70 rooms for the accommodation of committees, and officers of congress. The grounds around the capitol are spacious, containing 22 acres, highly ornamented with gravelled walks, shrubbery and trees, a naval monument ornamented with statuary, erected in honour of the youthful officers who fell in the battle of Tripoli, and fountains; and the whole is enclosed by a handsome iron fence. The whole cost of the building and its accompaniments has exceeded \$2,000,000.

The president's house is an elegant edifice of freestone, two lofty stories high, at the intersection of Pennsylvania,

Virginia, New-York, Connecticut, and Vermont avenues, and stands near the centre of a plat of ground of 20 acres, at an elevation of 44 feet above high tide water. The entrance front, faces north upon La Fayette square, and the southern front toward the garden, presents a fine view of the improved part of the city, of the Potomac river and bridge, and of the opposite shores of Maryland and Virginia. The building is 170 feet front, and 86 feet deep. The north front is ornamented with a fine Ionic portico of four lofty columns, projecting with three columns. The outer intercolumniation is for carriages to drive into to place the company under shelter. The middle space is the entrance for these visitors who come on foot; the steps from both lead to a broad platform in front of the door of entrance. The garden front is varied by having a rusticated basement, and by a semicircular projecting colonnade of six Ionic columns, with two flights of steps leading from the ground to the level of the principal story. The apartments within are admirably fitted to their purpose, and splendidly furnished, and every way fitted for the residence of the chief of a great nation, and for the reception of his various company. On the E. side of the president's house are two large buildings; and on the W. side two large buildings for the departments of state, of the treasury, of war and of the navy. The general postoffice and the patent office are also extensive buildings. These, with the new treasury building, have been recently erected, to supply the place of those which were burned a few years since. The new treasury building contains 150 rooms, and when completed will contain 250. It has a splendid colonnade, 457 feet in length. The general postoffice contains about 80 rooms, and is of the Corinthian order, with columns and pilasters, on a rustic base. The patent office, in addition to other spacious apartments, has one room in the upper story, 275 feet long and 65 feet wide, and when completed by wings according to the original design, will be upward of 400 feet in length. It is regarded as one of the most splendid rooms in the United States, and is devoted to the grand and increasing collections of the national institution. The portico of this building is of the same extent as that of the Parthenon at Athens, consisting of 16 columns, in double rows, 50 feet high. In the war-office was formerly kept the fine collection of Indian portraits, painted from the original heads by King. These valuable pictures are now in the custody, and adorn the collections of the national institution in the building of the patent office.

The navy yard is on the eastern branch, about three fourths of a mile S.E. of the capitol, and contains 27 acres of ground. It has houses for the officers, and shops and warehouses, two large ship houses, a neat armoury, and every kind of naval stores. One 74 gun ship; and four frigates of 44 guns each, have been built at this yard. The navy magazine is a substantial brick edifice on 70 acres of ground belonging to the United States, and a wharf for the convenience of receiving and carrying off the powder extends from the shore a short distance into the river. There are also in the city, a city hall, a hospital, a penitentiary, a theatre, &c.

The city contains 21 places of worship, four Presbyterian, three Episcopal, three Methodist, one Protestant Methodist, three Baptist, three Roman Catholic, one Unitarian, one Friends, and two African. There are two orphan asylums. There are three banks, with an aggregate capital of \$1,500,000; and two insurance companies, with a total capital of \$450,000.

Washington is separated from Georgetown by Rock creek, over which are two bridges. A substantial bridge on piles, over a mile in length, crosses the Potomac, leading to Alexandria. There is a bridge also over the Anacostia or eastern branch. This river has a sufficient depth of water for frigates to ascend to the navy yard, without being lightened. Vessels requiring 14 feet of water come up to the Potomac bridge. By means of the Chesapeake and Ohio canal, now completed to Hancock; 136 m., a communication is opened to a rich back country, and it may be expected that the commerce of Washington will increase. The Washington canal is a continuation of this canal through the city to the eastern branch. This canal has several basins, which, with the canal, are walled in with stone on both sides. It cost \$230,000.

There were in the city in 1840, 106 retail stores, with a capital of \$926,040; six lumber-yards, capital \$57,000; the precious metals were manufactured to the amount of \$13,000; various metals to the amount of \$17,300; hardware and cutlery was manufactured to the amount of \$500; bricks and lime were produced to the amount of \$48,200, with a capital of \$25,300; 48 persons manufactured hats and caps to the amount of \$39,500, with a capital of \$18,500; two tanneries produced 500 sides of sole leather, and 500 sides of upper leather, employing five persons, and a capital of \$2000; other manufactures of leather, as saddleries, &c., produced articles to the amount of \$43,950, with a capital

## WASHINGTON.

of \$20,300; six persons produced 100,000 pounds of soap, and 25,000 pounds of tallow candles, with a capital of \$7000; one brewery produced 165,000 gallons of beer, employing 20 persons, and a capital of \$63,000; two potteries, employing five persons, produced articles to the amount of \$3500, with a capital of \$3250; one rope-walk, employing four persons, produced cordage to the amount of \$1000, with a capital of \$425; 63 persons produced carriages and wagons to the amount of \$44,700, with a capital of \$29,800; 65 persons manufactured furniture to the amount of \$14,750, with a capital of \$7050; 11 printing-offices, nine binderies, three dailies, five weeklies, and five semi-weekly or tri-weekly newspapers, and three periodicals; employed 271 persons, and a capital of \$149,500; 30 brick or stone, and 23 wooden houses were erected, employing 54 persons, and cost \$56,910. The total amount of capital employed in manufactures was \$336,275.

The Columbian college was incorporated by an act of congress, in 1821. It is pleasantly situated on elevated ground N. of the president's house, about 2½ m. from the capitol. The buildings are the college edifice, five stories high, including the basement and the attic, having 48 rooms for students, with two dormitories attached to each; two dwelling houses for professors, and a philosophical hall, all of brick. It has a medical department attached, with an edifice, at the corner of tenth and E streets, at equal distances from the capitol and president's house. In the several departments are a president, 10 professors, and in the college proper 25 students, with 4300 volumes in its libraries. The commencement is on the first Wednesday of October. The whole number of alumni is 97. It is under the direction of the Baptists.

There were in the city in 1840, 12 academies, with 609 students; nine common and primary schools, with 380 scholars.

The national institution for the promotion of science was organized in 1840. The president of the United States is patron; the heads of departments constitute six directors on the part of the government, and six literary and scientific gentlemen are directors on the part of the institution. Its stated monthly meetings are held in the patent office building. Its collections are deposited in the grand hall of this building, 275 ft. long and 65 ft. wide, and constitute a rapidly increasing scientific museum. The United States exploring expedition has added largely to its curiosities. The historical society, and the Columbian institute, have united with it, with their libraries and collections. They have a valuable mineralogical cabinet. It is proposed to bring out regularly, volumes of transactions. If properly patronized, it may rise to eminence, and become an honour to the nation. The Union literary society has been in existence for many years, and holds a weekly discussion in the lecture room of the medical college, and is well attended. Sectarian religion and party politics are excluded from its discussions. The city library contains about 6000 volumes.

The congressional burying ground is in the eastern section of the city, about a mile and a half from the capitol, containing 10 acres of ground near the Anacostia or eastern branch. The grounds are neatly laid out and tastefully kept. It has already become the final resting place of a considerable number of eminent men, has some fine monuments; and contains a vault in which bodies are placed that are awaiting a removal.

One of the most interesting public works in Washington is the electrical telegraph of Professor S. F. B. Morse, of the New-York university. The United States congress appropriated \$30,000 to test the value of Professor Morse's invention, by means of a telegraphic communication to Baltimore, 38 m. distant. The thing has been done with the most complete success, and for a few thousand dollars less than the appropriation. This telegraph is undoubtedly superior to anything of the kind in the world, and Professor Morse claims that the invention is original with him, and is prepared to establish the fact; and all other electrical telegraphs must, probably, either adopt his arrangements, or have something less perfect. Nothing can well be conceived of more simple and efficient than this machine. By touching the keys of the machine at Washington, a corresponding machine at Baltimore impresses on strips of paper a set of signs, consisting of dots and dashes answering to the letters of the alphabet, in characters raised like the letters in the printing for the blind. Every letter is impressed in triplicate. It makes no difference whether the person is attending to the operations of the machine at Baltimore or not. If the machine at Washington were to write all night, whatever was written would be found in the morning impressed on rolls of paper, in characters as intelligible as the plainest print; and there being three copies of each letter impressed, they could be cut into three strips, and different parts given, if necessary, into the hands of different printers. At the late meeting of the National Democratic convention at Baltimore, for the nomination of

president and vice-president for the approaching election, intelligence was conveyed by the telegraph to the Hon. Silas Wright, then at Washington, that he had been nominated as the candidate for vice president. He answered by the same means, that he could not consent to be a candidate. His friends at Baltimore requested him by the telegraph to reconsider the matter. He replied that he had done so, and could in no case consent to be a candidate. These several communications, back and forth, were made in a few minutes, which could not have been done in as many hours, even by the railroad; and the convention proceeded to select another candidate before they adjourned. Professor Morse operates with a single circuit of wires. The first plan was to coat them with cotton twine, covered with gum shellac, and bury them in the earth in leaden tubes; but this was found to be troublesome, and needlessly expensive; and they are now coated with tar or other substance in addition to the shellac, and placed on the top of posts, 20 feet high. Professor Morse has even discovered that he can operate with a single wire, employing the earth to complete the circuit. It is not improbable that this invention may yet bring to light some new principles of electro-magnetism.

The seat of the federal government was removed to this city in the year 1800, and congress assumed the jurisdiction of the district on the 27th of February, 1801. The laws of Maryland are in force on the E. side of the Potomac, and of Virginia on the W. side, in the district, unless modified or repealed by congress. The north wing of the capitol was commenced in 1793, and finished in 1800, at an expense of \$480,292; the south wing was commenced in 1803, and finished in 1808, at an expense of \$303,808. The centre building was commenced and completed since the war, and the whole building, excepting the walls, rebuilt. In August, 1814, Washington was captured by the British, under General Ross, who burned the capitol, the president's house, the public offices, with the exception of the patent office, which was saved by the solicitation of its superintendent. The library of congress was burned. In the sanguinary wars which grew out of the French revolution, the capitals of Europe were successively in the hands of conquerors, who waged no Vandal war against public buildings, not connected with warlike operations, and with public libraries and public papers. Whatever disgrace was incurred, on the part of Americans, by the capture of Washington, was more than wiped off by the signal defenses and victories of Plattsburg, Baltimore, and New-Orleans, soon after succeeding. General Ross, who lead the expedition against Washington, was killed in the attack on Baltimore. It is not improbable that these victories resulted from the fact, that the spirit of the nation was roused, and its differences were harmonized, by the conflagration of Washington; and the truth was evinced that the Americans united, are invincible when defending their own soil. Had the war continued, more evidences of this truth would probably have been given.

WASHINGTON, p. v., capital of Beaufort co., N. C., 127 m. E. by S. Raleigh, 313 W. Situated on the N. side of Tar river, at its entrance into Pamlico river, at the head of ship navigation. It has a courthouse, jail, a church, several stores, and about 1200 inhabitants. Tonnage of the port in 1840 was 5401 tons.

WASHINGTON, p. v., capital of Wilkes co., Ga., 50 m. W. N. W. Augusta, 78 m. N. E. Milledgeville, 570 W. Situated on Kettle creek, a branch of Little river. It contains a courthouse, jail, a bank, an academy, all of brick, three churches, a Presbyterian, Methodist, and Baptist; 33 stores, a printing-office, and about 800 inhabitants, about one half of whom are coloured.

WASHINGTON, p. v., Adams co., Miss., 6 m. N. E. Natchez, 84 m. S. W. Jackson, 1104 W. It was incorporated to contain 1 m. square, and contains a hospital and poorhouse of brick, two churches, a Methodist and Baptist, a female seminary, a United States' land office, and about 400 inhabitants. It is the seat of Jefferson college, founded in 1802. It has a large brick edifice, capable of accommodating 100 students, has a fund of \$200,000, and an annual income of about \$3000. The library contains 1522 volumes.

WASHINGTON, p. v., capital of Mason co., Ky., 77 m. E. N. E. Frankfort, 465 W. It contains a courthouse, jail, an academy, four churches; and about 550 inhabitants.

WASHINGTON, t., Clermont co., O. Bounded S. by Ohio river. It has six stores, one grist-mill, two saw-mills, two tanneries, one distillery, 10 schools, 510 scholars. Pop. 2100.

WASHINGTON, t., Guernsey co., O. It has three schools, 105 scholars. Pop. 1353.

WASHINGTON, t., Holmes co., O. It contains four stores, three flouring-mills, three grist-mills, two saw-mills; four schools, 215 scholars. Pop. 1461.

WASHINGTON, t., Montgomery co., O. It has 12 schools, 915 scholars. Pop. 2210.

WASHINGTON, t., Shelby co., O. Watered by a branch 3 U.\*

## WASHITA.

of Miami river. It has three stores, two flouring-mills, one grist-mill, three saw-mills; five schools, 118 scholars. Pop. 1688.

WASHINGTON, t. Preble co., O. Watered by branches of Great Miami river. It contains four flouring-mills, four saw-mills. Pop. 2459.

WASHINGTON, L. Miami co., O. It contains Piqua village, and has three commission houses in foreign trade, 22 retail stores, two fulling-mills, two grist-mills, three saw-mills, one oil-mill. Pop. 1161.

WASHINGTON, t. Starke co., O. It has 600 scholars in schools. Pop. 1389.

WASHINGTON, L. Marion co., Ia. It has four stores, five grist-mills, 12 saw-mills, two tanneries, four distilleries; eight schools, 335 scholars. Pop. 1859.

WASHINGTON, t. Putnam co., Ia. It has five stores, one flouring-mill, five grist-mills, four saw-mills, one tannery, one distillery, one pottery; five schools, 385 scholars. Pop. 1572.

WASHINGTON, L. Washington co., Ia. It has 11 stores, two cotton factories with 564 spindles, four grist-mills, four saw-mills, one oil-mill, five tanneries, two printing-offices, two weekly newspapers. Pop. 1992. Washington is, as it deserves to be, a favourite name; and there are many other smaller towns of this name.

WASHITA, parish, La. Situated towards the N.E. part of the state, and contains 2090 sq. m. Drained by Washita river and its branches. It contained in 1840, 2642 neat cattle, 350 sheep, 4128 swine; and produced 32,898 bushels of Indian corn, 2240 of oats, 5360 of potatoes, 1,724,658 pounds of cotton. It had three grist-mills, two saw-mills; one academy, 30 students; five schools, 115 scholars. Pop.: whites, 2188; slaves, 2438; free coloured, 14; total, 4640. Capital, Monroe.

WASHITENAW, county, Mich. Situated towards the S.E. part of the state, and contains 720 sq. m. Watered by Huron river and its branches. It contained in 1840, 22,208 neat cattle, 19,273 sheep, 30,141 swine; and produced 216,597 bushels of wheat, 2941 of rye, 220,066 of Indian corn, 22,600 of buckwheat, 31,050 of barley, 284,181 of oats, 201,224 of potatoes, 108,047 pounds of sugar. It had 65 stores, two furnaces, three fulling-mills, two woolen factories, 11 flouring-mills, seven grist-mills, 41 saw-mills, four tanneries, four distilleries. Pop. 23,571. Capital, Ann Arbor.

WATERBOROUGH, p. t., York co., Me., 25 m. N. York, 76 m. S.W. Augusta, 521 W. Bounded N. by Little Ossipee river. Drained by head branches of Moresum river. Incorporated in 1787. It has one fulling-mill, three grist-mills, three saw-mills; 16 schools, 691 scholars. Pop. 1944.

WATERBURY, p. t., Washington co., Vt., 12 m. N.W. Montpelier, 525 W. Bounded S. by Onion or Winooski river. Watered by Waterbury river, which affords water-power. In the S.W. corner, the rocks have fallen down into Onion river, forming a curious natural bridge. It contains two churches, a Congregational and Methodist; two stores, two fulling-mills, one grist-mill, three saw-mills; 19 schools, 395 scholars. Pop. 1992.

WATERBURY, p. t., New-Haven co., Ct., 52 m. S.S.W. Hartford, 310 W. Nantucket river affords good water-power. It contains four churches, a Congregational, Episcopal, Methodist, and Baptist; 17 stores, five fulling-mills, three woolen factories, three cotton factories with 570 spindles, five grist-mills, 16 saw-mills, two tanneries, three distilleries; two academies, 75 students; 23 schools, 735 scholars. Pop. 3669.

WATBREE, river, rises in N. Carolina, which is called Catawba river, and flows into S. C., and unites with Congaree river to form Santee river.

WATERFORD, a marit. co. of Ireland, prov. Munster, having S. St. George's channel; E. Waterford harbour, by which it is separated from Wexford and Kilkenny; N. Tipperary; and W. Cork. Area 471,261 acres, of which 118,034 are unimproved mountain, with but little bog. Though generally coarse, there is a considerable extent of fine land in this county, particularly in its S.E. quarter, and the mountains afford good pasture for cattle. Estates, for the most part, very large; the largest, which belongs to the duke of Devonshire, is managed on the most liberal principles, and greatly improved. Here, indeed, and generally throughout Ireland (and we believe, that the same thing may be truly affirmed of England), tenants and occupiers on large estates are decidedly better off than those on the smaller class of properties. This is the principal dairy county of Ireland. When it was visited by Mr. Young, not 1-30th part was under the plough. (*Tour in Ireland*, 4to ed., p. 329.) The proportion in tillage is now, however, much larger. This has principally arisen from the vicious custom of dividing farms. "In this county," says Mr. Wakefield, "when the eldest daughter of a farmer marries, the father, instead of giving her a portion, divides his farm between himself and his son-in-law; the next daughter gets a half of the remainder; and this division and subdivision is continued as long

## WATERFORD.

as there are daughters to be disposed of. The sons are left to shift for themselves the best way they can." (i. 280.) Some of the dairy farmers are in easy circumstances; but the condition of the tillage farmers and cottiers is much the same as in other parts of Munster. Some very material improvements have, however, been introduced since 1820, into this and the contiguous counties. Improved swing-ploughs, made of iron, drawn by two horses driven by the ploughman, are now become very general. Land is kept cleaner; there has been a very great increase in the quantity of lime, used as manure; green crops are more attended to; and the quantity of wheat raised within these few years has been more than doubled; while there has been a decided falling off in the production of oats. There has also been a large increase of the exports of butter and bacon. Average rent of land, 12s. 6d. an acre. The minerals, which comprise copper, iron, &c., are but little wrought, and are unimportant; which, also, is the case with manufactures: a considerable cotton manufacture has, however, been established at Portlaw, and some glass is made in Waterford. Principal rivers, Blackwater, Suir, and Bride. Waterford is divided into seven baronies, and 74 parishes; and returns five members to the House of Commons; being two for the county, two for the borough of Waterford, and one for Dungarvan. Registered electors for the county, in 1839-40, 1675. In 1831, Waterford had 24,848 inhabited houses, 30,191 families, and 177,054 inhabitants; of whom 85,217 were males, and 91,837 females.

WATERFORD, a city, parl. bor., and seaport of Ireland, prov. Munster, on the estuary of the river Suir, about 10 m. from the sea, and 82 m. S.S.W. Dublin, lat. 52° 13' N., long. 7° 10' W. It is a county of itself, comprising 9683 acres, but it is locally situated near the W. extremity of the county of Waterford, of which it is the capital.

In 1831, the population of the county of the city amounted to 28,821, and that of the city itself to 26,377. The Boundary Act made no change in the limits of the parl. bor., which embrace the whole county of the city. The city is situated on the S., or S.W. side of the river; but a considerable portion of the county of the city is situated on its opposite side, the communication between them being maintained by a fine wooden bridge, 832 feet in length by 40 feet in width, constructed by an American artist. The quay, fronting the river, about 1 m. in length, is one of the finest in Europe, and is bounded on the land side by a range of well built houses. The other principal streets are the Mall, Beresford-street, Broad-street, &c.; but the city is very irregularly laid out; and in the older parts the streets are mostly narrow and dirty, with mean thatched houses, or rather hovels, occupied by a very poor and wretched population. In the more modern parts, however, the streets are comparatively broad, and the houses well built and substantial. The county of the city is divided into 12 parishes, of which three are entirely rural. The cathedral of the see of Waterford (now merged in that of Cashel), is a fine modern building, with an ornamented spire: near it is the bishops' palace, also, a handsome modern structure. Here are three parish churches, and four Roman Catholic chapels, the largest of which is the cathedral. The Presbyterians, Baptists, Methodists, Independents, and Quakers have, also, their respective places of worship. Among the public buildings, exclusive of the churches, may be noticed the town-hall, chamber of commerce, county and city prisons and court-houses, artillery barracks, penitentiary, custom-house, St. Reginald's tower, on the quay, an ancient fortress, now a police barrack, &c.

The educational establishments comprise an endowed classical school, under the patronage of the corporation, which provides a residence and salary for the head master; the college of St. John, a plain but spacious building, provides instruction for candidates for the Roman Catholic ministry, preparatory to their entrance into the college of Maynooth; and there are various other public and private schools. Mr. Inglis states that he visited a Catholic school, at which upwards of 700 children were educated by an association of young men, called the "Brothers of the Christian Schools." Here, also, is the Waterford institution for the diffusion of knowledge, with a library and a small museum, a literary and scientific society, in which lectures are delivered, and agricultural and horticultural societies. In 1841 it had no fewer than five weekly newspapers.

The charitable institutions comprise a Blue-coat school for Protestant boys, founded about 1700, and possessing an estate of 1400 acres; a Blue-coat hospital for Protestant girls, founded in 1740; Widows' apartments, erected in 1762, for the maintenance of 10 poor clergymen's widows; the Leper hospital, founded by King John, and now used as an infirmary, is capable of accommodating 400 patients; the Holy Ghost hospital, founded in 1240, and now appropriated to the reception of females; the fever hospital, the first of the kind in Ireland, opened in 1799, and capable of receiving 150 patients; the lunatic asylum for the county

## WATERFORD.

and city, a large modern building, has accommodation for 100 patients; the house of industry, opened in 1779, for the relief of the poor, and the punishment of vagrants and sturdy beggars; a mendicity institution, with similar objects, was opened in 1830. There is also a lying-in hospital, a charitable loan fund, and several orphan societies.

The manufactures of Waterford are unimportant, comprising only a glass-work and several breweries. It is, however, better situated for trade than any other town of Ireland. The harbour is excellent, vessels of 800 tons burden coming up to the quays. The Suir, which is navigable for barges as far as Clonmel, gives it a considerable command of inland navigation, and it is also the principal entrepot for the produce brought down by the Barrow and its important tributary the Nore, as well as for the produce which is to be conveyed inland by these channels; its trade is in consequence great, and rapidly increasing. Its exports of raw produce, including corn and flour, butter, beef, pork, and bacon, hides, tallow, &c., exceed those from any other Irish port, and amount, at present, to above £2,000,000 a year. The opening of a steam communication between Waterford and Bristol, and other towns, has been of peculiar advantage to the first. Subjoined is a

STATEMENT of the quantity and value of the principal articles exported from Waterford during the year ending the 30th April, 1835:

Principal Articles.	Quantity.	Value.		
		L.	s.	d.
Beef . . . tierces	33 at 120s.	214	10	0
Pork . . . do.	672 — 50s.	3,024	0	0

There belonged to the port in 1841, 115 vessels of the aggregate burden of 19,309 tons; and the gross customs duty received at the port in 1840, amounted to £196,389. The management of the port is vested in 24 harbour commissioners, nominated partly by the chamber of commerce, incorporated in 1815, and partly by the corporation. Postoffice revenue, in 1830, £4727; in 1836, £5536. Branches of the Bank of Ireland, the Provincial bank, and the Agricultural bank, have been opened in the town.

Being the place at which Henry II. landed, in 1172, to take possession of his conquests in Ireland, Waterford was early distinguished by marks of royal favour. It received its first charter from King John, and had no fewer than 12 additional charters from succeeding monarchs. It appears, however, that the right to send two representatives to the Irish House of Commons was not conferred by charter, but rested only on prescription, the practice having commenced in 1374. At the union, Waterford was authorized to send one member to the imperial House of Commons, and under the Reform Act he sends two members. Registered electors, in 1839-40, 1963. The limits of the municipal borough are much less extensive than those of the parliamentary borough. Under the act 3 and 4 Victoria, cap. 108, the city is divided into five wards, and is governed by a mayor, five other aldermen, and 30 councillors. It has a court of record, which decides pleas to any amount; a civil bill court for debts from £2 to £10; and a mayor's court for the decision of claims as to wages. Assizes for the county and city are held here twice a year, and general sessions of the peace fifteen times.

It is rather singular, that notwithstanding the increase of its trade, there is a great deal of abject poverty and misery in Waterford. Some improvements have, however, taken place, both in respect of cleanliness and of the dress of the lower orders. When Mr. Inglis was here, whiskey drinking prevailed to a frightful extent; but, thanks to the exertions of Father Mathew, this has been materially diminished. (*Parl. Reports and Private Information.*)

WATERFORD, p. t., Oxford co., Me., 53 m. W. Augusta, 558 W. Incorporated in 1797. It has four stores, two fulling-mills, three grist-mills, eight saw-mills, one oil-mill, two tanneries; 12 schools, 527 scholars. Pop. 1381.

WATERFORD, p. t., Caledonia co., Vt., 49 m. E.N.E. Montpelier, 547 W. Bounded S.E. by Connecticut r., in which, opposite to the t., is a portion of the 15 m. falls. Watered by Passumpsic river. It has three churches, a Congregational, Methodist, and Free-will Baptist, three stores, eight grist-mills, one saw-mill; one academy, 41 students, 15 schools, 501 scholars. Pop. 1383.

## WATERTOWN.

WATERFORD, p. t., New-London co., Ct., 46 m. S.E. Hartford, 451 W. Bounded E. by Thames river, S. by Long Island sound. Watered by Niantic river, which is navigable 3 or 4 m. from the sound, by a bay of the same name into which it enters, for sloops of 30 tons. It contains three Baptist churches, four stores, three grist-mills, one oil-mill; 10 schools, 532 scholars. Pop. 2320.

WATERFORD, p. t., Saratoga co., N. Y., 10 m. N. Albany, 380 W. The Mohawk here enters Hudson river, which bounds it on the E. There is an outlet of the canal by three locks of 11 ft. fall each. Sloops navigating Hudson river ascend by the dam and lock at Troy to this place. The village has four churches, a Presbyterian, Methodist, Dutch Reformed, and an Episcopal, an academy, a female seminary, a bank, various mechanic establishments, 200 dwellings, and about 1400 inhabitants. A bridge connects it with Lansingburg, 800 ft. long across the Hudson, which cost \$70,000. The Champlain canal and the Troy and Saratoga railroad pass through it. The town has 23 stores, one grist-mill, one saw-mill, one tannery; five schools, 375 scholars. Pop. 1824.

WATERFORD, t., Gloucester co., N. J., 12 m. W. Woodbury, 51 S.S.W. Trenton, 161 W. Drained by Pensauken and Cooper's creeks. It contains an Episcopal church, 10 stores, two glass-houses, two grist-mills, 10 saw-mills, one oil-mill, four distilleries; eight schools, 425 scholars. Pop. 3467.

WATERLOO, a hamlet of Belgium, prov. Brabant, on the verge of the forest of Soignies, and on the road from Brussels to Charleroi, 9 m. S. by E. the former. This village will be forever memorable in military history for the great battle fought in its vicinity on the 18th of June, 1815, between the allied army under the duke of Wellington, and the French, under Napoleon. There is some discrepancy in the statements on the subject, but each army probably consisted of about 70,000 men. The French began the attack between 11 and 12 o'clock forenoon. The object of Napoleon was to defeat the British, or force them to retreat, before the Prussians, who he knew were coming up, could arrive on the field; while that of the duke of Wellington was to maintain his ground till he could be joined by his allies, when it might be in his power to become the assailant. The attacks of the French were repeated with the greatest fury; but they made no serious impression on the British, by whom they were sustained and repelled with invincible courage and resolution. At length, about 4 past 6 o'clock, the Prussians came into the field, with a strong force of from 15,000 to 20,000 men. The English then became the assailants; and though Napoleon brought forward his guard, which had not previously been engaged, it could not stem the torrent, and, having been forced to give way, the whole army got into inextricable confusion, and the rout became universal. The slaughter was enormous. The British lost, besides officers, about 15,000 men killed and wounded. The French loss is not exactly known; but it was not, perhaps, less, in the battle and pursuit, than 30,000 men. All their cannon and baggage also fell into the hands of the conquerors; and it may, indeed, be said that the French army was entirely destroyed.

Such was the battle of Waterloo, in which the star of Napoleon set never to shine again! It is not, however, to be denied that he did all that was possible in the desperate circumstances under which he was placed. He had already defeated and beat back the Prussians; and his only chance of being able to make head against the forces that were marching against him, of awakening the enthusiasm of the French, and paralysing his enemies, depended on his being able to defeat the army under the duke of Wellington before it could form a junction with the Prussians. The skill of the British general, and the invincible courage and resolution of his troops, defeated this project; but it was worthy the genius of Napoleon, whose efforts in this "death struggle" were well seconded by his troops, who, though unsuccessful, did all that brave men could do.

WATERLOO, p. t., semi-capital of Seneca co., N. Y., 173 m. W. by N. Albany, 346 W. Bounded S. by Seneca river, along which passes the Seneca and Cayuga canal. It contains four churches, a Presbyterian, Episcopal, Methodist, and Baptist, 10 stores, one fulling-mill, one woollen-factory, one furnace, one flouring-mill, two saw-mills, one oil-mill, one tannery, two distilleries, one printing-office, one semi-weekly newspaper; one academy, 66 students, six schools, 278 scholars. Pop. 3036.

WATERTOWN, p. t., Middlesex co., Mass., 7 m. W. Boston, 433 W. Bounded S. by Charles river, which is navigable to this place for vessels requiring 6 or 7 ft. water. It contains three churches, a Unitarian, Baptist, and a Universalist, a United States arsenal, containing 40 acres of ground, with several large brick buildings enclosed by a high fence, on the N. bank of Charles river. The Provincial congress held their sessions here in 1775. It contains 11 stores, seven tanneries, one paper-mill; one academy, 30 students, seven schools, 402 scholars. Pop. 1810.

## WATERVILLE.

**WATERTOWN, p. t.**, Litchfield co., Ct., 42 m. S.S.W. Hartford, 330 W. It contains two churches, a Congregational and an Episcopal, four stores, two fulling-mills, two grist-mills, six saw-mills, two tanneries; nine schools, 354 scholars. Pop. 1442. It was the birth-place of John Trumbull, the celebrated author of *McFingal*.

**WATERTOWN, p. t.**, capital of Jefferson co., N. Y., 164 m. N.W. Albany, 416 W. Bounded N. by Black river, which affords immense water-power. It contains a courthouse, jail, seven churches, two Presbyterian, an Episcopal, Methodist, Baptist, Universalist, and Roman Catholic, a state arsenal, two banks, an insurance company, 45 stores, five woollen-factories, one cotton-factory with 1000 spindles, one paper-mill, four grist-mills, four tanneries, one brewery, three printing-offices, three weekly newspapers; 19 schools, 1192 scholars. Pop. 5027.

**WATERVILLE, p. t.**, Kennebec co., Me., 18 m. N. Augusta, 613 W. Bounded E. by Kennebec river, which has here a fall of 18 ft., affording an immense water-power. Emerson's stream, which flows into Kennebec river, has the highest fall in the state, and affords good water-power. The great water-power here concentrated is but partially improved. The Kennebec is navigable from this place to Augusta for boats of 40 tons. It has four churches, 39 stores, two fulling-mills; one college, 94 students; two academies, 262 students, 19 schools, 1274 scholars. Pop. 2971. It is the seat of Waterville college, under the direction of the Baptists, founded in 1820, which has a president and six professors or other instructors, 210 alumni, of whom 70 have been ministers of the gospel, 70 students, and 7000 vols. in its libraries. The commencement is on the second Wednesday in August. It has two edifices containing rooms for students, a chapel, and a commons hall.

**WATERVLIET, p. t.**, Albany co., N. Y., 5 m. N. Albany, 375 W. Bounded N. by Mohawk river, E. by Hudson river. It contains several islands formed by the mouths of the Mohawk. The Erie and Champlain canals here separate, and in the former is a succession of locks to overcome the falls of the Cahoes. At West Troy village is the United States arsenal. (*See Troy*). There are in the town 94 stores, four lumber yards, three fulling-mills, three woollen-factories, two cotton-factories, with 5160 spindles, two flouring-mills, 10 grist-mills, 12 saw-mills, one paper-mill, one brewery, four potteries, one printing-office, one weekly newspaper; 13 schools, 1600 scholars. Pop. 10,141.

**WATFORD, a market town and par.** of England, co. Herts, hund. Cassio; on the Colne, here crossed by a bridge, 10 m. N.W. London. Area of par., including besides Watford four adjacent hamlets, 10,980 acres. Pop. of do. in 1831, 5293; and of the town 2960. The latter, which is well built, consists principally of a main street, about 1 m. in length, on the high road from London to Birmingham. The church, in the centre of the town, is a large edifice, consisting of a nave, three aisles, and a chancel; it has, at the W. end, a massive embattled tower, 80 feet in height, surmounted by a small spire rising about 20 feet higher. It has some fine monuments, especially two by Nicholas Stone. The living, a valuable vicarage, worth £730 a year, is in the gift of the earl of Essex. Here, also, are chapels for Baptists and Wesleyans. The educational establishments comprise a free school, founded in 1704, for 40 boys and 14 girls, with an income of about £180 a year, which, in 1832, afforded instruction to 60 scholars; another free school, with a small endowment, established in 1641; a national school supported by subscription, &c.: the funds for the general charities yielded, at the date of last inquiry, an income of nearly £850 a year. Next to agriculture, the chief branches of industry pursued here are the spinning and winding of silk, straw plaiting, and malting. In 1838, there were two silk mills at work in the parish, which furnished employment for 320 hands. There are some very extensive paper-mills on the Colne, in the vicinity; and Watford is a considerable market for corn, sheep, cattle, and hogs. Its trade in these is facilitated by the Grand Junction canal, which passes about 2 m. W. of the town, where it is joined by the Colne, which has been rendered navigable to St. Alban's. The London and Birmingham railway has a station immediately to the E. of Watford, near which the line passes through a tunnel 1930 yards in length. A council of magistrates, and a court of requests for the recovery of small debts, are held in the town weekly. Markets on Tuesdays; and fairs four times a year for cattle, horses, pedlery, and the hiring of servants. Adjoining Watford on the W. is Cashiobury park, the seat of the earl of Essex, lord of the manor. The house has a good deal of the appearance of a monastery; it has some good pictures, and a valuable collection of books. (*Private Information*.)

**WATSON, p. t.**, Lewis co., N. Y., 10 m. N.E. Martinsburg, 140 m. N.W. Albany, 439 W. Bounded W. by Black river. It has one store, 12 saw-mills; 17 schools, 354 scholars. Pop. 1707.

## WAYNE.

**WAWARSING, p. t.**, Ulster co., N. Y., 22 m. S.W. Kingston, 82 m. S.S.W. Albany, 297 W. Drained by Rondout creek and its tributaries. Iron ore, plumbago, and some lead are found here. It has 17 stores, eight fulling-mills, 11 woollen factories, one cotton factory with 2136 spindles, one glass-house, three grist-mills, 43 saw-mills, six tanneries, one pottery; 20 schools, 924 scholars. Pop. 4044.

**WAYNE, county, N. Y.** Situated in the N. part of the state, and contains 572 sq. m. Bounded N. by lake Ontario. Canandaigua outlet, after receiving Mud creek at Lyons, becomes Clyde river. It contains gypsum, marl, water limestone, and several sulphur springs. It had, in 1840, 33,298 neat cattle, 100,986 sheep, 44,130 swine; and produced 571,083 bushels of wheat, 4460 of rye, 338,356 of Indian corn, 32,002 of buckwheat, 25,087 of barley, 482,900 of oats, 512,710 of potatoes, 159,554 pounds of sugar. It had 115 stores, four furnaces, one forge, 11 fulling-mills, 12 flouring-mills, 25 grist-mills, 118 saw-mills, two glass-houses, one rope-walk, 25 tanneries, six distilleries, one brewery, four printing-offices, four weekly newspapers; eight academies, 475 students; 183 schools, 9637 scholars. Pop. 42,057. Capital, Lyons.

**WAYNE, county, Pa.** Situated in the N.E. part of the state, and contains 648 sq. m. Bounded N.E. by Delaware river. Drained by Lackawaxen creek and its branches. It contained in 1840, 17,412 neat cattle, 34,371 sheep, 3122 swine; and produced 15,210 bushels of wheat, 11,041 of rye, 10,323 of Indian corn, 36,555 of buckwheat, 3740 of barley, 102,140 of oats, 156,702 of potatoes, 9940 pounds of sugar. It had 28 stores, three fulling-mills, one glass-house, one flouring-mill, 14 grist-mills, 68 saw-mills, one oil-mill, two printing-offices, two weekly newspapers; three academies, 96 students; 97 schools, 2424 scholars. Pop. 11,843. Capital, Honesdale.

**WAYNE, county, N. C.** Situated S.E. of the centre of the state, and contains 720 sq. m. Watered by Neuse river and its branches. It contained in 1840, 8492 neat cattle, 6269 sheep, 46,594 swine; and produced 12,744 bushels of wheat, 1443 of rye, 461,155 of Indian corn, 9855 of oats, 90,006 of potatoes, 402,175 pounds of cotton. It had 12 stores, 49 grist-mills, 25 saw-mills; four academies, 129 students; six schools, 213 scholars. Pop.: whites, 6754; slaves, 3673; free coloured, 464; total, 10,891. Capital, Waynesboro'.

**WAYNE, county, Ga.** Situated in the S.E. part of the state, and contains 900 sq. m. Bounded N.E. by Alachua river. Watered by Santailla river. It contained in 1840, 7534 neat cattle, 404 sheep, 3933 swine; and produced 16,321 bushels of corn, 15,125 of potatoes, 19,183 pounds of cotton, 3465 of sugar. It had three stores, one grist-mill; one academy, 12 students. Pop.: whites, 877; slaves, 367; free coloured, 14; total, 1258. Capital, Wayne, C. H.

**WAYNE, county, Miss.** Situated in the E. toward the S. part of the state, and contains 790 sq. m. Drained by Chickasawha river and its branches. It contained in 1840, 10,397 neat cattle, 927 sheep, 7671 swine; and produced 5323 bushels of Indian corn, 9134 of potatoes, 334,689 pounds of cotton. It had two stores, one tannery. Pop.: whites, 1141; slaves, 979; total, 2120. Capital, Winchester.

**WAYNE, county, Tenn.** Situated in the S. toward the W. part of the state, and contains 504 sq. m. Bounded N.W. by Tennessee river. Drained by Buffalo creek and its branches, and branches of Shoal creek. It contained in 1840, 8490 neat cattle, 5004 sheep, 34,351 swine; and produced 27,406 bushels of wheat, 1722 of rye, 426,560 of Indian corn, 1732 of buckwheat, 32,718 of oats, 6982 of potatoes, 17,518 pounds of tobacco, 39,382 of cotton, 6754 of sugar. It had nine stores, one furnace, one forge, 17 grist-mills, two saw-mills, one tannery, 19 distilleries, one pottery; one school, 29 scholars. Pop.: whites, 7151; slaves, 529; free coloured, 25; total, 7705. Capital, Wanesboro'.

**WAYNE, county, Ky.** Situated in the S. toward the E. part of the state, and contains 570 sq. m. Bounded N. by Cumberland river, by the S. fork of which, and by other tributaries, it is drained. It contained in 1840, 18,032 neat cattle, 15,382 sheep, 46,016 swine; and produced 48,888 bushels of wheat, 7408 of rye, 752,904 of Indian corn, 86,405 of oats, 12,270 of potatoes, 5060 pounds of tobacco, 3000 of cotton, 3550 of sugar. It had 18 stores, three flouring-mills, 16 grist-mills, three saw-mills, one oil-mill, two tanneries, 11 distilleries; seven schools, 172 scholars. Pop.: whites, 6754; slaves, 630; free coloured, 15; total, 7399. Capital, Monticello.

**WAYNE, county, O.** Situated N.E. of the centre of the state, and contains 660 sq. m. Watered by Killbuck river, and by lake fork of Mohican creek, Sugar and Chippewa creeks. It contained in 1840, 20,614 neat cattle, 48,563 sheep, 55,999 swine; and produced 753,621 bushels of wheat, 49,668 of rye, 395,030 of Indian corn, 542,965 of oats, 132,003 of potatoes, 177,092 pounds of sugar. It had 68 stores, four fulling-mills, two woollen factories, 23 flouring-mills, 17 grist-mills, 81 saw-mills, six oil-mills, 27 tanneries,

seven distilleries, three breweries, one pottery, two printing-offices, two weekly newspapers; one academy, 25 students; 10 schools, 278 scholars. Pop.: 35,808. Capital, Wooster.

WAYNE, county, Mich. Situated in the S.E. part of the state, and contains 600 sq. m. Drained by Rouge and Huron rivers and their branches, flowing into Detroit river, which bounds it on the W. Limestone, iron ore, and sulphur springs are found. It contained in 1840, 14,574 neat cattle, 10,181 sheep, 17,092 swine; and produced 89,769 bushels of wheat, 5575 of rye, 138,739 of Indian corn, 4975 of barley, 94,981 of oats, 204,313 of potatoes, 122,667 pounds of sugar. It had 11 commission houses in foreign trade, 141 retail stores, five furnaces, eight flouring-mills, three grist-mills, 28 saw-mills, three tanneries, one distillery, two breweries, three potteries, three printing-offices, three daily and four weekly newspapers; one college, 30 students; one academy, 40 students; 72 schools, 3097 scholars. Pop. 24,173. Capital, Detroit.

WAYNE, county, Ia. Situated in the E. part of the state, and contains 420 sq. m. Drained by branches of White-water river, which afford good water-power. It contained in 1840, 13,768 neat cattle, 28,173 sheep, 35,413 swine; and produced 124,705 bushels of wheat, 2938 of rye, 882,477 of Indian corn, 284,437 of oats, 21,412 of potatoes, 66,116 pounds of sugar. It had 63 stores, three furnaces, four fulling-mills, 10 flouring-mills, 37 grist-mills, 41 saw-mills, three oil-mills, one paper-mill, 14 tanneries, 14 distilleries, one brewery, three potteries, three printing-offices, three weekly newspapers; six academies, 315 students; 51 schools, 5079 scholars. Pop. 23,292. Capital, Centerville.

WAYNE, county, Ill. Situated toward the S.E. part of the state, and contains 720 sq. m. Drained by Elm river and by Skillet fork of Little Wabash river. It contained in 1840, 7801 neat cattle, 5163 sheep, 19,713 swine; and produced 17,515 bushels of wheat, 1443 of rye, 247,880 of Indian corn, 60,471 of oats, 10,997 of potatoes, 60,610 pounds of tobacco, 7784 of cotton, 3345 of sugar. It had 10 stores, five flouring-mills, seven grist-mills, four saw-mills, one oil-mill, four tanneries; 15 schools, 372 scholars. Pop. 5133. Capital, Fairfield.

WAYNE, county, Mo. Situated in the S.E. part of the state, and contains 1200 sq. m. Watered by St. Francis and Big Black rivers. It contained in 1840, 5849 neat cattle, 3084 sheep, 25,871 swine; and produced 12,940 bushels of wheat, 160,165 of Indian corn, 20,980 of oats, 3478 of potatoes, 22,434 pounds of tobacco, 6849 of cotton, 23,224 of sugar. It had 17 stores, 15 grist-mills, one saw-mill, one tannery, eight distilleries; 13 schools, 234 scholars. Pop.: whites, 3060; slaves, 322; free coloured, 12; total, 3403. Capital, Greenville.

WAYNE, p. t., Kennebec co., Me., 15 m. W. Augusta, 595 W. Watered by part of Androscoggin Great pond. Incorporated in 1798. It contains five stores, one fulling-mill, one furnace, two grist-mills, six saw-mills; one academy, 13 students; nine schools, 445 scholars. Pop. 1201.

WAYNE, p. t., Steuben co., N. Y., 198 m. W. by St. Albany, 316 W. Bounded W. by Crooked lake. It contains three stores, one oil-mill, one tannery; 10 schools, 522 scholars. Pop. 1377.

WAYNE, t., Mifflin co., Pa. Watered by Juniata river. It has four stores, one fulling-mill, one furnace, two grist-mills, eight saw-mills; eight schools, 297 scholars. Pop. 1350.

WAYNE, t., Schuylkill co., Pa. It has two grist-mills, 24 saw-mills, two tanneries; Pop. 1621.

WAYNE, t., Belmont co., O. Captina creek affords water-power. Pop. 1734.

WAYNE, t., Champaign co., O. Drained by branches of Little Darby creek and Mad river. It has one store, one fulling-mill, one woollen factory, two saw-mills; four schools, 98 scholars. Pop. 1300.

WAYNE, t., La Fayette co., O. Drained by Paint creek. It has one store, two grist-mills, two saw-mills; 14 schools, 350 scholars. Pop. 1540.

WAYNE, t., Jefferson co., O. Drained by Cross creek. It has two stores, two flouring-mills, one grist-mill, three saw-mills, two tanneries; six schools, 320 scholars. Pop. 1746.

WAYNE, t., Warren co., O. Watered by Little Miami river and its branches. It has eight schools, 636 scholars. Pop. 3392.

WAYNE, t., Tuscarawas co., O. It has one fulling-mill, four grist-mills, eight saw-mills, two distilleries; 13 schools, 844 scholars. Pop. 2142.

WEAKLY, county, Tenn. Situated in the N.W. part of the state, and contains 680 sq. m. Drained by Obion river and its branches. It contained in 1840, 9931 neat cattle, 5882 sheep, 24,085 swine; and produced 44,229 bushels of wheat, 1246 of rye, 454,248 of Indian corn, 64,421 of oats, 22,849 of potatoes, 462,966 pounds of tobacco, 24,167 of cotton. It had 11 stores, two flouring-mills, 10 grist-mills, nine saw-mills, two tanneries, six distilleries, one printing-office, one weekly newspaper; four academies, 117 students; 14

schools, 295 scholars. Pop.: whites, 8072; slaves, 1796 free coloured, 2; total, 9870. Capital, Dresden.

WEARE, p. t., Hillsborough co., N. H., 14 m. S.W. Concord, 475 W. Drained by a branch of Piscataquog river. Incorporated in 1764. It has three churches, a Baptist, Free-will Baptist, and Universalist, five stores, four fulling-mills, one woollen factory, one cotton factory with 764 spindles, seven grist-mills, 12 saw-mills, four tanneries; one academy, 50 students; 26 schools, 734 scholars. Pop. 2375.

WEARMOUTH. See SUNDERLAND.

WEATHERSFIELD, p. t., Windsor co., Vt., 74 m. S. by E. Montpelier, 464 W. Bounded E. by Connecticut river. Watered by Black river. It contains four churches, two Congregational, a Methodist, and a Union, six stores, three fulling-mills, three woollen factories, three grist-mills, nine saw-mills, two tanneries; 12 schools, 703 scholars. Pop. 2081.

WEBSTER, p. t., Worcester co., Mass., 56 m. W.S.W. Boston, 394 W. Watered by French river, which affords good water-power. It contains two churches, a Methodist and Baptist, four stores, one woollen factory, five cotton factories, with 9100 spindles, two grist-mills, two saw-mills; four schools, 278 scholars. Pop. 1403. A remnant of the Nipmuck Indians reside here.

WEBSTER, p. t., Monroe co., N. Y., 214 m. W. by N. Albany, 371 W. Bounded N. by lake Ontario. It has two stores; 15 schools, 747 scholars. Pop. 2235.

WEDNESBURY, a market town and par. of England, co. Stafford, hund. Offlow, near the source of the Tame, in the great coal and iron district of which Birmingham is the centre, 7 m. N.W. Birmingham. Area of par., 2190 acres. Pop. of do., in 1831, 8437. The church, which stands on a hill, and is supposed to occupy the site of an ancient castle, repaired within these few years, is a fine structure, with a tower surmounted by a lofty spire. It has an octagonal E. end, and other portions in the perpendicular style, and within are some exquisitely carved prebendal altars, and a curious moveable reading-desk. (*Rickman*.) The living, a vicarage worth £300 a year, is in the gift of the crown. Here are chapels for Independents and Wesleyans; a Lancastrian school, supported by subscription; a small endowed school for poor children, an almshouse, and some minor charities.

The inhabitants are mostly employed in various branches of the hardware manufacture, especially in the production of the numerous articles included under the term saddlers' ironmongery, with nails, hinges, edge-tools, and cast-iron works of almost every description. Enamel painting is also extensively carried on; and it has a soap manufactory, which produced, in 1839, 2,971,221 lbs. hard soap. A valuable potter's earth is obtained in the vicinity; in which are, also, several corn mills. A branch of the Birmingham canal approaches within a short distance of the town on the one hand, and the Grand Junction railway on the other. The local authority is vested in a constable chosen at the manorial court, held here annually; a court of requests is opened occasionally, for the recovery of debts under £5. Market day, Wednesday; fairs, twice a year, for cattle and pedlery.

WEEDSPORT, p. v., Brutus t., Cayuga co., N. Y., 7 m. N. Auburn, 155 W. Albany, 341 W. It is a flourishing village on the Erie canal.

WEIMAR-EISENACH (GRAND DUCHY OF SAXE), a state of central Germany, the most important of the minor Saxon states, consisting of several detached portions of territory, inclosed on different sides by the dominions of Prussia, Hesse-Cassel, Bavaria, the kingdom of Saxony, the duchies of Coburg, Meiningen, &c., the capital being in lat. 50° 39' 12" N., long. 11° 21' E. Total area estimated at 1416 sq. m. Pop. in 1839, 247,603, all Protestants, except about 10,300 Roman Catholics, and 1400 Jews. The principality of the Saxe-Weimar is subdivided into the circles of Weimar-Jena, and Neustadt; that of Eisenach in the W. forms a circle of itself. The greater part of the country belongs to what is called the *Thüringervald*, or Thüringian forest, and to the basins of the Elbe and Weser; its principal rivers being the Ilm, Saale, White Elster, and Unstrut. Agriculture is the principal occupation of the inhabitants; the soil, consisting of a clayey loam upon a calcareous basis, is moderately fertile. Owing to the minute subdivision of the land the occupiers are for the most part poor. Mr. Jacob says that they live harder than day labourers, and that, despite their industry and economy, they are unable to increase their resources. (*View of Germany*, 328.) The country had not then, however, fully recovered from the devastation produced by the late war, and it is now a good deal improved. In the vicinity near Weimar the soil is a rich black mould, producing, notwithstanding its defective culture, very superior crops. The villages in this part of the duchy are thickly placed and populous, but, in consequence of the smallness of the farms, there is a great scarcity of cattle. Of late years, however, the rearing of cattle has been a good deal more attended to; and

## WEIMAR.

the stock of sheep has been greatly increased in consequence of the ready and advantageous market for wool afforded in England. Game is extremely plentiful; and the woods comprise about one million Prussian *morgen* of land. Most of the peasants' houses are built of timber.

Coal and salt are both raised, the former in no great quantities, but the production of the latter, at Kreützberg, may amount to 1,100,000 lbs. a year. Iron and manganese are the chief metallic products. Manufactures are not very important; woollen cloths, carpets, hosiery, linen stuffs, iron, hardware, and tobacco-pipes, are the principal products. There are a good many breweries and distilleries. Manufacturing industry is most active in the circle of Eisenach.

The government is a limited monarchy; and the royal family of Weimar took the lead in Germany after the peace, in introducing a free representative system into their dominion. The constitution dates from 5th May, 1816, and is certainly one of the most liberal in Germany. "The miniature parliament forms only one house, for it consists of only 31 members; 10 are chosen by the proprietors of estates-noble, 10 by the citizens of the towns, 10 by the peasantry, and one by the university of Jena. The last is elected by the *Senatus Academicus*; and, besides being a professor, must have taken a regular degree in the juridical faculty. At the general election, which occurs every 7th year, not only the representatives themselves are chosen, but likewise a substitute for every member, that the representation may be always full. The 10 members for the nobility are chosen directly by all the possessors of patents of nobility, or estates-noble. Even ladies in possession of such estates have a vote; but if unmarried, they must vote by proxy.

"In the representation of the towns and peasantry, the election is indirect. The towns are distributed into 10 districts, each of which sends one member. In these, every resident citizen has a vote, without distinction of religion; even Jews possess the franchise, though they cannot be elected. The whole body of voters in a town choose a certain number of delegates, in the proportion of 1 for every 50 houses the town contains, and these deputies elect the member for the district. The member for a district of towns must have a certain independent income of about £75 sterling, if he be elected for Weimar or Eisenach, and £45 if chosen to represent the towns of any other district. The election of the 10 representatives of the peasantry proceeds in a similar way. Their representatives must belong to themselves; they are not allowed to take them from the higher classes of landed proprietors, which they certainly would have been easily brought to do, had it not been expressly prohibited. Neither brothers, nor father and son, are capable of sitting in the chamber at the same time. The parliament elects its own president, whose election is confirmed by the grand duke, and who holds office during two parliaments. Regularly the chamber meets only once in three years, and the budget is voted for the whole of that period; but a standing committee of nine members continues during the adjournment. During the session the members have an allowance of about 10s. a day, besides a certain sum per mille for travelling expenses. The powers of the chamber extend to all the branches of legislation, and its consent is indispensable to the validity of all legislative measures. The majority of voices determines every question. The members have full privilege of parliament; their persons are inviolable from the commencement till eight days after the close of the session: they are secured in liberty of speech, and legal proceedings cannot be instituted against them without the consent of the chamber." (*Russell*, i., 111-117.)

The ministry is in three-departments, those of justice, finance, and public instruction. There are courts of primary jurisdiction in the principal towns, and courts of appeal in Weimar and Eisenach, in which, with Weida and Dornbach, are also criminal courts; all having appeal to the supreme court of Jena, which is also the supreme tribunal for the states of Saxe-Coburg, Meiningen, and Reuss. According to Berghaus, public education is nowhere in Germany so widely diffused, and so well attended to, as in Saxe-Weimar. In 1830, 35,285 children were receiving public instruction. According to the budget for 1839-41, the revenue of the Grand Duchy amounts to 773,093 *thalers*, and the expenditure to 664,748 do.: the public debt amounts to 3,500,000 *thalers*. The contingent to the army of the confederation consists of 2100 men, all persons being liable to service from their 20th to 25th year. Saxe-Weimar holds the 15th place in the confederacy; having one vote in the full diet, and with Saxe-Coburg, Meiningen and Altenburg, one in the committee.

WEIMAR, a city of central Germany, cap. of the above Grand Duchy, and the usual residence of the grand duke, on the Ilm, an affluent of the Saale, 104 m. W. by S. Dresden, 116 m. S.E. Hanover, and 136 m. S.W. Berlin. Pop., 1054

## WELLINGBOROUGH.

in 1838, 11,212. The city, which is partially surrounded with walls, though irregularly laid out, has several good and clean streets, and handsome houses; and deserves to rank with German towns of the second order. The Ilm, which flows along its E. side, is crossed by three bridges; it traverses the centre of the ducal park, the chief promenade of the inhabitants; and has on or near its W. bank, the ducal palace and mews, the riding-house, *rothe schloss* or red castle, public library, and several other public buildings. The ducal residence is a good building, and is tastefully furnished; but comfort rather than magnificence was the object of the late grand duke, by whom it was built. The town church has a large organ; an altar-piece of the Crucifixion, by Luke Cranach, in which are introduced portraits of his friends Luther and Melancthon, and of himself; and monuments to Herder, and numerous members of the ducal family interred here. In the park is a handsome temple containing some beautiful arabesques, and a portrait by Angelica Kauffmann. An avenue from this promenade conducts to the Belvidere, a summer palace of the grand duke, about 2 m. distant.

If Dresden be the Florence, Weimar was once fairly entitled to be called the Athens of Germany; having been the residence of Wieland, Schiller, Goethe, Herder, &c., invited thither by the late grand duke. Goethe and Schiller are buried in the new cemetery, one on each side their patron. During their superintendence, the theatre at Weimar was among the most celebrated in Germany; and its opera is still very well conducted and supported, the inhabitants of the city being great lovers of music. The grand ducal library holds a high rank, and has 96,000 printed volumes, besides MSS. (*Statist. Journ.*, 1841.) It is open to the public, who are even allowed the use of the books at their own houses. In this library are some fine busts, and some paintings by A. Dürer. One of the principal objects of notice in Weimar is the *Landes-Industrie-Comptoir*, a vast printing and publishing establishment, in which a great number of persons are employed in translating such foreign works as are likely to be read in Germany; "and such is the rapidity with which this office is performed, that frequently the translation of a book published in London at the beginning of one month is in full circulation by the end of the same month throughout Saxony, and the Independent states of Germany, from the press of the *Industrie-Comptoir*." (*Granville's Trav.*, i., 222.) From this press issues the *Weimar Almanac*, frequently quoted in this work. Weimar is the seat of nearly all the superior educational institutions of the grand duchy. It has a famous academy attended by young English gentlemen, several hospitals, an orphan asylum, central prison, &c. The manufactures of Weimar are inconsiderable: a few woollen and linen cloths, iron-ware, paper, and beer are the principal products. The town has some trade in corn and wool. Weimar was the birth-place of Kotzebue. (*Berghaus, Allg. Länder, &c.*, iv.; *Stein's Handbuch*; *Russell, Jacob, and Granville's Trav.*, &c.)

WEISENBURG, t., Lehigh co., Pa., 72 m. E. by N. Harrisburg, 180 W. Watered by Jordan creek and its tributaries. It contains two churches, two stores, six grist-mills, three saw-mills, four tanneries, 15 distilleries; four schools, 111 scholars. Pop. 1427.

WELD, p. t., Franklin co., Me., 47 m. W.N.W. Augusta, 624 W. Watered by a large pond and its inlets; and its outlet, which flows S. into Androscoggin river. It has one store, three grist mills, four saw-mills; 11 schools, 425 scholars. Pop. 1045.

WELDON, p. v. Halifax co., N. C., 95 m. N.E. Raleigh, 204 W. Situated on the S.W. side of Roanoke river, at the great falls, 12 m. above Halifax. Below the falls the river is navigable to Albemarle sound. There is a canal around the falls, 12 m. long, with a lockage of 100 ft. Above the falls the Roanoke is made boatable to Staunton river, over 200 m. A railroad extends from this place to Petersburg, Richmond, and Fredericksburg, Va. Another proceeds 161 m. to Wilmington, whence steamboats ply 180 m. to Charleston, S. C.

WELFLEET, p. t., Barnstable co., Mass., 105 S.E. Boston, 506 W. Situated on cape Cod, and extending across it, about half way between the elbow and the N. point. Bounded E. by the Atlantic, W. by Cape Cod bay. Welfleet bay sets up from Cape Cod bay in the S.E. part of the town, and forms a good harbour, protected by several islands at its mouth. It has considerable shipping employed in the coasting trade, and the cod and mackerel fisheries. It has two Congregational churches, 15 stores, two grist-mills, one tannery; 10 schools, 640 scholars. Salt is extensively manufactured. Pop. 2377.

WELLINGBOROUGH, a market town and par. of England, co. Northampton, hund. Hamfordshire, on the slope of a hill, 10 m. N. E.N.E. Northampton. Area, of par., 4490 acres. Pop. of do., in 1831, 4688. The town, which was a place of some consequence in the time of the Saxons,

## WELLINGTON.

consists principally of four streets, meeting in a market-place. The houses are built of red sandstone, and the town having been almost wholly destroyed by a tremendous fire in 1738, has now a comparatively modern appearance. The church, a large edifice, with a tower and spire, is, like most churches in this county, of a mixed style. It is, however, richly decorated with carved work; in its E. window is some stained glass, and on each side of the chancel are three stalls like those in cathedral choirs. The living, a vicarage worth £400 a year, is in the gift of — Vivian, Esq. Here, also, are places of worship for Baptists, Friends, Wesleyans, &c. The free school, founded by Edward VI., has an income of £112 a year, and is open to all boys belonging to the parish. The number varies from 12 to 20; who are taught Latin gratis, but who pay £1 ls. a quarter for English, writing, and arithmetic. The governors are the trustees of the town estate; the right of appointing the master and usher is vested in the inhabitants paying taxes. (*Digest of Charity Repts.*) The town estate, yielding an income of £350 a year, partly supports the free school; and the usher's salary, with a charity school for the primary instruction of 50 children, is partly dependent on Fisher's endowment of £137 10s. a year. There are several charities for supplying bread to the poor, &c. The manufacture of boots and shoes was carried on very extensively in this town during the war, and, though fallen off, still continues to be its staple business. The corn market, on Wednesdays, is considerable.

Wellington derived its name from the wells or mineral springs around it, which formerly enjoyed such celebrity that, in 1626, Charles I. and his queen resided here in tents for a considerable period that they might drink the waters pure from their source. The county magistrates hold petty sessions for the division weekly in the townhall. Fairs, Easter and Whit Wednesday, and Oct. 29, for live stock and cheese.

WELLINGTON, a market town and par. of England, co. Salop, head of a div. of Bradford hundred, on the ancient Watling-street, 10 m. E. Shrewsbury. Area of par., which, besides the town, includes six townships, 7950 acres. Pop. of do., in 1831, 9671. The town consists mostly of narrow streets; but, of late years, these have been lighted with gas, and otherwise much improved, and are mostly lined with well built houses. The parish church is a handsome structure of freestone with cast-iron pillars, the window frames being also of iron. The living, a vicarage conjoined with the rectory of Eytton, worth £842 a year, is in the gift of — Eytton, Esq. (*Eccles. Rev. Rep.*) Here are several dissenting places of worship, free and national schools, and some almshouses and several minor charities. Near the town are some chalybeate and sulphureous springs, frequented by visitors. Most of the inhabitants of the parish are employed in working coal and iron mines, and limestone quarries; and there are in the parish many smelting furnaces, wrought by machinery, with nail-works, glass-works, &c. Malting and some trade in timber are also carried on. The town is governed by a mayor and two constables, appointed annually at a manorial court, who hold petty sessions weekly, and a court of record for debts under £20 at specified times. Market-day, Thursday. Fairs four times yearly, for cattle and stock.

WELLINGTON, a market town and par. of England, co. Somerset, hund. Kingsbury West, on the high road from Bath to Exeter, 46 m. S.W. the former. Area of par. 4830 acres. Pop. of ditto in 1831, 4762. The town is regularly laid out, and has been mostly rebuilt during last century: it principally consists of two spacious thoroughfares, crossing each other at right angles, the main street being about  $\frac{1}{2}$  m. in length. The church at the N. entrance is a handsome structure of mixed architecture, 110 ft. in length, and 50 ft. in breadth, comprising a nave, chancel, two aisles, and two small chapels. At its W. end is a fine embattled tower, 100 ft. in height, crowned with a turret and pinnacles. Within are several monuments, including a magnificent tomb in honour of Sir John Popham, chief justice of England in the reign of Elizabeth, and a great benefactor of the town, and a new altar-piece, ranking among the finest in the W. of England. The living, a very valuable vicarage, worth £894 a year, is in the gift of W. P. Thomas, Esq. A very elegant chapel of ease, of Grecian architecture, has been erected at the S. extremity of the town by the Rev. N. P. Thomas; and there are chapels for Baptists, Independents, Wesleyans, and Friends, the latter being here a very numerous sect. Several schools are attached to the various meeting-houses, and there are endowed almshouses for both sexes, founded by Sir John Popham, with some minor charities. A new market-house, over which is the town-hall, was erected in the centre of the town in 1832.

Wellington had formerly a flourishing manufacture of woollen goods, but it is now much fallen off. It still, however, produces druggists and serges, and has a small manu-

## WELLS.

facture of earthenware. In 1838 there were in the parish three woollen-mills at work, furnishing employment to 293 hands. The corn market on Thursday is large and well attended. The Bath and Exeter railway will, when completed, pass close to the E. of the town. Wellington is governed by a bailiff and subordinate officers chosen at the annual manorial court.

This town enjoys the distinction of having successively conferred on Arthur Wellesley (third surviving son of the second earl of Mornington), the greatest of English generals, the titles of viscount, earl, marquis, and duke. An obelisk upwards of 120 ft. in height has also been erected, in honour of the illustrious duke, on a lofty hill about 3 m. S.E. from the town. (*Beauties of England and Wales*, art. Somerset: *Prio. Inf.*)

WELLS, a city, and a par. and mun. bor. of England, co. Somerset, hund. Wells Forum, at the S. foot of the Mendip hills, 17 m. S.W. Bath. It is situated in the centre of the large parish of St. Cuthbert, which contains numerous hamlets, and has an area of about 14,000 acres, with, in 1831, a pop. of 6649. The parliamentary and municipal borough, which are now co-extensive, do not however, include the whole parish of St. Cuthbert, but comprise only the old city, the liberty of St. Andrew, and some additional portions, having, in 1841, a population of 4603. The city consists mostly of four principal streets, named from the four verderies into which it is divided. They are well paved and lighted, and have many good houses. The market-place, an extensive area, communicating by an ancient gateway with the cathedral-close, has in it the town-hall and a handsome public conduit, by which the city is well supplied with water. The great objects of interest in Wells are its fine ecclesiastical edifices. The cathedral, at the E. extremity of the city, is not only one of the most perfect in its original plan, but is more complete as respects its appendages, than any other in the kingdom. It was principally designed in the early part of the reign of Henry III. It is built in the form of a cross, from the intersection of which rises a large quadrangular tower 178 ft. in height. The W. front, 150 ft. in breadth, is flanked by two smaller towers, each 130 ft. in height: the total length of the church, from E. to W., is about 380 ft.; its breadth, 131 ft. "The situation of this edifice and the adjoining palace is beautiful; and though no whole side, except the W. front is visible in any one view, the cathedral is well displayed from several points, particularly the N.W. As at Peterborough, the palace and several other buildings adjoin the cathedral, and add much to its general appearance. The character of a large portion of the building is early English, with portions of the two later styles, which are very beautifully accommodated in their forms to the older parts. The nave and transepts, and part of the towers, are early English: the W. front is remarkably rich in niches and statues, and not less so in shafts and other small ornaments appropriate to the style. The lower parts of the sides of the western towers are similarly enriched, but the whole of the remaining exterior of the building is rather plain than otherwise; the upper parts of all the towers are much later than the lower, and much accommodated to the earlier portions as to lines and forms. The eastern part of the cross and the chapter-house are of decorated character, and remarkably elegant. The cloisters are perpendicular: the nave and transepts, and a N. porch out of the nave, present an early English arrangement very remarkable for simplicity and elegance. There are various excellent portions of stone screen-work, chapels, and monuments, and some stained glass, the effect of which is peculiarly good. This cathedral is very rich in details of the best as well as the most singular kinds, and, in point of composition, some of its best parts yield to no edifice in the kingdom. The bishop's palace, though it has been altered, and in some parts much modernized, contains some fine portions, an early decorated chapel, and some parts of earlier date. Taken altogether, the palace is one of the most valuable remains in the kingdom. The gates and other buildings in the precincts of the cathedral deserve careful examination." (*Rickman*.) Wells was first erected into a bishop's see in 905. In the 12th century it was united to the abbey-church at Bath; but the writ of *congé d'élire* for the election of the bishop is still addressed to the dean and chapter of Wells. The chapter consists of a dean and six other canons, four priest-vicars, and 42 prebendaries. Wolsey and Laud were bishops of this see. St. Cuthbert's church is a handsome perpendicular edifice: but its principal feature is its tower, one of the finest of the kind. The living, a vicarage in the gift of the dean and chapter of Wells, is worth £564 a year. There are, also, places of worship for Independents, Baptists, and Wesleyans. Here is a collegiate school, under the patronage of the dean and chapter, and a united charity school, founded in 1654, which affords instruction, clothing, &c., to 34 boys and 20 girls, and has an income of £514 a year. Under the town-hall is a hospital, founded

## WELLSBURG.

and endowed in the 15th century, for aged men and women, which has now an income of above £350 a year, and 30 inmates. There are numerous other charities, including several well-endowed almshouses. Several manufactures that were formerly carried on in the town have either ceased altogether or have greatly declined; and that of silk has been wholly given up. It is said in the *Parliamentary Boundary Report*, that "no trade or manufactures are carried on in the town. It probably has been for a great number of years in the same state as it is now. There is no reason to believe that it will increase. Much of the property of the city belongs to the ecclesiastical or the city corporations, which cannot grant long leases, and give no encouragement to building." The corn-market, which used to be very considerable, has materially declined; but the market for cheese is still one of the most considerable in the W. of England. The trade of the place is mostly, however, confined to the retail supply of the inhabitants. The West of England and South Wales District bank has an office in the city. The earliest charter of Wells dates from the 3d of John, but the governing charter, previously to the Municipal Reform Act, was granted by Elizabeth. By the last-mentioned statute, the town is governed by a mayor, three other aldermen, and 12 councillors. A court of quarter sessions, the jurisdiction of which is confined to cases of misdemeanour, is held four times a year; but it is merely a matter of form, all trials being referred to the county assize-court, and the court of record has also fallen into disuse. The county assizes are held alternately here and at Taunton. Corporation revenue in 1840, £898. Wells has returned two members to the House of Commons since the reign of Edward I., the right of voting, down to the Reform Act, having been vested in the mayor, masters, burgesses, and persons admitted to the freedom of the city, which was obtainable by birth, marriage, or apprenticeship. Registered electors in 1839-40, 414. It is also a polling-place for the E. division of the county. Markets, Wednesday and Saturday; and every fourth Saturday a large market for corn, cattle, and cheese. Fairs five times a year, mostly for cattle, horses, and pedlery. (*Parl. and Mun. Bound. Reps.; Mun. Corp. Append.*)

WELLS, a seaport town and par. of England, co. Norfolk, hund. N. Greenhoe, on a small creek, about 1 m. from the sea, 23 m. N.W. Norwich. Area of par., 2250 acres. Pop. of ditto in 1831, 3624. The town consists principally of two streets, only partially paved. The parish church, a spacious edifice built mostly of flint, with a lofty embattled tower, has some curious sculpture and paintings. The living, a valuable rectory, being worth £785 a year, is in the gift of —Hopper, Esq. Here are several dissenting chapels: a free school for 60 poor children, supported by a part of Ringar's endowment in 1678 of £120 a year, and other endowed charities to the amount of £66 a year for the general relief of the poor. (*New Digest of Charity Reports.*) It has a neat theatre, a subscription library, &c. The harbour of Wells is indifferent, and apt to be choked up with shifting sands; but it has been considerably improved of late years, through the exertions of the harbour commissioners.

The principal trade consists in the shipment of corn and malt, and in the import of coals, timber, &c. There belonged to the port in 1841, 38 vessels of less than 50 tons burden, and 27 of more than that amount, the aggregate burden of the latter being 2213 tons. Gross customs duty received at the port in 1840, only £596. The oyster-fishing gives employment to a considerable number of persons. Petty sessions for the hundred are held once a fortnight, and courts leet and baron once a year. Fair, Shrove-Tuesday. The races formerly held at Wells are now discontinued. (*Parl. Rep., &c.*)

About 3 m. W. from the town is Holkham, the magnificent seat of the Earl of Leicester; and the country in the vicinity affords some of the best specimens of what is called the Norfolk system of farming.

WELLS, county, Ia. Situated in the E. towards the N. part of the state, and contains 372 sq. m. Organized in 1837. Wabash river, running centrally through it, affords great water-power. It contained in 1840, 1554 neat cattle, 45,381 sheep, 3466 swine; and produced 4746 bushels of wheat, 42,361 of Indian corn, 3911 of oats, 6827 of potatoes, 7519 pounds of sugar. It had four stores, one saw-mill, one tannery; one school, 25 scholars. Pop. 1822. Cap., Bluffton.

WELLS, p. t., York co., Me., 30 m. S.W. by S. Portland, 79 m. S.W. by S. Augusta, 513 W. Chartered in 1643. Bounded S.E. by the Atlantic. It has a harbour which admits small vessels, of which it has a number employed in the coasting trade and the fisheries. Some vessels are built. It contains 13 stores, one fulling-mill, four grist-mills, 16 saw-mills, three tanneries; 21 schools, 1215 scholars. Pop. 2978.

WELLSBURG, p. v., cap. of Brooke co., Va., 16 m. N. by E. Wheeling, 344 m. N.W. Richmond, 205 W. Situated on the E. side of Ohio river, at the mouth of Buffalo creek.

## WEM.

It contains a courthouse, jail, county offices, a market-house, a bank, an academy, the Jefferson seminary, a female seminary, four churches, a Presbyterian, Episcopal, Methodist, and Disciples'; various mills and manufactories, 250 dwellings, and about 2000 inhabitants. It is surrounded by inexhaustible beds of bituminous coal.

WELSHPOOL, a parl. and mun. bor., market town, and par. of Wales, co. Montgomery, hunds. Pool and Causse, on a branch of the Ellesmere canal, about  $\frac{1}{2}$  m. W. from the Severn, and 16 m. W. Shrewsbury. Pop. of par. in 1831, 4533. The parliamentary borough, which was formerly much larger, may now be considered as nearly co-extensive with the parish, but the municipal borough is of much smaller extent. It is principally in a hollow, but partly also on the acclivity of an eminence leading towards Powys park and castle, a little S. from the town, but included within the parliamentary borough; it is well lighted with gas, and consists of one long and wide street, intersected by others of smaller dimensions, all well paved, and well supplied with water. The houses, which are of brick, have an unusual degree of regularity for this part of the country, the town being, on the whole, neat, cheerful, and English looking. The church of St. Mary, rebuilt in 1774, is a spacious edifice, in the pointed style, with a lofty square tower: it is situated at the base of an eminence, on which is the churchyard, which in some parts overtops the church, and commands a fine view of the town and adjacent country. The living, a vicarage in the gift of the bishop of St. Asaph, is worth £273 a year nett. A new and handsome church on the W. side of the town has recently been erected on a site given by Lord Powys. Here, also, are places of worship for Baptists, Independents, Calvinists, and Wesleyans. The county-hall, in the centre of the main street, is a handsome brick building with a colonnade: the second floor is 64 ft. in length, by 25 ft. in breadth, and is 18 ft. in height. Underneath is a spacious corn market and a court room for the county assizes. A national school for both sexes, in which 250 children are instructed, was opened in 1821; and it has, also, a free school with a small endowment, almshouses for eight females, a dispensary, and several charitable bequests for the education of children, and the distribution of charity among the poor.

From 1782 to 1834 Welshpool was the chief market in North Wales for the sale of Welsh flannels; but in the latter year the greater part of the trade was transferred to Newtown. The flannel manufacture carried on here is not of much importance: in 1838 two woollen-mills were at work in the parish, employing together about 30 hands. Flannel markets are still held once a fortnight; but the business is mostly conducted by private sales. (*Hand-loom Weavers' Rep.; Factory Returns.*) 'Malting is carried on to a considerable extent, and there are several rather large tanneries. The Severn is navigable to within a short distance of the town; and by means of the Ellesmere canal it communicates with the Birmingham and Chester canal lines. Under the Municipal Reform Act the town is governed by four aldermen and 12 councillors; it has a commission of the peace, petty sessions for the hundred of Causse, a court leet, &c., and is, twice a year, the seat of the county assizes.

Welshpool was formerly joined with Montgomery in the exercise of the elective franchise, but was disfranchised in 1793. Under the Reform Act, however, it has been again reinvested with the franchise, and is united with Llanidloes, Llanfyllin, Machynlleth, Montgomery, and Newtown, in returning one member to the House of Commons. Registered electors in this borough in 1839-40, 295; in the united boroughs, 1021. About 1 m. to the S. is Powys castle, the magnificent seat of Earl Powys. It stands on an elevated site, in the centre of an extensive and finely wooded park. In 1823 the entire building underwent a thorough repair under the direction of its present proprietor. The principal entrance is a gateway between two massive round towers. It has in front two immense terraces rising one above another, the ascent to the castle being by a vast flight of steps. It is superbly fitted up, and has many fine pictures and works of art, including several pieces of sculpture from Herculaneum. In the vicinity are the Frelddyn hills, on the loftiest of which an obelisk has been erected in honour of Lord Rodney. Market-day, Monday; fairs six times a year. (*Parl. Reports; Nicholson's Cambrian Guide; Panorama of North Wales.*)

WEM, a market town, parish, and township of England, co. Salop, hund. Bradford, on the Roden, a tributary of the Severn, 11 m. N. by E. Shrewsbury. Area of par., 13,330 acres. Pop. of ditto in 1831, 3973. The town consists principally of one spacious street, from which several smaller streets branch off. The parish church, a handsome edifice, has a lofty tower and a fine chancel: the living, a very valuable rectory, with a curacy, worth £1767 a year, is in the gift of the duke of Cleveland. The market-house is a neat brick and stone building; and in one of its rooms

## WENDOVER.

courts leet are held, at which the two bailiffs governing the town are chosen. The free school, founded in 1651, by Sir T. Adams, a native of the town, who became lord mayor of London, and who also founded an Arabic professorship in Cambridge, has a total income of about £340 a year, and two of Careswell's exhibitions in Bridgerton school. There are charities making provisions for the poor, but to no considerable amount. The inhabitants of the town are mostly engaged in tanning and maling. Horsley supposes that Wem occupies the site of the ancient *Rutunium*; it formerly had a castle, but of this edifice nothing remains. The manor of Wem having come into possession of the crown by the attainder of Philip, earl of Arundel, in the reign of Elizabeth, it was conferred by James II. on his fitting tool, chancellor Jeffries of bloody memory, who had the estate, and who was also created Baron Wem. Wycherley, the dramatist, was born near this town in 1640. Fairs, six times a year, for cattle and stock, linen, and flax seed. (*Parl. Reps., &c.*)

WENDOVER, a market town and par. of England, co. Buckingham, hund. Aylesbury, in the vale of that name; 32 m. N.E. London. Area of par. 5250 acres. Pop. of ditto in 1831, 3008. The town is inconsiderable, and meanly built; and would not, indeed, have been worth noticing in a work like this but for the circumstance of its having enjoyed, from the 21st James I. down to the passing of the Reform Act, by which it was disfranchised, the privilege of sending two members to the House of Commons. The right of election was nominally in the housekeepers not receiving alms, but really in the lord of the manor. The famous John Hampden (to whose family, the manor before mentioned) represented Wendover in five successive parliaments. The living, a vicarage worth £300 a year, is in the gift of the crown. Petty sessions are held once a fortnight, and courts leet and baron are also held in the town.

WENER and WETTER LAKES, two large lakes of Sweden, which see (*ante*, 874).

WENLOCK (MUCH or GREAT), a parl. and mun. bor., market town, and par. of England, co. Salop, hund. Wenlock, on a small tributary of the Severn, 11 m. S.E. Shrewsbury. Area of par., 8420 acres. Pop. of ditto in 1831, 2424. The parliamentary borough is, however, co-extensive with the large district called "Wenlock franchise," consisting of 16 parishes, in addition to that of Much Wenlock, the whole having, in 1831, a population of 12,435. The limits of the old municipal borough were formerly identical with those of the parliamentary borough; but the modern municipal borough is of much less extent, comprising only the three parishes of Dawley, Madeley, and Broseley; the town of Wenlock itself being altogether excluded. The latter, though an inconsiderable place, and indifferently built, has some handsome residences. It consists chiefly of two streets, the houses being mostly of brick. The church, a spacious edifice in the Norman and early English style, has a tower surmounted by a spire at its W. extremity. The living, a vicarage worth £180 a year, is in the gift of Sir W. W. Wynn. It has, also, a Wesleyan chapel, a free endowed school for 12 boys, almshouses for four women, and several minor charities. There are extensive limestone quarries in the vicinity, and copper mines, now abandoned, were formerly wrought to a considerable extent. The municipal borough is divided into three wards, and is governed by six aldermen and 12 councillors. It has a commission of the peace, which is opened twice a year; petty sessions once a fortnight, or oftener if required; and a court of record, also once a fortnight: the last, however, has latterly fallen nearly into disuse. Corporation revenue in 1841, £98.

Wenlock received its first charter from Edward IV., under which it sent, in 1478, one member to the House of Commons, but Broseley and Little Wenlock being afterwards added to the borough, it was empowered to return two members, a privilege it has since continued to enjoy. Previously to the Reform Act, the franchise was vested in the freemen of the borough, such freedom being acquired by birth or election. Registered electors in 1839-40, 949. Wenlock probably owed its origin to the foundation of a famous abbey, of which the ruins still exist, a little S. from the town. This edifice, founded towards the end of the 7th century, was mostly rebuilt, soon after the Conquest, in the Norman and early English styles. The entrance from Wenlock was by a strong gateway, one massive tower of which is still standing. Of the church, which dates from 1080, a large portion of the S. side of the nave, the whole S. wing of the transept, several arches on the N., and the foundations of the choir and Lady chapel remain. The ruins sufficiently attest the former magnificence and splendour of the structure, the precincts of which included an area of 30 acres. Its revenues amounted, at the dissolution, to £401 a year. Markets on Mondays; fairs, five times a year, principally for horses, cattle, and sheep. (*Parl. and Munic. Bound. Rep.; Munic. Corp. Append.*)

## WEST BRADFORD.

WEOBLY, a market town and par. of England, county Hereford hund. Stretford, 10 m. N.W. Hereford. Area of par., 3160 acres. Pop. of do., in 1831, 819. The town consists principally of one street, having several modern and well built houses. The church is a spacious edifice, to which are attached two or three ancient burial-chapels. The living, a vicarage worth £236 a year, is in the gift of the bishop of Hereford. A free grammar school, founded in 1655, affords instruction to 15 boys. Here is also a national school for both sexes, supported by subscription. No particular branch of industry is carried on in the town, which, indeed, would not have been worth notice in a work of this kind, but for the circumstance of its having sent two members to the House of Commons, from the reign of Edward III. down to the passing of the Reform Act, by which it was disfranchised. It has a market on Thursdays, but this is little more than nominal.

WESEL (Germ. *Niederwesel*), a frontier and strongly fortified town of Rhenish Prussia, reg. Dusseldorf, circ. Rees, of which it is the cap., on the Rhine, where it receives the Lippe, 20 m. S.E. Cleves. Pop., in 1838, 10,634. (*Berghauss.*) It is of high antiquity, and was formerly one of the Hanse towns. It has some manufactures of cotton and woollen stuffs, leather, and tobacco, with distilleries, &c.; its port is convenient, and packets ply regularly between it and Amsterdam. Its defences have been a good deal strengthened by the erection of fort Blucher on the opposite or W. bank of the Rhine. (*Schreiber, Guide du Rhin, &c.*)

WESER (an. *Visurgis*), a river of N.W. Germany, its embouchure being in the North sea, and its basin having that of the Elbe to the E., the Ems to the W., and the Rhine and Mayn to the S.W. and S. It is formed by the union of the Fulda and Werra. The former of these rivers has its source in the Rhöngebirge, about lat. 50° 27' N., and long. 10° E.; and traversing the electorate of Hesse-Cassel, it passes the cities of Fulda and Cassel. The Werra rises in the Thuringian forest, in about the same lat., and long. 11°; and intersects several of the smaller Saxon territories, with parts of Prussian Saxony, Hesse-Cassel, and Hanover. Both have a general northerly direction, and unite at Mindin, near the southern extremity of the Hamverian dominion. The combined river, or Weser, flows in a N. course, though with numerous windings, through the territories of Hesse-Cassel, Prussian Westphalia, Brunswick, Lippe-Deimold, Hanover, Bremen, and Oldenburg; falling into the North sea by a wide estuary, about lat. 53° 30' N., and long. 8° 30' E. Its entire length is estimated at nearly 200 m. Its chief affluents are the Aller and Wumme. The Weser is of considerable commercial importance, Bremen being on its banks. Vessels drawing 7 ft. water navigate it up to that city; and it is navigable for boats nearly to its commencement. Vessels drawing from 13 to 14 ft. water ascend the river to Vegesack, 13 m. below Bremen. Ships of large size stop at Bremerhafen, where a new harbour has been formed. Besides the foregoing towns, Minden, Nlenburg, Rinteln, Hameln, &c., are on the Weser; and Hanover, Brunswick, Oldenburg, &c. are on its tributaries. (*Berghauss; Von Reden; Diet. Glog., &c.*)

WEST, t. Huntingdon co., Pa., 8 m. N. Huntingdon bor. Watered by Frankstown branch of Juniata river. It has three stores, one fulling-mill, one woollen factory, two forges, one flouring-mill, three grist-mills, seven saw-mills, one distillery; four schools, 144 scholars. Pop. 1629.

WEST, t. Columbiana co., O. Drained by branches of Sandy creek. The line of the Beaver and Sandy canal passes through it. It has seven schools, 205 scholars. Pop. 1915.

WEST BETHLEHEM, t., Washington co., Pa., 12 m. S.E. Washington bor. It abounds with bituminous coal. The National road passes through it. It has two stores, three grist-mills, two saw-mills. Pop. 1743.

WEST BLOOMFIELD, p. t., Ontario co., N. Y., 219 m. W. Albany, 355 W. Drained by Honeoye creek. It contains three churches, two Presbyterian and a Methodist, nine stores, two fulling-mills, one woollen factory, four grist-mills, six saw-mills, one tannery, one distillery, three potteries; one academy, 95 students; 17 schools, 646 scholars. Pop. 2094.

WESTBOROUGH, p. t., Worcester co., Mass., 30 m. W. Boston, 412 W. Watered by branches of Concord and Sudbury rivers, which afford water-power. It contains two churches, a Congregational and Baptist, three stores, two grist-mills, three saw-mills; eight schools, 453 scholars. Pop. 1658.

WEST BOYLESTON, p. t., Worcester co., Mass., 42 m. W. Boston, 405 W. It has two cotton factories with 3500 spindles; five schools, 309 scholars. Pop. 1187.

WEST BRADFORD, t., Chester county, Pa., 11 m. S.W. Chester, 33 m. W. Philadelphia. Bounded S.W. by Brandywine river, by branches of which it is drained, and which afford water-power. It contains five stores, one

## WEST BRIDGEWATER.

fulling-mill, one woollen factory, two grist-mills, two saw-mills; six schools, 220 scholars. Pop. 1562.

WEST BRIDGEWATER, p. t., Plymouth co., Mass., 25 m. S. Boston. Chartered in 1822, first settled in 1641. Drained by a branch of Taunton river, which affords water-power. It contains three churches, a Unitarian, Baptist, and New Jerusalem, four stores, three furnaces, one grist-mill, three saw-mills; seven schools, 235 scholars. Pop. 1201.

WEST BROMWICH, a market town and par. of England, co. Stafford, hund. Offlow, on the high-road from Birmingham to Liverpool, 5 m. N.N.W. Birmingham. Area of par., 5380 acres. Pop., in 1831, 15,327; in 1841, 26,121. This, which was formerly an inconsiderable village, has increased rapidly in size and population, in consequence of its situation in the centre of one of the principal coal and iron districts of the empire, and of the grand seat of the hardware manufacture. The main street, nearly 1 m. in length, contains some good houses; but the town is, for the most part, very irregularly laid out and its proximity to coal-pits, gas, and iron-works, &c., gives it a black and very unprepossessing appearance. The old church of All Saints, on an eminence, in the N.E. part of the town, is in a mixed style of architecture, and surmounted by a tower. The living, a perpetual curacy, worth £566 a year, is in the gift of the earl of Dartmouth. Christchurch, a handsome Gothic edifice, erected in 1822, is a curacy worth £330 a year. Besides a very fine Roman Catholic chapel, there are various places of worship for Protestant Dissenters, and a national, and some other schools. The gas-works in this town, belonging to the Staffordshire and Birmingham gas company, are probably the most extensive of any in existence. They supply Birmingham, Bilston, Wednesbury, and a vast number of other towns and villages within a radius of 16 m. Here are also some extensive crown-glass works, which, with the gas manufacture, and the extensive collieries in the vicinity, furnish the chief occupation of the labouring classes. The Birmingham and Dudley canals, in the immediate vicinity of the town, give it the benefit of very extensive water communications. Market day, Saturday. E. of the town is Sandwell park, the seat of the earl of Dartmouth. The house is built on the site of a priory of Benedictine monks, founded in the reign of Henry II., of which some trifling remains may still be seen. (*Parl. Reps.*; *Railway Guide*; *Beauties of England and Wales*, &c.)

WESTBROOK, l., Cumberland co., Me., 52 m. S.S.W. Augusta. Presumptpect river affords good water-power. The Cumberland and Oxford canal passes through it. It contains the villages of Sacapappa and Stroudwater, and has 24 stores, two furnaces, two fulling-mills, 10 grist-mills, 13 saw-mills, eight tanneries; two academies, 80 students; 15 schools, 1439 scholars. Pop. 4116.

WESTBROOK, p. t., Middlesex county, Ct., 47 m. S. by E. Hartford, 329 W. Watered by Pochoaug river. Bounded S. by Long Island sound. Ship building is carried on, and 15 vessels are owned here, employed chiefly in the coasting trade. It contains two churches, a Congregational and Methodist, three stores, two grist-mills, two saw-mills; six schools, 190 scholars. Pop. 1182.

WEST BUFFALO, t., Union co., Pa., 8 m. N.W. New-Berlin. Drained by White Deer, Buffalo, and Penn's creek. It has four grist-mills, six saw-mills, two tanneries, two distilleries; seven schools, 380 scholars. Pop. 1460.

WESTBURY, a par. and inunic. bor., market town, and par. of England, co. Wilts, hund. Westbury; at the N.W. extremity of Salisbury plain, 22 m. N.W. Salisbury. The ancient bor. comprised only some portions of the town, but the modern bor. is co-extensive with the par. and hund. of Westbury, having an area of 11,340 acres, with a pop., in 1831, of 7324, and in 1841, of 7528. The town, which is insignificant and irregularly built, is scattered over a considerable surface, the principal street running nearly N. and S. The church, an old cruciform structure, has a tower rising from its centre, and some fine monuments. The living, a vicarage, to which are annexed the curacies of Bratton and Dilton, worth £238 a year, is in gift of the prebentor of Salisbury cathedral. Here are several Dissenting chapels, a national school for 40 boys, endowed with £1000 by a benevolent burgess, who also bequeathed a like sum for the annual clothing of 20 poor women. The town hall, a handsome building, was erected in 1815. Westbury and its vicinity had formerly an extensive woollen manufacture, and though much fallen off, this branch of industry is still carried on, there being at work in the parish, in 1838, eight woollen-mills, employing altogether 421 hands. (*Mills and Factories' Rep.*) Some malting is also carried on; and, upon the whole, the trade of the town, such as it is, may be considered in a thriving state. (*Munic. Corp. Appendix.*)

The charter by which Westbury was incorporated is not extant; the corporation, by which it has-dill lately been

## WEST FALLOWFIELD.

governed, consisted of a mayor, recorder, and 13 capital burgesses. Westbury returned two members to the House of Commons from the 27th of Henry VI. down to the passing of the Reform Act, which deprived it of one member. Previously to the act now referred to, the franchise was vested in the occupiers of 61 burgage tenements comprised in the old borough. Registered electors in 1839-1840, 291; The borough court, held annually on the 2d of November, is the only court held within and for the borough. The election of the borough officers appears to be its principal duty. (*Munic. Corp. Appendix.*)

Westbury, though a place of considerable antiquity, is not connected with any historical event of importance. It has two annual fairs, and a nominal market every Tuesday. (*Bound. and Munic. Rep.*, &c.)

WEST CALN, t., Chester co., Pa., 44 m. W. by N. Philadelphia. Bounded E. by the West branch of Brandywine river which affords water-power. It has five stores, two woollen factories, two cotton factories with 1084 spindles, two flouring-mills, three grist-mills, five saw-mills; six schools, 220 scholars. Pop. 1383.

WEST CAMBRIDGE, p. t., Middlesex co., Mass., 6 m. N.W. Boston, 446 W. Incorporated in 1807. Alewife brook separates it from Cambridge, and affords water-power. It contains three churches, a Congregational, Baptist, and Universalist, 16 stores, two grist-mills, one saw-mill; one academy, nine students; three schools, 277 scholars. Pop. 1353.

WESTCHESTER, county, N. Y. Situated in the S.E. part of the state, and contains 470 sq. m. Bounded W. by Hudson river, S.E. by Long Island sound. Drained by Bronx, Saw-mill, and Croton rivers. Marble abounds at Sing Sing and the vicinity. It contained in 1840, 26,131 neat cattle, 20,043 sheep, 155,187 swine; and produced 35,267 bushels of wheat, 99,574 of rye, 318,023 of Indian corn, 57,226 of buckwheat, 449,090 of oats, 630,920 of potatoes. It had 193 stores, six furnaces, seven fulling-mills, five woollen factories, five flouring-mills, 49 grist-mills, 56 saw-mills, one paper-mill, 11 tanneries, one distillery, two potteries, five printing-offices, five weekly newspapers; 24 academies, 703 students; 121 schools, 3922 scholars. Pop. 48,686. Capital, White Plains.

WESTCHESTER, p. t., Westchester co., N. Y., 146 m. S. Albany, 237 W. Bounded S. by Harlem and East rivers, drained by Bronx river. It contains the villages of Moristania and Fordham. The Harlem rail cars pass several times daily from the city-hall, N. Y., through the latter, which is the seat of a Roman Catholic college. It contains three churches, an Episcopal, Methodist and Friends, several stores; four schools, 142 scholars. Pop. 4154.

WEST CHESTER, p. b., capital of Chester co., Pa., 27 m. W. Philadelphia, 73 m. E.S.E. Harrisburg, 118 W. Situated 2 m. W. of Brandywine river. Incorporated as a borough in 1799. It is regularly laid out with streets crossing each other at right angles, on elevated ground, and contains a courthouse, a jail on the principle of solitary confinement, county offices, an academy, a market house, a bank, five churches, a Presbyterian, Methodist, two Friends, and a Roman Catholic, an Athenaeum with a reading room, a cabinet of natural science, which has connected lectures on scientific subjects, a public library, 33 stores, one brewery, one pottery, four printing-offices, four weekly newspapers; five academies, 364 students; six schools, 142 scholars. Pop. 2152.

WEST EARL, t., Lancaster co., Pa., 13 m. N.W. Lancaster. Drained by Conestoga creek. It has four stores, two fulling-mills, two woollen factories, five flouring-mills, two grist-mills, six saw-mills, two tanneries, three distilleries; two schools, 82 scholars. Pop. 1723.

WESTERLOO, p. t., Albany co., N. Y., 22 m. S.W. Albany, 358 W. Drained by Provost creek and other tributaries of Catskill creek. It contains eight stores, three grist-mills, nine saw-mills; 24 schools, 1142 scholars. Pop. 3096.

WESTERLY, p. t., Washington co., R. I., 42 m. S.S.W. Providence, 373 W. Bounded S. by the Atlantic, W. by Pawcatuck river which separates it from Connecticut. Pawcatuck village is situated on Pawcatuck river, 6 m. from the ocean, to which vessels of 40 tons come, and of 80 tons 2 m. below. A bridge crosses the river to Stonington, where is a small connected village. It contains three churches, an Episcopal, Baptist, and a Free church. A railroad passes through this place to Providence. In the town there are two banks, two academies, 12 stores, two fulling-mills, four woollen factories, two cotton factories with 2336 spindles, three grist-mills, two saw-mills, two tanneries; 14 schools, 574 scholars. Pop. 1912.

WESTERN, t., Oneida co., N. Y., 18 m. N. Utica, 110 m. W.N.W. Albany. Drained by Mohawk river and its tributaries. It has two stores, one fulling-mill, one woollen factory, three grist-mills, 15 saw-mills, three tanneries; 20 schools, 218 scholars. Pop. 3448.

WEST FALLOWFIELD, t., Chester co., Pa., 37 m. W.

## WESTFIELD.

Philadelphia. It has four stores, two woollen factories, two grist-mills; seven schools, 375 scholars. Pop. 1717.

**WESTFIELD**, p. t., Hampden co., Mass., 100 m. W. by S. Boston, 364 W. Drained by Westfield river and its tributary, Little river, which afford water-power. The Hampshire and Hampden canal passes through it. Incorporated in 1669. It has 25 stores, three grist-mills, six saw-mills, four powder-mills, two paper-mills, one printing-office, one weekly newspaper; one academy, 219 students; 19 schools, 667 scholars. Pop. 3526. The village is pleasantly situated on a plain, with a handsome public ground in the centre, and has two churches, a Congregational and Baptist, a bank, several whip factories, several of the above stores, and about 150 dwellings.

**WESTFIELD**, t., Richmond co., N. Y., 158 m. S. Albany. Situated on the S.W. part of Staten Island. Bounded E. by New-York bay, W. by Staten Island sound. It contains Richmond village, the capital of the county. It has six schools, 228 scholars. Pop. 2326.

**WESTFIELD**, p. t., Chautauque co., N. Y., 342 m. W. by S. Albany, 345 W. Bounded N.W. by lake Erie. Drained by Chautauque creek. It contains three churches, a Presbyterian, Methodist and an Episcopal, three commission houses in foreign trade, 22 retail stores, three fulling-mills, one flouring-mill, four grist-mills, 13 saw-mills, one oil-mill, two tanneries, two distilleries; one academy, 145 students; 21 schools, 1316 scholars. Pop. 3199.

**WESTFIELD**, p. t., Essex co., N. J., 45 m. N.E. Trenton, 212 W. Bounded E. by Rahway river, W. by Green brook. It contains a Presbyterian church, 12 stores, five flouring-mills, four grist-mills, one saw-mill, one paper-mill; two academies, 70 students; 14 schools, 144 scholars. Pop. 3150.

**WESTFORD**, p. t., Chittenden co., Vt., 13 m. N.E. Burlington, 56 m. N.W. Montpelier, 531 W. Watered by Brown's river. Chartered in 1763. It contains three churches, a Congregational, Methodist and Baptist, four stores, one fulling-mill, one grist-mill, six saw-mills; 11 schools, 413 scholars. Pop. 1352.

**WESTFORD**, p. t., Middlesex co., Mass., 8 m. W. by S. Lowell, 32 m. N.W. Boston, 436 W. Watered by Stony river. It contains two churches, a Congregational and a Unitarian, five stores, one fulling-mill, one woollen factory, two forges, four grist-mills, three saw-mills, two tanneries; one academy, 84 students; nine schools, 558 scholars. Pop. 1436.

**WESTFORD**, p. t., Otsego co., N. Y., 65 m. W. Albany, 379 W. Drained by Cherryvalley and Elk creeks. It has four stores, two fulling-mills, three grist-mills, four saw-mills; nine schools, 474 scholars. Pop. 1478.

**WEST GREENWICH**, p. t., Kent co., R. I., 18 m. S.W. Providence, 390 W. Watered by Wood river and its branches. Cotton factories with 2324 spindles, seven grist-mills, 10 saw-mills; 11 schools, 201 scholars. Pop. 1415.

**WEST HEMPSTEAD**, t., Lancaster co., Pa., 8 m. W. Lancaster. Bounded W. by Susquehanna river, N. by Chiques creek. It contains Columbia bay, and has two commission houses in foreign trade, 23 retail stores, one furnace, five flouring-mills, six grist-mills, four saw-mills, four tanneries, four distilleries, one brewery, two printing-offices, two weekly newspapers. Pop. 1913.

**WEST MANCHESTER**, t., York county, Pa. Bounded N.W. by Conewago creek. York borough lies partly in this town. It has two stores, one flouring-mill, four grist-mills, one saw-mill, seven distilleries; one school, 44 scholars. Pop. 1262.

**WESTMEATH**, an inland co. of Ireland, prov. Leinster, having N. Cavan and Meath, E. the latter, S. King's county, and W. Roscommon, (from which it is separated by the Shannon) and Longford. Area, 386,251 acres, of which 55,982 are unimproved bog and mountain, and 16,334 lakes. Surface agreeably diversified with woods, lakes, streams, hills, and bogs. The substratum being limestone, the verdure of the fields is remarkably fine, and the soil generally excellent. Property in modern-sized estates. Leases commonly granted for 21 years, and a life. Grazing-grounds extensive. Tillage farms much subdivided, and husbandry, in most respects, similar to that of Meath, which see. Average rent of land, 13s. 7d. an acre. Principal rivers, Shannon, Inny, and Brosna. Westmeath is divided into 12 baronies and 62 parishes; and returns three members to the House of Commons, viz. two for the county, and one for the borough of Athlone. Registered electors for the county, in 1839-40, 2497. In 1831, Westmeath had 23,803 inhabited houses, 25,331 families, and 136,872 inhabitants, of whom 67,700 were males, and 69,172 females.

**WEST MILFORD**, p. t., Passaic county, N. J., 100 m. N.N.E. Trenton, 266 W. It has three stores, 10 forges, two grist-mills, five saw-mills, two tanneries; 11 schools, 400 scholars. Pop. 2108.

**WESTMINSTER**. See LONDON.

## WESTON.

**WESTMINSTER**, p. t., Windham co., Vt., 103 m. S. Montpelier, 440 W. Bounded E. by Connecticut river. The principal village is beautifully situated on a plain, on the W. bank of Connecticut river, enclosed by a semi-circle of hills. The town contains two Congregational churches, one store, two grist-mills, eight saw-mills, one paper-mill; 12 schools, 479 scholars. Pop. 1556.

**WESTMINSTER**, p. v., capital of Carroll co., Md., 58 m. N.W. by N. Annapolis, 68 W. It contains a courthouse, jail, a church, several stores, and about 350 inhabitants.

**WESTMORELAND**, a marit. co. of the N. of England, having N. Cumberland, Durham, and Yorkshire, S. Lancashire, and the extremity of Morecumbe bay, and W. Lancashire. Area, 487,680 acres, of which only 180,000 are said to be arable, meadow, and pasture. It is what its name (West-moor-land) imports, a region of lofty mountains, naked hills, and black barren moors; but the valleys, particularly those of the Eden in the N., and of Kendal in the S., are fertile and well cultivated. The agriculture, state of property, character, and condition of the occupiers of Westmoreland, are so similar to those of Cumberland, that the statements as to the latter may be applied, with very little variation, to the former. Average rent of land, in 1810, 9s. 1d. an acre, being the lowest of any in England. Westmoreland abounds in state of the finest quality; in lead; and, in some few places on its S. and W. borders, there are coal mines. Principal rivers, Eden, Lune, and Kent. The lakes are even more celebrated than those of Cumberland: Windermere, on its W. border, is the most extensive lake in England. The county is divided into four wards and 32 parishes. It returns four members to the House of Commons; viz. two for the county and two for the borough of Kendal and some adjoining districts. In 1841, Westmoreland had 10,848 inhabited houses, and also 56,469 inhabitants, of whom 28,234 were males and 28,235 females. Sum expended on the relief of the poor, in 1838-39, £14,732. Total annual value of real property assessed to the poor rates in 1841, £266,335.

**WESTMORELAND**, county, Pa. Situated toward the S.W. part of the state, and contains 1050 sq. m. Bounded N.E. by Coneaugh or Keskinnettes river, on the N.W. for the distance of 12 m., by the Allegheny river, W. by Youghiogheny river. Drained by Loyalhanna river, and Big Sewickly creek. It contained, in 1840, 30,003 neat cattle, 45,632 sheep, 37,969 swine; and produced 466,382 bushels of wheat, 103,884 of rye, 422,512 of Indian corn, 56,141 of buckwheat, 757,241 of oats, 116,052 of potatoes, 18,400 pounds of tobacco, 32,536 of sugar. It had 74 stores, six fulling-mills, two woollen factories, 70 flouring-mills, six grist-mills, 86 saw-mills, two paper-mills, three oil-mills, 36 tanneries, 53 distilleries, three potteries, four printing-offices, three weekly newspapers; two academies, 80 students; 135 schools, 4151 scholars. Pop. 42,689. Capital, Greensburg.

**WESTMORELAND**, county, Va. Situated in the E. part of the state, and contains 316 sq. m. Bounded N.E. by Potomac river, S.W. by Rappahannock river. It contained, in 1840, 5474 neat cattle, 4317 sheep, 6159 swine; and produced 59,958 bushels of wheat, 1459 of rye, 243,670 of Indian corn, 27,751 of oats, 6899 of potatoes, 1040 pounds of tobacco, 5089 of cotton. It had 15 stores, 13 grist-mills, two saw-mills, three tanneries, one distillery; one academy, 36 students; five schools, 127 scholars. Pop.: whites, 3466; slaves, 3500; free coloured, 963; total, 8019. The true footing of the census makes 7992. Capital, Westmoreland C.H.

**WESTMORELAND**, p. t., Cheshire co., N. H., 65 m. S.W. Concord, 436 W. Bounded W. by Connecticut river. Chartered in 1752. It contains three churches, a Congregational, Universalist, and Christian, two stores, one fulling-mill, four grist-mills, seven saw-mills; 13 schools, 494 scholars. Pop. 1546.

**WESTMORELAND**, p. t., Oneida co., N. Y., 103 m. W.N.W. Albany, 392 W. Watered by Oriskany creek. It contains four churches, a Presbyterian, two Methodist, and a Union, five stores, one fulling-mill, one woollen factory, 10 saw-mills, one paper-mill, four tanneries; 18 schools, 1080 scholars. Pop. 3105.

**WEST NANTMEAL**, t., Chester co., Pa., 34 m. N.W. Philadelphia. Drained by the E. branch of Brandywine river and its tributaries. It has eight stores, one furnace, one forge, two flouring-mills, two grist-mills, five saw-mills, one oil-mill; six schools, 376 scholars. Pop. 1731.

**WEST NEWBURY**, p. t., Essex co., Mass., 39 m. N. by E. Boston, 470 W. Bounded N.W. and N. by Merrimac river. It contains three churches, a Congregational, Methodist, and Universalist, four stores, one grist-mill, one tannery; six schools, 375 scholars. Pop. 1560.

**WESTON**, p. t., Windsor co., Vt., 91 m. S. by W. Montpelier, 456 W. West river affords water-power. It contains three churches, two stores, one fulling-mill, two grist-mills, eight saw-mills; 12 schools, 368 scholars. Pop. 1032.

**WESTON**, p. t., Middlesex co., Mass., 14 m. W. Boston, 426 W. Watered by a branch of Concord river. It con-

## WEST PENN.

tains three churches, a Congregational, Methodist, and Baptist, three stores, one cotton factory with 512 spindles, two grist-mills, one saw-mill, one tannery, one pottery; six schools, 287 scholars. Pop. 1092.

WESTON, p. t., Fairfield co., Conn., 63 m. S.W. Hartford, 281 W. Drained by Saugatuck and Mill rivers. It contains five churches, two Congregational, an Episcopal, Methodist, and Baptist, eight stores, one flouring-mill, eight grist-mills, 13 saw-mills; two academies, 26 students, 17 schools, 459 scholars. Pop. 2651.

WEST PENN., p. t., Schuylkill co., Pa., 79 m. N.E. Harrisburg, 189 W. Watered by Little Schuylkill river. It abounds with anthracite coal, and contains a Lutheran church. Pop. 1362.

WEST PENNSBORO', t. Cumberland co., Pa., 8 m. W. Carlisle. Bounded N. by Conedogwinit creek. It has one commission house in foreign trade, three retail stores, eight flouring-mills, two saw-mills, two tanneries, three distilleries; nine schools, 270 scholars. Pop. 1867.

WESTPHALIA, prov. containing all the N. portion of the Prussian dominions to the W. of the Weser, having N., Hanover; E., the latter, and some of the smaller German states; S., the latter, and the Prussian prov. of the Rhine; and W., Holland. Area, 7801 m. Pop., in 1837, 1,317,541; of whom 749,782 are Catholics, 554,649 Protestants, and 13,016 Jews. Principal towns, Munster, Minden, Paderborn, Arnsberg, Hamm, &c. It is divided into three regencies, and these again into 37 circles. Principal rivers, Ems, Weser, Lippe, &c. Surface in the E., N.E., and S., hilly or mountainous; but it is level in the middle of the province, and in the N.W. adjoining Holland. In some places the soil is very fertile, but there are some pretty extensive marshes and heaths. Most part of this, as well as of the adjoining province of the Rhine, is divided into small farms, the occupiers of which live together in villages. The rent is paid sometimes in money, but frequently in produce or services, or both. The occupiers are a kind of copy-holders, their lands descending from father to son. (*Jacob's Tour in Germany*, p. 103.) The Rhine provinces being in possession of the French, when the famous edict of 1811 was published, making copy-holders freeholders in the old states of the Prussian monarchy, it did not apply to them. (See PRUSSIA.) Principal products, corn, flax, and potatoes. It is also productive of horses, cattle, sheep, and hogs. The latter furnish the Westphalian hams, so abundant in our markets, and so excellent. There is also great plenty of game and honey. There are vast beds of coal, with mines of iron, lead, copper, rock salt, &c., with salt springs. Manufactures, principally linen, in the production of which 32,331 looms were wholly and occasionally employed in 1837: cottons, hardware, and cutlery, the latter being largely produced at Iserlohn, Dortmund, Hagen, and other places; with paper, spirits, tobacco, and various other articles.

WEST POINT, p. v., Cornwall t., Orange co., N.Y., 92 m. S. by W. Albany, 278 W. Pleasantly situated on the W. bank of the Hudson, 52 m. N. of the city of New-York. It derives its importance from the United States military academy, located here. In 1824 congress appropriated \$10,000 for the purchase of a farm which included the site of the academy, containing the ruins of the revolutionary fort Putnam; and in 1826 the state of New-York ceded to the United States the jurisdiction of 250 acres of land, which includes only a part of the land purchased by the United States. The remainder is under the jurisdiction of the state. There is a number of buildings, well adapted to the purpose of the institution. There is a stone building of the Gothic architecture containing the philosophical and astronomical rooms and the library, 150 feet long and 60 feet wide, two stories high, with three towers. The library room, which is ornamented by paintings and by architectural designs, contains an appropriate library of 14,564 vols. of which 3654 are duplicates. The philosophical room is furnished with a fine apparatus, and the astronomical part has an observatory covered by a dome in the central tower, weighing 4 tons, and revolving on four cannon balls. It has some very complete instruments. The chapel is devoted to religious purposes, is 50 feet in front by 70 feet deep and 24 feet high, and stands between the library and the academy. The academy is a fine stone building 275 feet long by 75 feet wide, and three stories high, containing a riding hall, a number of recitation rooms, various offices, and the engineering room, furnished with beautiful models of fortification and civil engineering, as well as of architecture, &c. There are in the building two spacious galleries for paintings and sculpture. In the basement is a chemical laboratory. The hospital is a stone edifice near the bank of Hudson river commanding a fine prospect, and admirably fitted up. The military laboratory has towers designed as workshops, and enclosed within the walls are various kinds of ordnance, some of revolutionary memory, and among them the remnants of the immense chain which was stretched

## WEST PORT.

across Hudson r. There are also a mess hall, and two barracks for the accommodation of the cadets, the number of which is limited to 260. In the N. part is a village called Camp Town, comprising barracks for the soldiers, and some other buildings for some persons employed about the establishment; and farther N. near the Hudson, is the cemetery for the officers and cadets. Houses for the accommodation of the officers are located S.W. of the encampment ground. There is also a fine hotel for the accommodation of visitors. About the grounds are several monuments, the most conspicuous of which is that of the Polish general Kosciusko, erected by the cadets, at an expense of \$5000. There have been from April 29th, 1812, to January 29th, 1844, 1118 graduates at West Point; of whom 147 died in the service in the army, and 537 are now in the service, including five professors. The education given at West Point, both scientific and military, is of a high order. Near the military academy is the private academy of Mr. J. D. Kinsley, formerly instructor in the military academy, which is in high repute.

West Point was the strong hold which Arnold by his treason stipulated to surrender to the British. But the treason was detected; Arnold escaped, while Andre, his British coadjutor, paid the forfeiture with his life.

WESTPORT, a seaport town of Ireland, co. Mayo, prov. Galway, on a small river near the S.W. angle of Clew bay, 42 m. N. by W. Galway, and 135 m. W.N.W. Dublin Pop., in 1831, 4428. This is a modern, neat, and rather nice-looking town. It occupies a narrow valley, and on each side and parallel to the stream by which it is intersected is a street planted with trees: the other streets branch from these on either side, and are for the most part inconveniently steep. The parish church is situated within Lord Sligo's park, immediately adjoining the town, and it has also a large Roman Catholic chapel, with places of worship for Presbyterians and Methodists, several schools, a barrack, a market-house, a linen-hall, and courthouse. A manor court, with jurisdiction to the amount of £10 sterling, is held once a month; general sessions in April and October, and petty sessions on Thursdays. It is also a constabulary and coast-guard station. The linen trade was, at no very distant period, carried on extensively in this town and its vicinity. Latterly, however, this branch of industry has greatly declined, and the inhabitants are now principally dependent on the fishery, and on the export of corn, provisions, &c. The gross value of the exports of these, in 1835, was estimated at £87,895; of which corn, meal, and flour made no less than £83,547, and linen only £560! Several large flour-mills have been opened in the neighbourhood; and there are also distilleries and breweries. Branches of the bank of Ireland and of the National bank have been opened here. Postoffice revenue, in 1830, £811; do., in 1836, £949.

The port and corn warehouses are situated a little below the town, on the bay, vessels drawing 13 ft. water coming close to the quays. Clew bay has at its mouth Clare island, on the most northerly point of which is a lighthouse; there are many small islands within the bay, which, in many places, affords convenient and secure anchorage. Gross amount of customs duty collected here in 1840, £7555.

Crough Patrick, or the Reek, rising 2499 ft. above the sea, is situated immediately on the S. side of the bay, 4 or 5 m. S.W. from the town. This is not only one of the highest, but also one of the most celebrated mountains in Ireland, being the spot where St. Patrick is said to have collected the snakes and other venomous reptiles from all parts of the island, and from which he precipitated them headlong into the sea! An altar or cairn is erected on the summit of the mountain in memory of this grand achievement, and it continues to be a frequent place of pilgrimage and devotion. The view from the summit is very magnificent. The land in the vicinity of the town is divided into very small portions, and the occupiers are, for the most part, miserably poor. Lord Sligo's park or demesne, to which strangers have access, is very fine; but the rest of his immense estate is but little removed from a state of nature. (*Official Returns*; *Anglis*, li. 96, &c.)

WEST PORT, p. t., Bristol co., Mass., 59 m. S. Boston, 426 W. Bounded S. by the Atlantic, at the mouth of Buzzard's bay. Drained by Westport or Nochnackuck river, which flows by a wide mouth into Buzzard's bay. It contains three churches, a Congregational, Methodist, and Baptist, six stores, one fulling-mill, one cotton factory with 2000 spindles, one furnace, three grist-mills, five saw-mills; 18 schools, 462 scholars. Pop. 2920.

WEST PORT, p. t., Fairfield co., Ct., 64 m. S.W. Hartford, 273 W. Watered by Saugatuck r. It contains a village on both sides of the river, connected by a bridge; and has in the town three churches, a Congregational, a Methodist, and an Episcopal, 14 stores, one cotton factory with 1100 spindles, four grist-mills, one saw-mill: three academies, 57 students; six schools, 244 scholars. Pop. 1803.

## WEST ROCKHILL.

**WEST PORT, t.** Essex co., N. Y., 125 m. N. Albany. Bounded E. by lake Champlain, into which flows Black cr. It contains nine stores, one fulling mill, two woollen factories, two forges, one grist-mill, 10 saw-mills; one academy, 100 students; six schools, 307 scholars. Pop. 1932.

**WEST ROCKHILL, t.** Bucks co., Pa., 33 m. N.N.W. Philadelphia, 92 m. E.N.E. Harrisburg, 171 W.: Drained by Perkiomen creek and a branch of Tobicon cr. It contains four stores, three grist-mills, three saw-mills, two oil-mills, four tanneries. Pop. 1631.

**WEST SALEM, t.** Mercer co., Pa., 17 m. N.W. Mercer. Drained by Shenango cr. It has one store, one fulling-mill, two grist-mills, six saw-mills, two tanneries; 16 schools, 716 scholars. Pop. 2528.

**WEST SPRINGFIELD, p. t.** Hampden co., Mass., 93 m. W. Boston, 363 W. Bounded E. by Connecticut river, over which is a fine bridge connecting it with Springfield. Westfield river affords good water power. It contains seven churches, four Congregational, a Methodist, and two Baptist, 10 stores, one fulling-mill, one cotton factory with 3400 spindles; 27 schools, 791 scholars. Pop. 3636. The Boston and Albany railroad passes through it.

**WEST STOCKBRIDGE, p. t.** Berkshire co., Mass., 138 m. W. Boston, 365 W. Drained by Williams r. It contains an abundance of marble, variously coloured, from a pure white to black. The Boston and Albany railroad here meets the Housatonic railroad, and the Hudson and Berkshire railroad. It contains two churches, a Congregational and a Methodist, six stores, one fulling-mill, one grist-mill, 12 saw-mills; six schools, 281 scholars. Pop. 1448.

**WEST TURIN, t.** Lewis co., N. Y., 126 m. N.W. Albany. Bounded E. by Black river, in whoseare here the high falls, 63 feet high, and immediately bel w the Black river canal enters it. Drained by Salmon river and Fish cr. It possesses great water-power, and has four stores, one flouring-mill, eight saw-mills; 16 schools, 472 scholars. Pop. 2042.

**WEST UNION, p. v.,** Tiffin t., capital of Adams co., O., 106 m. S. Columbus, 443 W. It contains a courthouse of stone, a jail, county offices, a market-house, eight stores, various mechanic shops, a printing-office, issuing a weekly newspaper, and about 500 inhabitants.

**WEST VINCENT, t.** Chester co., Pa., 30 m. N.W. Philadelphia. Watered by Stony, French, and Ring creeks. It has five stores, four grist-mills, four saw-mills; five schools, 175 scholars. Pop. 1232.

**WETHERSFIELD, p. t.** Hartford co., Ct., 4 m. S. Hartford, 336 W. Bounded E. by Connecticut r. The village is beautifully situated on the W. side of the river, handsomely laid out with broad and finely shaded streets, and is well built, containing three churches, a Congregational, Methodist and Baptist, an academy, a female seminary, the Connecticut state prison, which contains apartments for the warden and 200 cells for convicts, and two ranges of workshops, the whole enclosed by a wall 20 feet high. The town has besides a Methodist and two Congregational churches; and nine stores, one fulling-mill, three grist-mills, two saw-mills, two tanneries; one academy, 56 students; 13 schools, 632 scholars. Pop. 3824.

**WETHERSFIELD, p. t.** Wyoming co., N. Y., 253 m. W. Albany, 361 W. Drained by Tonawanda and Wiskoy creeks. It has four stores, three fulling-mills, one woollen factory, two grist-mills, five saw-mills, two tanneries; nine schools, 560 scholars. Pop. 1728.

**WETHERSFIELD, p. t.** Trumbull co., O., 169 m. N.E. Columbus, 398 W. Drained by Mahoning r. The Pennsylvania and Ohio canal passes through it. It has nine schools, 500 scholars. Pop. 1447.

**WETUMPKA, city,** Montgomery co., Ala., 110 m. S.E. Tuscaloosa. Situated on the E. side of Coosa r. It contains four churches, a Baptist, Methodist, Episcopal and Presbyterian, an academy, the Alabama state prison, 18 stores, 275 dwellings, 2600 inhabitants. The Harrowgate springs, containing valuable mineral properties, are situated on the S. side of the city, and are much resorted to during the summer months.

**WEXFORD, a** marit. county of Ireland, prov. Leinster, having on the S. and E., St. George's channel; on the N., the co. of Wicklow; and on the W., Carlow, Kilkenny, and Waterford harbour, by which it is separated from Waterford. Area, 554,479 acres, of which 18,500 are unimproved mountain and bog. Surface, pleasantly diversified; climate mild. Soils either light or stiff clays. Property in pretty considerable estates: farms of various sizes; but there is less of the extreme subdivision of land in this, than in most other Irish counties. Dairies numerous, but badly managed; some districts have been long noted for their great crops of barley. Average rent of land 14s. an acre; but, in general, it is too high, and the competition for small patches is carried beyond all reasonable bounds. The barony of Forth, occupying the S.W. angle of Wexford, differs widely from the rest of the county, and, in-

## WEXFORD.

deed, from every other district of Ireland. It was settled at a distant period by a colony from South Wales; and, till very recently, the Welsh language was spoken by every one, and is still understood by the older inhabitants. The people are industrious, provident, peaceable, and cleanly. The farms are small, running from 10 up to 50 or 60 acres, but those from 30 to 40 are most common. Mr. Inglis says, that the land is clean, and well cultivated; that the crops of wheat and beans, both of which are extensively grown, are excellent; and that the improved Scotch plough with two horses is in universal use. The farm-houses are substantial, and the cottages clean and comfortable, forming, in this respect, a striking contrast with those in most other parts of the county. Persons of different religious creeds live in this barony harmoniously together. Land here, as in the rest of the county, very high-rented. (l., 49.) Wexford has neither minerals nor manufactures of any importance. Principal rivers, Slaney and Barrow. Wexford is divided into eight baronies, and 142 parishes; and returns four members to the House of Commons, viz. two for the county, and one each for the boroughs of Wexford and New Ross. Registered electors for the county, in 1839-40, 3604. In 1831, Wexford had 29,923 inhabited houses, 32,856 families, and 182,713 inhabitants, of whom 87,995 were males, and 94,718 females.

**WEXFORD, a** parl. bor. and seaport town of Ireland, prov. Leinster, co. Wexford, of which it is the cap., at the mouth of the estuary of the Slaney, on the W. or inner side of Wexford Haven, 67. m. S. by W. Dublin; lat. 52° 22' N., long. 6° 24' W. Area of modern parl. bor. 450 acres; pop. of ditto, in 1831, 10,670. It is built wholly on the S. side of the river, and consists of a row of houses along the quay fronting the harbour, of a street parallel to the latter, and of numerous cross streets; but, excepting the quay, they are mostly narrow, irregular, ill-paved, and dirty. A long and poor suburb, principally occupied by fishermen, extends to a considerable distance S. from the town. Of 1783 houses in the parliamentary borough in 1831, 1113 were slated and 670 thatched. The communication with the country on the opposite side of the harbour is maintained by means of a wooden bridge, which, with its embankments, is nearly 1700 ft. in length (measured on the plan in the Boundary Report), having a draw-bridge in the centre, and the river being navigable to Enniscorthy. The expense of keeping it up is defrayed by a toll. The public buildings and establishments comprise two Protestant churches, several Roman Catholic chapels, two Methodist meeting-houses, the county courthouse, a large and handsome jail, a fever hospital, house of industry, dispensary, lunatic asylum, a diocesan school for the see of Ferns, and various other schools; a Roman Catholic college, supported by private endowment, a priory, a nunnery, a public library, chamber of commerce, assembly rooms, club-house, barracks, &c. The old walls, by which the town was formerly surrounded, were repaired in 1804, but they have since been allowed to go to ruin, and the suburbs extend considerably beyond them. Malting is carried on to a very considerable extent, and, in 1835, duty was paid on 202,449 gallons of spirits distilled in the town. The exertions of Father Mathew, however, lessened this business.

Wexford Haven is of great extent, and has a fine appearance on a nap; but it is shallow, and owing to a bar at its mouth between the two low, long, sandy peninsulas which form its external boundary, it cannot be entered by vessels drawing more than 9 or 10 ft. water, and even these should, with neap tides, have four hours flood to enter. But notwithstanding these drawbacks, Wexford, from her situation in a fertile county, and on a river navigable to a considerable distance by barges, and other circumstances, has a considerable trade, and is, in fact, one of the principal secondary ports of Ireland for the exportation of corn, meal, and flour, butter of superior quality, provisions, and cattle. This is evident from the subjoined table.

STATEMENT of the Quantity and Value of the principal Articles exported from Wexford in 1835.

Articles Exported.	Quantity.	Estimated Value.
Corn, meal, and flour . . . . . cwt.	488,485	175,180
Butter . . . . . —	18,000	54,000
Feathers . . . . . —	400	400
Wool . . . . . lbs.	50,000	2,000
Eggs . . . . . —	20	160
Spirits . . . . . galls.	450	95
Cows and oxen . . . . . head	3,000	36,000
Horses . . . . . —	20	300
Sheep . . . . . —	7,500	15,000
Swine . . . . . —	2,200	12,000
Other Articles . . . . . value	—	16,000
Total . . . . .	—	312,135

Steamers ply once a week between Liverpool and Wexford. Excellent oysters are found in the bay, and the fishing business is carried on to a considerable extent. There

## WEYHILL.

belonged to the port, in 1841, 69 vessels of the aggregate burden of 7114 tons, exclusive of those below 50 tons. Gross customs revenue in same year, £9357. Branches of the Provincial bank, the bank of Ireland, and the National bank, have been opened here. Postoffice revenue in 1830, £1971, ditto in 1836, £2134. Two weekly newspapers are published in the town. A patent slip and a building yard are attached to the harbour, and some little business is done in the building and repairing of vessels and boats.

Wexford has several charters, the first having been granted by the earl of Pembroke, in 1318. Under the Irish Municipal Reform Act, 3 and 4 Victoria, cap. 103, the corporate body consists of a mayor, bailiffs, free burgesses, and commonality. The borough returned two members to the Irish House of Commons from 1374 down to the union; and it has since returned one member to the imperial House of Commons. Registered electors in 1839-40, 405. The assizes for the county are held here, with general sessions in January and at midsummer, special road-sessions twice a year, and petty sessions and a borough court for debts not exceeding £2, once a week. Markets on Wednesdays and Fridays. Fairs six times a year.

In 1649 Wexford was taken by Cromwell, when a considerable number of the inhabitants were put to the sword. During the rebellion of 1798 it was, for awhile, the head quarters of the insurgents, by whom it was evacuated after the battle of Vinegar Hill. The town is possessed of considerable property: but it is let on long leases, at a low rate (*Boundary Reports, and other official Returns.*)

Mr. Inglis says, "There are many good shops in Wexford, and I heard no complaint of the want of trade; and the best illustration I can give of the comfortable condition of the people is, that during the two days I spent in the town, I was not once asked for charity. I do not mean to say that there is not a pauper or a person out of employment in Wexford, but it may be said that it is a flourishing town." (I. 45.)

WEYHILL, a village of England, co. Hants, hund. Andover, within a short distance of the W. verge of Salisbury plain, 15 m. N.W. Winchester. It is celebrated for its great annual fair, held for six or seven days from the 9th of October. This, perhaps, is the largest fair in the S. of England for sheep, and is, also, a considerable mart for horses, cheese, and hops. At the fair which began on the 10th of October, 1840, it was estimated that above 150,000 sheep were exhibited for sale. A row of booths, called Farnham-row, is assigned exclusively to the dealers in Farnham hops, but hops from Kent, Sussex, &c., are also brought thither in considerable quantities. The horses exposed for sale are principally cart colts, nags, and hunters; the cheese consists mostly of N. Wilts., Somerset, and Gloucester. The booths are formed into regular streets, and exhibit all the features of a large town, every part of which presents a scene of bustle and activity. On old Michaelmas day many farm servants are hired.

WEYMOUTH and MELCOMBE REGIS, two contiguous towns of England, forming together a par. munic. bor., and seaport, co. Dorset, hund. Calford-Tree; on the English channel, at the mouth of the small river Wey, 3 m. N. from the headland called the Isle of Portland, and 120 m. W.S.W. London. The modern par. bor., comprising the chapelry of Weymouth and the par. of Melcombe Regis, with portions of the adjacent pars. of Wyke Regis and Radipole, had, in 1831, a pop. of 8095. Weymouth and Melcombe lie on opposite sides of the harbour, that is, of the narrow outlet of an arm of the sea, called the Backwater, nearly 2 m. in length, being connected by a handsome stone bridge, erected over this outlet in 1770. The most considerable part of Melcombe consists of ranges of buildings situated on the N. side of the harbour, extending for nearly 1 m. in front of the esplanade along the sea, which here forms a fine semicircular bay. The houses here, which are large and handsome, are chiefly occupied by visitors, attracted to the town by its unequalled advantages for sea-bathing, and other conveniences. But, with one or two exceptions, the greater number of the other streets are mostly narrow and dirty, with mean houses. Much of the ground on which Melcombe stands is low, and has been reclaimed, at different times, from the Backwater. On the N., about 20 acres of this land have been recently enclosed for the purpose of forming a park, and between this and the sea there is a narrow space, which will probably be built over with good houses.

Weymouth, on the S. side of the harbour, not being resorted to by visitors, retains, in great measure, its original character of a fishing town, and is irregularly and ill built. It is chiefly, in fact, inhabited by the labouring classes; in the outskirts, however, there are some good ranges of houses, and handsome detached dwellings. The parish church of Melcombe, rebuilt in 1817, though a spacious edifice, is not remarkable for its architecture: the living, a rectory in the gift of W. Wyndham, Esq., is worth £298 a

## WHEELER.

year nett. The chapel of ease in Weymouth, opposite the foot of the bridge, is a tasteful modern building in the Gothic style; the living, a perpetual curacy, is attached to the rectory of Wyke Regis, to which parish Weymouth belongs. There are several dissenting chapels; and in Melcombe are spacious assembly-rooms, a small town-hall, neat theatre, good libraries, baths, and other establishments usual at a watering place. There is a jail, but of very inferior description. Two national schools have been founded, and among other charitable institutions for the education and relief of the poor is a bequest of £75 a year for the apprenticing of poor children. The town is lighted with gas; but the inferior streets are badly paved. Facing the sea is the lodge built for the residence of the royal family, by whom the town was frequently visited during the reign of George III. An equestrian statue of that monarch has, also, been erected at the N. extremity of the main street. On the Dorchester road, near the town, are barracks, now occupied as private houses. The harbour which, as already stated, consists of the inlet between Weymouth and Melcombe as far as the bridge is narrow, and the bar at its mouth has only 6 feet water at low ebb; and, as spring tides here rise only 6 or 7 feet, the port cannot be entered by large vessels. There is, however, good anchorage in the bay, in 7 or 8 fathoms water. A battery, and several small forts have been erected at the entrance to the harbour.

Freestone from the Isle of Portland, Roman cement, bricks, tiles, &c., are among the principal exports. Ship-building, and rope and sail making are carried on to a small extent. In 1842, there belonged to the port 56 vessels, of the aggregate burden of 6037 tons. Gross customs revenue, in 1840, £14,728. Weymouth was of but little consequence till George III. made it his summer residence. Since then the town has continued to increase and may be considered as flourishing; it is frequented by numerous visitors during the summer season, and a great number of respectable families have made it their permanent residence. The fine sands along the shore, and the gradually increasing depth and purity of the water, render it highly suitable for a bathing place. A raised terrace or esplanade has been constructed round a great portion of its picturesque bay, which constitutes the fashionable promenade of the inhabitants. Races, and a regatta, take place annually in August.

Weymouth and Melcombe were originally distinct boroughs. In consequence of the continued dissensions between the municipal authorities of the two towns, a union of the boroughs took place in the 13th of Elizabeth; and from that period down to the passing of the Reform Act, the united borough possessed the privilege of returning four members to the House of Commons; but the above act reduced the number of members to two: while, at the same time, some additions were made to the boundaries of the old borough. Registered electors, in 1839-40, 600. Under the Municipal Reform Act, the town is divided into two wards; and is governed by a mayor, five other aldermen, and 18 councillors. It has a commission of the peace, generally held once a year, with jurisdiction over all but capital offences; a weekly court of record, and two courts leet, held annually at the same time and place as the sessions. The petty customs, harbour dues, &c., belonging to the corporation, are let by auction. Corp. revenue, in 1840, £670 4s. Markets, Tuesdays and Fridays; fairs, three times yearly. (*Parl. Reps.; Priv. Information.*)

WEYMOUTH, p. t., Norfolk co., Mass., 12 m. S.S.E. Boston, 446 W. Watered by Fore and Back rivers which are branches of Boston harbour, and navigable for large vessels, and into one of them a considerable mill stream enters. It contains three churches, two Congregational, and a Methodist, 28 stores, four grist-mills, four saw-mills, one tannery; four academies, 172 students, eight schools, 1005 scholars. Pop. 3738.

WEYMOUTH, t., Atlantic co., N. J. Bounded E. by Great Egg Harbour r. It has eight stores, one forge, one grist-mill, six saw-mills; six schools, 336 scholars. Pop. 1158.

WHARTON, t., Fayette co., Pa., 11 m. S.E. Uniontown. Bounded E. and N. by Youghiogheny r. It has two stores, one furnace, two grist-mills, 11 saw-mills; four schools, 106 scholars. Pop. 1325.

WHATELY, p. t., Franklin co., Mass., 9 m. N. Northampton, 94 m. W. Boston, 389 W. Bounded E. by Connecticut r. Drained by Mill r. Incorporated in 1771. It contains two churches, a Congregational and a Baptist, two stores, one fulling-mill, one woollen factory, one cotton factory with 200 spindles, three grist-mills, four saw-mills, two tanneries; six schools, 380 scholars. Pop. 1072.

WHEATLAND, p. t., Monroe co., N. Y. 14 m. S.W. Rochester, 273 m. W. by N. Albany, 368 W. Bounded E. by Genesee r. Drained by Allen's cr. It contains 13 stores, one furnace, one fulling-mill, one woollen factory, two grist-mills, four saw-mills, three tanneries; 13 schools, 896 scholars. Pop. 2871.

WHEELER, p. t., Steuben co., N. Y., 216 m. W. by N.

## WHEELING.

Albany, 308 W. Drained by Five Mile cr., a branch of Conhocton r. It has one fulling mill, nine saw mills; nine schools, 381 scholars. Pop. 1334.

WHEELING, city, port of entry, and capital of Ohio co. Va., 351 m. N.W. Richmond, 92 m. below Pittsburg, 837 m. above the mouth of the Ohio, 266 W. Pop. in 1810, 914; in 1820, 1567; in 1830, 5231; in 1840, 7885. Situated on the E. bank of Ohio r., at the mouth of Wheeling cr. It is surrounded by bold and precipitous hills, which contain an inexhaustible quantity of bituminous coal, and which approach the river so nearly as to leave rather a small area for the city. It is the largest place in regard to commerce, manufactures, and population, in western Virginia. The National Road passes through it, constituting it a great thoroughfare for persons travelling to the west. The city is situated on a high bank of the river, and extends along it for a mile and a half. It was laid out in 1793; and has received ten additions, and now contains 1270 lots, 856 on the N., and 414 on the S. side of Wheeling cr. Lane's island lies in Ohio r., immediately in front of the city, one half of which is laid out in 923 lots, and has received the name of Columbia city. Wheeling contains a handsome courthouse, a jail, county offices, an academy, the Wheeling Institute, a theatre, a masonic hall, eight churches, two Presbyterian, an Episcopal, Methodist, Baptist, a Campbellite, a Friends, and a Roman Catholic, seven commission and forwarding houses, 97 retail stores, four iron foundries, four steam engine factories, eight glass houses, in several of which cut glass is manufactured, four woolen and cotton factories with carding machines, four saw-mills, two paper-mills, three manufactories of white lead, sheet lead and coppers; and in the vicinity, 134 flouring mills. The city contains about 1000 dwellings, many of them elegant. There are exported 1,500,000 bushels of bituminous coal, annually. Over 20 steamboats are owned here, and many others passing up and down the Ohio stop at its wharves. The tonnage, September 30th, 1842, was 1212. In 1840, it was 2460.

WHITBY, a parl. bor. and seaport town of England, N. riding co. York, liberty of Whitby Strand, at the mouth of the Esk, here crossed by a swing iron bridge, erected about six years ago, instead of an old drawbridge, 42 m. N.N.E. York. Lat. of lighthouse, 54° 30' N.; long. 0° 37' W. Pop. of parl. bor., which includes the townships of Whitby, Ruswarp, Hawsker-cum-Stainsacre, in 1831, 10,399, in 1841, 9975. It is built along both banks of the Esk, the direction of which, from S. to N., determines that of the town; but, as the level ground by the river is of very limited dimensions, the buildings on both sides are carried up its banks, which, on the E. side especially, are precipitous. The houses, partly of stone and partly of brick, in the lower part of the town, are closely packed together, and the streets are for the most part narrow, while those on the banks are inconveniently steep; they are, however, well paved and lighted with gas, and some new streets on the W. side of the town are comparatively handsome; and since the new bridge was erected, the streets leading to it and to the pier have been widened, and the lower parts of the town much improved. The more opulent inhabitants have residences in the environs, which are beautiful and romantic. The church is inconveniently situated on the top of a cliff nearly 200 ft. above the sea, on the E. side of the town, the ascent to it being by a flight of 190 stone steps; but a spacious proprietary chapel was, about 60 years ago, constructed in the lower part of the town. The living, a curacy in the gift of the archbishop of York, is worth £206 a year nett. It has also places of worship for Methodists, Quakers, Presbyterians, Independents, Roman Catholics, &c. Among the educational and charitable institutions may be mentioned, Lancelian schools for children of both sexes; two infant schools; a seaman's hospital, for 42 widows and their children; a dispensary, established in 1786; a large work-house, and several minor charities. The public buildings include the town hall, erected in 1788; a building with public baths, and apartments for the subscription library, and the literary and philosophical society, erected in 1826; a handsome news room, custom-house, &c. The Union mill, for supplying the members with flour at a reduced price, on the W. side of the town, is a conspicuous object. On the whole, "the appearance of the town is that of a substantial and wealthy seaport." (*Bound. Report.*)

The harbour is formed by two piers; that on the W. side, 640 yards in length, terminates in a circular head, on which a lighthouse, having the lantern elevated 82 ft. above the sea, has been constructed. A noble quay, extending from the bridge to the west pier, is now being built, and, when completed, will form one of the finest promenades in the kingdom. The opposite pier extends about 215 yards from the cliff on the E. side of the river. The channel between the piers forms the harbour, which, however, labours under the drawback of nearly drying at low water; and in rough weather, when the wind is from the N. or N.E., a heavy sea is thrown in. To obviate the latter inconven-

## WHITCHURCH.

ence, an internal pier has been built, and the inner harbour, or that above the drawbridge, is but little affected by the weather. There are dry docks and slips for the construction and repair of ships, the building of which, though less now than formerly, is carried on to a considerable extent; ships of the burden of 3913 tons having been built here in 1841. The manufacture of sail-cloth, cordage, &c., is also carried on.

Whitby is principally indebted for its rise to the alum works in its vicinity, commenced in 1595; the exports of the alum, and the import of the coal required in its manufacture, giving birth to a considerable trade. This, however, is by no means so extensive as formerly. There are no alum works now very near to Whitby. Sandsard and Kittenness works, belonging to the marquis of Normandy, are from 3 to 5, and the Peak works 8 m. off. The shipments of alum amounted, in 1841, to 3237 tons; and in 1840, to 2747 do. There belonged to the port in 1842, 291 ships of the aggregate burden of 47,837 tons. Several of these ships were formerly employed in the N. whale fishery; but this having declined, the shipping belonging to the port is now principally employed in the Baltic, American, and East Indian trades. Most of the large ships sail from London, Bristol, Liverpool, and Hull. Gross customs duty received at the port in 1841, £6968, having increased considerably since the establishment, about that time, of bonding warehouses.

The town is under the superintendence of the magistrates of the N. riding; and a manorial court of pleas for the recovery of debts is held every third Monday.

The Reform Act conferred on Whitby, for the first time, the privilege of sending one member to the House of Commons. Registered electors, in 1839-40, 412.

Whitby abbey, which, having been destroyed by the Danes, was rebuilt after the conquest, appears to have been a magnificent edifice. The ruins, in a commanding situation on the cliff near the church, are of considerable extent, and exhibit different styles of architecture. The neighbourhood of Whitby abounds with natural curiosities. In the alum rocks are found an immense variety of petrified shells, trunks of trees, pieces of wood, bones of fishes, &c., and several highly interesting specimens of the large marine animals called *ichthyosaurus* and *plesiosaurus*, with fossil crocodiles, of which the finest hitherto discovered adorns the Whitby museum, which is particularly rich in specimens of the various organic remains found in the vicinity.

The country about Whitby is highly picturesque, and the beautiful valley of the Esk is also rich in ironstone of superior quality, with an admixture of lime. This has become of late an article of export to the iron works on the Tyne to the extent of from 20,000 to 30,000 tons a year. Freestone of several varieties, for building and engineering purposes, is also extensively exported to the London and other markets on the E. coast, as is also the whinstone (found in the same vicinity), for the repairing of roads when broken, and paving of streets, when shaped into blocks, for which purposes it is considered superior to granite. It is only since the formation of a railway from Whitby to Pickering, opened in 1836, that these mineral stores have been developed and made available. This railway passes for 24 m. through a succession of varied and highly picturesque scenery, affording, perhaps, the most beautiful ride of the kind in the kingdom. It is worked by horse power, and through its medium there is a daily communication (except on Sundays) with York. There are also daily coaches to and from Scarborough and the North. Since the opening of the railway, the fishery at Whitby has very materially increased. There are several mineral springs in the neighbourhood. Good lodgings may be had in the summer and autumn, rendering Whitby a desirable place of resort, where gaiety is not the only object. Market-day, Saturday. Fairs, August 25 and Martlemans day. (*Private Information.*)

WHITCHURCH, a market town and par. of England, co. Hants, hund. Evingar, in div. Kingsclere, on the road from London to Salisbury, 12 m. N. Winchester. Area of par., 7630 acres. Pop. of do. in 1831, 1673. The town is quite insignificant, and would be wholly unworthy of notice in a work of this kind; were it not for the fact of its having sent two members to the House of Commons from the 27th year of Elizabeth unto the passing of the Reform Act, by which it was disfranchised. The living is a vicarage, worth £140 a year, in the gift of the Bishop of Winchester. An endowment to the amount of £102 a year is applied to the purchase of bedding and clothing for the poor.

A little to the E. of the church, near the London road, are the paper mills, at which the paper for the notes of the Bank of England has been manufactured since the reign of George I. down to the present time.

WHITCHURCH, or BLANCHMINSTER, a market town and par. of England, co. Salop, hund. E. Bradford, on the borders of Wales and Cheshire, 18 m. N. by W. Shrewsbury. Area of par., 15,380 acres. Pop. of do., in 1831, 5819. The

## WHITE.

town is built on an acclivity, the summit of which is crowned by the church, a freestone edifice, erected in 1722 in the Tuscan order, with an embattled square tower 108 feet in height. The interior is handsome, and it has a good altarpiece, and two recumbent stone figures brought from the ruins of the old church, one of which represents Talbot, earl of Shrewsbury, celebrated for his exploits in the wars with France under Henry V., and immortalized by Shakspeare in the 1st part of Henry VI. The living, a rectory, united with the rectory of Marbury, in Cheshire, is in the gift of the Countess of Bridgewater, and is one of the most valuable in the county, being worth £1458 a year nett. Here also are chapels for Unitarians, Baptists, Independents, Wesleyans, &c., and public schools and charities having an aggregate income of above £900 a year. The grammar-school, which has an income of above £450 a year, instructs a certain number of boys, free of expense, in classics and mathematics, writing and accounts being paid for separately. The master and usher are allowed £312 12s. a year. (*Digest, &c. of Charity Reps.*) Courts leet and baron are held in the town hall by a high steward appointed by the lord of the manor. The inhab. of Whitechurch are principally engaged in the malt and hop trade, in the manufacture of shoes, and lime and brick making. The Ellesmere canal comes up to the town. Markets on Fridays; fairs, four times a year, for farming stock, linen, and hempen and some woollen cloths. (*Parl. Rep. &c.*)

WHITE r., Vt. rises by one of its branches in Williamstown, in the same swamp with Steven's branch of Onion or Winooski r. It has several other branches, all of which afford water-power. It is about 55 m. long and enters Connecticut r. in Hartford, Vt. A road passes along White r., and Winooski r., from Connecticut r. to lake Champlain, with no high hills, though it passes through the Green mountains. The country affords great facilities for a railroad. A canal also might probably be practicable.

WHITE r., Ia. is composed of the East and West Forks, which can be made navigable 150 m. above the junction, which is 30 m. from its mouth. The West Fork is navigable for steamboats, in high water, as far as Indianapolis, and for flat boats much farther.

WHITE r., Ark., rises by the Buffalo fork in Washington co. Ark., and flows N.E. into Missouri, and by a broad sweep to the N. and E. it turns southwardly and again enters Ark. Its course is then S.E. to its junction with Big Black river, which proceeds from the N. in Missouri. The junction takes place on the W. border of Jackson co. It then flows S. by E., receiving Little Red r. on the W. side and Cache r. on the E. side, and enters Mississippi r. about 20 m. above the mouth of the Arkansas. Five miles from the mouth of White r. there is a bayou or gut which connects it with the Arkansas r., 25 m. from its mouth, with the current setting alternately from the one river to the other, as the flood in either may predominate. White r. has a very winding course, and is boatable 500 miles, a considerable part of the year.

WHITE, county, Tenn. Situated in the central part of the state, and contains 672 sq. m. Drained by Capey fork of Cumberland river, and its branches. It contained in 1840, 9709 neat cattle, 8970 sheep, 34,277 swine; and produced 51,082 bushels of wheat, 6691 of rye, 405,149 of Indian corn, 85,899 of oats, 15,563 of potatoes, 23,014 pounds of tobacco, 8193 of cotton, 1096 of sugar. It had eight stores, two forges, 10 flouring-mills, 21 grist-mills, 13 saw-mills, 68 tanneries, 32 distilleries, three potteries, one printing-office, one weekly newspaper. Pop.: whites, 9640; slaves, 933; free coloured, 174; total, 10,747. Capital, Sparta.

WHITE, county, Ia. Situated toward the N.W. part of the state, and contains 530 sq. m. Drained by Tippecanoe river and its tributaries. It contained in 1840, 3617 neat cattle, 2254 sheep, 6071 swine; and produced 17,981 bushels of wheat, 124,782 of Indian corn, 36,528 of oats, 7849 of potatoes. It had two flouring-mills, 53 saw-mills; five schools, 95 scholars. Pop. 1832. Capital, Monticello.

WHITE, county, Ill. Situated toward the S.E. part of the state, and contains 480 sq. m. Bounded E. by Wabash river. Drained by Little Wabash river and its branches. It contained in 1840, 6912 neat cattle, 6602 sheep, 30,987 swine; and produced 32,953 bushels of wheat, 382,710 of Indian corn, 42,262 of oats, 6232 of potatoes, 68,061 pounds of tobacco, 2208 of cotton. It had one commission house in foreign trade, 20 retail stores, two flouring-mills, eight grist-mills, four saw-mills, seven tanneries, three distilleries; 14 schools, 352 scholars. Pop. 7919. Capital, Carni.

WHITE, county, Ark. Situated a little N.E. the centre of the state, and contains 1000 sq. m. Bounded E. by White river. Drained by Little Red river. It contained in 1840, 3155 neat cattle, 367 sheep, 3827 swine; and produced 327 bushels of wheat, 37,910 of Indian corn, 1745 of oats, 3879 of potatoes. It had three stores, five grist-mills, one saw-mill. Pop.: whites, 841; slaves, 88; total, 929. Capital, Searcy.

## WHITEHAVEN.

WHITE CREEK, p. t., Washington co., N. Y., 12 m. S. Salem, 43 N.E. Albany, 413 W. Bounded W. by Owl creek, a tributary of Hoosic river. It contains four churches, a Presbyterian, two Baptist, and a Friends, eight stores, one fulling-mill, two woollen-factories, two grist-mills, four saw-mills; eight schools, 230 scholars. Pop. 2195.

WHITE-DEER, t., Union co., Pa. Bounded E. by the W. branch of Susquehanna river. Drained by White Deer creek. It has two stores, two fulling-mills, two grist-mills, six saw-mills, one oil-mill, two tanneries, two distilleries; five schools, 500 scholars. Pop. 1252.

WHITEFIELD, p. t., Lincoln co., Me., 14 m. N. Wiscasset, 16 S.E. Augusta, 602 W. Drained by Sheepscot river. It has seven stores, two fulling mills, six tanneries; 16 schools, 917 scholars. Pop. 2150.

WHITEHALL, p. t., Washington co., N. Y., 21 m. N. Sandy hill, 73 N. Albany, 443 W. Bounded N. by Poultney river, lake Champlain, and South bay. At the entrance of Wood creek into lake Champlain, and the N. termination of the Champlain canal, is the village, finely situated for commerce by the lake and canal. Two large and elegant steamboats ply to St. John's, Canada, stopping at Burlington and other intermediate places. It contains two churches, a Presbyterian and Methodist, and societies of Baptists, Universalists and Roman Catholics. A considerable number of sloops, schooners and canal boats belong to the place. The town contains 27 stores, one grist-mill, two saw-mills, one tannery, one printing-office, one weekly newspaper; three academies, 164 students; 16 schools, 839 scholars. Pop. 3813.

WHITEHAVEN, a parl. bor. and seaport town of Engco. Cumberland, about 3 m. N.E. from St. Bees head, and 35 m. S.W. Carlisle; lat. 54° 32' 50" N., long. 3° 34' 56" W. Pop. of the parl. bor., which includes the village of Preston, to the S. of the town, and a small rural district, in 1831, 16,694. The creek, on which the town is situated, is surrounded on the land side by heights which approach close to the buildings. It is regularly laid out; the streets, which are of considerable width, cross each other at right angles, but they are, at the same time, ill-paved and dirty; and though there are many good houses and shops, a considerable proportion of the labouring population live in cellars. Among the public buildings are the three churches or chapels of St. Nicholas, St. James, and Trinity; the first erected in 1693, the second in 1752, and the third in 1715; the livings, which are perpetual curacies, worth respectively £188, £200, and £250, are in the gift of the earl of Lonsdale, on whose estate the town is built. Here also are chapels or meeting-houses for Methodists, Presbyterians, Anabaptists, Roman Catholics, &c. The educational establishments comprise a marine school for 60 boys, erected on ground given by Lord Lonsdale, and endowed by a citizen of the town; a national and an infant school, &c. It has also, a theatre, erected in 1769, a subscription library and news-room, a custom-house, market-house, an infirmary, a dispensary, cold and hot baths, &c. There are dry docks and patent slips for the building of ships, which is carried on to a considerable extent; and there are considerable manufactures of sail-cloth and cordage, copperas, tobacco-pipes, &c.; with a small soap-work, and iron and brass foundries. It has also two weekly newspapers, and two joint stock banks.

The harbour, formed by piers, constructed at different periods, dried till recently at low water; but it has been so much improved by the construction of a new pier on its S. side, projecting N., that a portion of it has now 9 feet water at low ebb, and above 20 feet at springs. Harbour light-houses have been erected on the outer and inner pier-heads.

Whitehaven, which, in the beginning of the 17th century, was a miserable fishing village, is wholly indebted for its rise and importance to the working of the coal mines in its vicinity, belonging to the earl of Lonsdale. Some of these mines extend below the sea; and in the largest of them all, the William Pit, about 500 acres are excavated under the sea, the distance being about 2½ m. from the shaft, 110 fathoms deep, close to the shore, to the remotest part of the workings. There is, in this immense pit, a stable under the sea for 45 horses. (*Appendix, i, 299, to Report on Employment of Children in Mines.*) A new pit is now being sunk which, when completed, will run some miles under the sea, and will be the deepest in the country. The coal, which is of excellent quality, is principally shipped coastwise for Dublin, the Isle of Man, and the S. of Scotland. Thus, in 1841, the exports of coal coastwise from Whitehaven amounted to 451,370 tons; and those to foreign ports to 23,478 tons. Exclusive of its coal, Whitehaven exports considerable quantities of lime, freestone, iron ore, &c.; and carries on a considerable trade with the W. Indies, N. America, and other foreign countries. Gross customs' revenue in 1840, £92,832. The town, however, is not flourishing, and both its trade and population have latterly declined; a consequence, most probably, of the superior facilities enjoyed by Liverpool, both as respects the

## WHITELEY.

trade with Ireland, and that with the West Indies, America, &c. The shipping of the port has fallen off materially during the last dozen years; still, however, it had, in 1842, 387 ships, of the burden of 62,115 tons. A piece of ground in the neighbourhood of the town, the gift of Lord Lonsdale, has been fitted up for bowls and other games.

The government of the town, and the care of the docks and harbour, is vested, under an act of Queen Anne, in 21 trustees, 14 of whom are chosen every three years by the inhabitants carrying on trade and paying harbour dues; and six are nominated by the lord of the manor (earl of Lonsdale), who, being himself added to the list, completes the number. Courts-leet are held annually, and courts-baron monthly: the latter decide in cases of 40s. and under; petty sessions are also held by the county magistrates. Markets, Tuesdays, Thursdays, and Saturdays.

The Reform Act conferred on this town, for the first time, the important privilege of sending one member to the House of Commons. Registered electors in 1830-40, 508.

Adjoining the town on the E. side is Whitehaven castle, a seat of the earl of Lonsdale. The town is in the parish of St. Bees, about 4 m. from the village of that name, in which are two valuable institutions; the one being a college where persons of limited means are prepared for the church, and the other a richly endowed foundation school, affording great advantages to the youth of the neighbourhood.

A lighthouse of the first class has been erected on St. Bees-head. It exhibits a fixed light elevated 333 feet above the level of the sea. (*Parl. Papers; Private Information.*)

WHITLEY, p. t., Greene co., Pa. Drained by Whiteley creek and branches of Dunkard's creek. It has 10 stores, one woollen factory, three grist-mills, three saw-mills, three tanneries, three distilleries; seven schools, 114 scholars. Pop. 2043.

WHITLEY county, Ky. Situated in the S.E. part of the state, and contains 600 sq. m. Watered by Cumberland river and its branches. It contained in 1840, 6174 neat cattle, 5059 sheep, 15,991 swine; and produced 4949 bushels of wheat, 191,170 of Indian corn, 35,099 of oats, 9459 of potatoes, 8297 pounds of tobacco, 14,725 of cotton, 2418 of sugar. It had 10 stores, 44 grist-mills, five saw-mills, eight distilleries; two schools, 44 scholars. Pop.: whites, 4508; slaves, 146; free coloured, 19; total, 4673. Capital, Williamsburg.

WHITLEY, county, Ia. Situated toward the N.E. part of the state, and contains 324 sq. m. Drained by Eel river and its branches, which afford water-power. It contained in 1840, 9207 neat cattle, 407 sheep, 3067 swine; and produced 5688 bushels of wheat, 27,135 of Indian corn, 3074 of oats, 90,091 of potatoes, 22,595 pounds of sugar. It had two stores, one grist-mill, three saw-mills; one school; 30 scholars. Pop. 1237. Capital, Columbia.

WHITE MARSH, p. t., Montgomery co., Pa., 11 m. N.W. Philadelphia, 104 E. Harrisburg, 150 W. Drained by Wislaticum creek. It contains an Episcopal church, 12 stores, one fulling-mill, two cotton-factories with 72 spindles, five flouring-mills, one grist-mill, two saw-mills; six schools, 246 scholars. Pop. 2079.

WHITE MOUNTAINS, N. H. Situated in the southern part of Coos co. These mountains extend about 20 m. from S.W. to N.E., being the more elevated parts of a range extending many miles in that direction. Their base is 8 or 10 m. broad, and they are 25 m. S.E. from Lancaster, 70 N. Concord, 82 N. by W. Portsmouth, in 42° 15' N. lat., and 71° 20' W. long. Until recently they were regarded as the highest land in the United States E. of the Rocky mountains; but it has been ascertained that there are higher peaks in Yancey co., N. C. Although distant more than 60 m. from the nearest part of the Atlantic coast, their snow-white summits are distinctly visible many leagues at sea, and along the coast of Maine. Mount Washington, the highest peak, has been found by barometrical measurement to be 6234 ft. above the level of the sea, and its base to be 1770 ft. Black mountain, in Yancey co., N. C., is 6476 ft. and therefore a little higher. Mount Washington is easily known by its being the southern of the three highest peaks. The other peaks are Adams, 5328 ft.; Jefferson 5053; Madison, 4866; Monroe, 4711; Franklin, 4356; and Pleasant, 4339 ft. Mount Washington is frequently visited by travellers, who commonly ascend by the S.E. side, commencing at the town of Conway, and following the course of Saco river, which rises high in the mountain. After climbing up the mountain for a considerable distance, the trees begin to diminish in height, till at the elevation of about 4000 ft. you come to a region of dwarfish evergreens, horizontal branches, closely interwoven with each other, and surrounding the mountain with a formidable edge. On emerging from this thicket you are above all woods, at what is called the bald part of the mountain, which consists of a huge pile of naked rocks of granite and gneiss.

## WHITHORN.

After attaining its summit, the traveller is recompensed for his toil, if the sky be clear, by a prospect wonderfully grand and picturesque. Innumerable mountains, lakes, ponds, rivers, towns, and villages, meet the delighted eye, and the dim Atlantic stretches along the eastern horizon. To the N. are seen the lofty summits of Adams and Jefferson, and to the E., a little detached from the range, stands mount Madison; far to the N.E. the Katahdin mountains are visible near the sources of Penobscot river; on the W. the Green mountains in Vermont; and 120 m. to the S.W. the lofty Monadnock in N. H. Among the near picturesque objects are Umbagog and Winnepesaukee lakes, Androscoggin and Connecticut rivers, and numerous smaller lakes and streams. Beneath and around, the mountains extend many miles from the summit, in every direction, resembling in their shape the waves of the sea in a storm. The elevated summits of the White mountains are covered with snow 9 or 10 months in the year. The Notch or Gap, on the W. side of the mountain, is a deep and narrow defile, extending two miles in length, between two huge cliffs. The entrance of the chasm is formed by two rocks standing perpendicular, at the distance of 22 ft. from each other; the one about 20 ft. high, and the other 12 ft. The road from Lancaster, N. H. to Portland, Me. passes through this notch, following the course of the head stream of the Saco. The mountain, otherwise a continued range, is here cloven down to its base, opening a passage for Saco river. The gap is so narrow, that a space has with difficulty been found for a road. Several brooks, the tributaries of the Saco, fall down the sides of the mountains, forming a succession of beautiful cascades, some of them within sight of the road, presenting the wildest and most romantic scenery. The White mountains belong to a range which extends southwardly to Belchertown, Mass., where it divides into two branches, called the Lyme range and mount Tom range.

WHITE PLAINS, p. t., semi-capital of Westchester co., N. Y., 129 m. S. Albany, 254 W. Drained by Bronx river and Mamaroneck creek. The village contains a courthouse, jail, county clerk's office, four churches, two Methodist, an Episcopal, and Presbyterian, an academy, a female seminary, three stores, a printing-office, issuing a weekly newspaper, 80 dwellings, and 650 inhabitants. It is built chiefly on one wide street. In the town are four academies, 100 students, four schools, 102 scholars. Pop. 1087.

WHITESIDES, county, Ill. Situated in the N.W. part of the state, and contains 770 sq. m. Watered by Rock river and its branches. It contained in 1840, 2882 neat cattle, 765 sheep, 6751 swine; and produced 27,206 bushels of wheat, 80,680 of Indian corn, 26,886 of oats, 33,918 of potatoes, 1020 pounds of sugar. It had 12 stores, four grist-mills, 12 saw-mills; eight schools, 194 scholars. Pop. 2514. Capital, Lyndon.

WHITESTOWN, p. t., semi-capital of Oneida co., N. Y., 36 m. W. N.W. Albany, 392 W. Drained by Mohawk river and Sanquoit creek. The village, situated at the confluence of the above streams, contains a courthouse of brick, a jail, an academy, the Oneida institute, a manual labour seminary, which has a president and several professors, and a farm of 114 acres, on which is a number of commodious buildings. The whole expense of the student, excepting clothing, is \$32 60 cents per year. There are in the village three churches, a Presbyterian, Baptist, and Methodist, 20 dwellings, and about 1600 inhabitants. In the town are 24 stores, 10 fulling-mills, five woollen-factories, two cotton-factories with 15,100 spindles, two flouring-mills, two grist-mills, five saw-mills, one oil-mill, one paper-mill, two tanneries, one printing-office, one weekly newspaper; two academies, 284 students, 15 schools, 851 scholars. Pop. 3159.

WHITE SULPHUR SPRINGS, p. v., Greenbrier co., Va., 205 m. W. by N. Richmond, 242 W. This is the most celebrated watering-place of the south. The spring discharges 18 gallons of water per minute, at a uniform temperature of 60 degrees of Fahrenheit. It contains sulphate of lime, sulphate of soda, carbonate of magnesia, chloride of calcium; sulpho-hydrate of sodium, carbonate of lime, chloride of sodium, per-oxide of iron, organic matter, iodine, sulphate of magnesia, phosphate of lime, and precipitated sulphur. The gaseous contents are carbonic acid, sulphuretted hydrogen, oxygen and nitrogen. It is found to be very efficacious in dyspepsia, liver complaints, jaundice, gout, rheumatism, diseases of the skin, and various other complaints. The accommodations are elegant and extensive, sufficient for 1500 persons. From 4000 to 6000 persons visit it annually; the water is extensively exported, and retains its most valuable properties when removed from the spring. The Sharon springs in Scholario co., N. Y., are said strongly to resemble the White Sulphur springs in Greenbrier co., Va., and are also much and increasingly frequented.

WHITHORN, a royal and parl. bor. of Scotland, co. Wig town, the Burrow Head, the S.E. extremity of the co., and one of the principal headlands on the S. Scottish coast.

## WHITHORN.

being within the parish. Pop. of the bor., in 1841, 1513. The latter, about 4 m. N.N.W. from the Burrow Head, and 3 m. N.W. from its harbour at Isle of Whithorn, built partly on level ground and partly on a gentle acclivity, consists principally of one long and generally wide and well kept street, intersected in the middle by a rivulet concealed by a bridge the entire width of the street. The houses, which are all of stone, and mostly covered with slate, have been greatly improved of late years, many of those that were old and inferior having been pulled down, and replaced by others of a superior quality. The present church, on a rising ground, a little W. from the main street, was built in 1822. It is a substantial and commodious edifice; but is totally devoid of architectural beauty, forming in this respect, a striking contrast to most of the churches latterly erected in this part of the country. Here also are places of worship for members belonging to the Associate Synod, and the Reformed Presbyterian Synod, and for Roman Catholics. The last two, however, have no settled pastors; and the individuals attached to their communion are widely dispersed over the country. The parish school is in a very efficient state, and there are several other schools, and a subscription library. The only public building is the town-house and jail, surmounted by a tower and spire without any pretensions to elegance; the jail is, also, ill-contrived and defective. Except the tanning of leather, which is carried on to some extent, the town has no manufactures; the inhabitants being either retail dealers, tailors, shoemakers, and other tradesmen, required for the accommodation of the surrounding district, or agricultural labourers. Some of them have small patches of land close to the town, for which they pay high rents. Two branch banks have, of late years, been opened in the bor. The inferior houses are mostly occupied by Irish immigrants, who are very numerous in this part of the country.

Whithorn was made a royal bor., by James IV., in 1511. It is governed, under the Municipal Reform Act, by a provost, two bailies, and 15 councillors. Corporation revenue, in 1839-40, £230 11s. 4d. It unites with Wigtown, Stranraer, and New Galloway, in sending one member to the House of Commons. Registered electors in the bor., in 1841-42, 54.

Whithorn, which is of high antiquity, is supposed to be identical with the Leucophibia of Ptolemy, and is certainly the Candida Casa of the venerable Bede. It was early distinguished in ecclesiastical annals, from the circumstance of a church being founded here late in the 4th or early in the 5th century, by St. Ninian, who was buried within its walls. At a later period, or in the 12th century, a magnificent priory for monks of the Premonstratensian order was erected here by Fergus, lord of Galloway, of which there still remains a fine Saxon arch, embodied in the wall of the old par. church, and some extensive vaults. The real, or supposed, relics of St. Ninian having been collected in this building, it was regarded with feelings of extraordinary veneration, and was, for a lengthened period, a place of pilgrimage and adoration. Several of the kings and queens of Scotland were among the number of its visitors. On one occasion, James IV. made a pilgrimage thither, on foot, to secure the good offices of the saint in behalf of his queen, then dangerously ill! The bishopric of Galloway, or Whithorn, was one of the oldest in Scotland; and this was a principal residence of the bishops till the abolition of the see. (*Murray's Literary Hist. of Galloway*, Append. p. 332.)

The *Isle of Whithorn*, about 2 m. N.N.E. from the Burrow Head, and 3 m. S.E. from the bor., may be regarded as the seaport of the latter. The isle, now united to the mainland by a causeway, is of very limited dimensions, not probably exceeding 30 or 40 acres. The village, which is built partly on the mainland and partly on the isle, has about 450 inhabitants. The par. church is at Whithorn, and there is not, at present, any place of worship in the village. This, however, had not been the case formerly, there being on the isle the ruins of a small church said, though probably on no good grounds, to be one of the oldest in Scotland. A little ship-building is carried on; and there is some trade in the shipping of corn and other products to Liverpool and Whitehaven, and in the importation of coal, slates, freestone, timber, &c. In the angle between the W. side of the island and the mainland is the harbour. The only danger in entering is the *screens*, a ledge of rock, overflooded at high water, bounding the harbour on the S.W. But there is a broad channel between the extremity of the screens and the isle. Small vessels may run in at any time, and anchor within the screens till the tide makes, when there is water to bring large ships to the pier. The latter, constructed about 40 years ago, by means of a grant made by the convention of royal bors., is a very considerable and useful work. At high springs there are from 18 to 20 ft. water at the pier, and at neaps from 12 to 14 ft. The ground at the pier-head, and in the harbour is soft, so that vessels are but

## WICK.

little injured by grounding. The steamers from Liverpool and Whitehaven seldom touch at the isle of Whithorn, which is comparatively secluded; but in purity of air and water, mildness of climate, dryness of soil, cheerfulness, and salubrity, it is superior to most bathing-places on the Scottish coast.

It may probably be thought, seeing their limited pop. and importance, that this notice of Whithorn and its port has been extended to an unnecessary length. But not being the number of those who care nothing for the place to which they belong, we may, perhaps be excused, if, towards the close of this lengthened and laborious survey of so many countries and places, we have lingered for a moment over scenes once familiar, and still well remembered. The associations which the mention of this locality calls up are all "redolent of joy and youth," and are too soothing and pleasing to be instantly dismissed.

WHITTINGHAM, p. l., Windham co., Vt., 141 m. S. by W. Montpelier, 423 W. Drained by Deerfield river and its branches. It contains an abundance of limestone, and has a valuable mineral spring. It contains a church, and several religious denominations, five stores, two grist-mills, nine saw-mills, two tanneries; 13 schools, 480 scholars. Pop. 1391.

WICK, a royal and par. bor. and seaport town of Scotland, E. coast of the co. of Caithness, of which it is the cap., on the river Wick, at the bottom of a deep bay, 15 m. S. by W. Duncansby-head. Pop. of par. bor., which includes Wick, Pulteney-town, and Louisburg, in 1841, 4592. Wick, properly so called, or the old town, is on the N. side of the river, and is irregularly and meanly built, and dirty; it has to the N. the suburb of Louisburg, and is connected by a bridge with Pulteney-town, on the S. side of the river. The latter, built on rising ground, feued from Lord Duffus by the British Fishery society, is laid out on a uniform plan, and is one of the handsomest fishing villages that is any where to be met with. Both towns are lighted with gas, supplied by a company recently established. The par. church, at the W. end of the town, with 1835 sittings, was erected, in 1830, at a cost of £4781; but a chapel of ease is now (1842) about being finished in Pulteney-town; and the United Associate Seceders, Independents, Reformed Presbyterians, Roman Catholics, &c., have their respective places of worship. The educational and literary establishments comprise a parochial school, an excellent academy, several unendowed schools, two Sunday schools, a subscription library, two reading-rooms, and a weekly newspaper. Exclusive of the churches, the town-hall, county buildings and prison, and commercial hall, are the principal public edifices.

Wick has been for upwards of half a century the principal seat of the herring fishery of Scotland; and, besides its own boats, its harbour is frequented, in the fishing season, by great numbers of boats from other parts of Scotland, and from Holland. Its port at the mouth of the Wick being small, inconvenient, and unsafe, a new harbour was commenced, in 1810, by the British Fishery society, which they completed at a cost of £14,000, of which £8,500 were defrayed by government. But the accommodation being still insufficient, a new or outer harbour, of larger dimensions, and having deeper water, was completed, in 1831, at an expense of not less than £40,000. In 1840, the town had 765 boats at the fishery, of which 428 belonged to the town, and 337 to other places. The crews of these boats amounted to 3823 individuals; and they are supposed to have given employment to about 4000 other individuals, as gutters, coopers, sailors in coasters for carrying away the fish, &c. There were cured, at Wick, during the year ending the 5th of April, 1840, 91,465 barrels of herrings, being about one sixth part of the total quantity taken and cured in Scotland during the same year, including Sunderland and Whitby. Unluckily, however, the fishery is subject to great fluctuations, above 150,000 barrels having been taken in some years, and in others not more than from 30,000 to 40,000 barrels. In consequence, the business partakes considerably of the nature of a gambling pursuit, and has not the beneficial influence that might otherwise have been expected.

The building of ships and boats, especially the latter, is carried on to a considerable extent; and the town has, besides, four rope-walks, a brewery and a distillery, an iron foundry, &c. The principal, or rather, sole occupation of the females in and round the town consists in the spinning of yarn for, and in the making and mending of herring nets. The trade of the port is limited to the export of herrings, and of corn, wool, cattle, and other farm products, and to the importation of coals, timber, groceries, &c. It has an intercourse by steam with Leith, Aberdeen, Kirkwall, and Lerwick. There belonged to the port, in 1841, 34 vessels, of the aggregate burden of 1753 tons. Gross customs revenue collected at the port, in 1840, £1141. The Commercial bank, and the Aberdeen Town and Country bank, have each branches in the town.

## WICKFORD.

Wick was made a royal bor. by James VI. in 1539. It unites with Kirkwall, Dornoch, Cromarty, and Dingwall, in sending one member to the House of Commons. Registered electors in Wick in 1840-41, 308. It is governed by a provost, two bailies, and nine councillors. Incorporation revenue, in 1840-41, £214 4s.

The country in the vicinity of Wick has been very greatly improved within the last half century: even so late as in 1790, there was not a cart in the county, nor potatoes, turnips, nor rye-grass; and such a thing as a rotation of crops had not then been heard of. The land was split into minute portions, and held under a system subversive of all industry and improvement. The advance in the interval has been astonishingly great; and though there are still an excess of small occupiers, their numbers are gradually decreasing; and all sorts of improvements have been introduced, and are extending themselves on all sides. To show the increase in the value of land, it may suffice to mention that the estate of Hemprigs, in the parish of Wick, let in 1753 for £642, was let in 1830 (exclusive of Pulteney-town) for £5608! (*New Statistical Account of Scotland*, art. Wick; *Official Returns*, &c.)

WICKFORD, p. v., North Kingston t., Washington co., R. I., 22 m. S. Providence, 401 W. Situated on a peninsula or point of land on the W. side of Narragansett bay, and has a good harbour. It has considerable trade, and a number of vessels employed in the coasting and West India trade and the fisheries. It contains three churches, a Baptist, Episcopal, and Friends, a town-house, a bank, 30 stores and 100 dwellings. The Washington academy, here located, has a substantial and elegant edifice, 69 by 30 ft., on elevated ground, a little out of the village, encircled with trees, giving it a romantic and rural appearance. It contains a valuable library.

WICKLOW, a marit. co. of Ireland, prov. Leinster, having N. the co. of Dublin, E. St. George's Channel, S. Wexford, and W. Carlow and Kildare. Area, 494,704 acres, of which 94,000 are unimproved mountain and bog. This is a very mountainous county. In some places it is well wooded, and extremely picturesque and beautiful. Estates mostly large; the most extensive, valuable, and best cultivated belongs to Earl Fitzwilliam. Farms of various sizes; many small. Average rent of land, 12s. an acre. Speaking generally, rents are much too high; the labouring population not half employed; and their condition, and that of the small farmers, as bad as possible. But little wheat is raised, and that principally in the E. parts of the county. Wicklow has to boast of considerable mineral treasures; and some gold has been found in stream-works in different parts of the county. These, however, have been wholly abandoned, the produce of metal being insufficient to repay the expenses. From 600 to 900 persons may be employed in the copper mines of Cronebane, Ballymurnagh, Conroree, &c. The ores are shipped at Wicklow, and are smelted in Wales. Bismuth, manganese, zinc, &c., have also been met with, but in inconsiderable quantities. Marl is very abundant in parts of the county, and is said to have wonderfully increased the fertility of some districts. Principal rivers, Slaney, Fustia, and Ovoca. Wicklow contains six baronies, and 58 pars.; and returns two members to the House of Commons, both being for the county. Registered electors for the latter, in 1839-40, 2340. In 1841, Wicklow had 18,412 inhabited houses, 19,970 families, and 121,557 inhabitants, of whom 61,052 were males, and 60,505 females.

WICKLOW, a marit. town of Ireland, prov. Leinster, co. Wicklow, of which it is the cap., at the mouth of the Vartry, 23 m. S. by E. Dublin, and 24 m. W. by N. Wicklowhead, on which there are two lighthouses with fixed lights. Pop. in 1831, 2472. This, the poorest of assize towns, is irregularly built, and principally derives its means of support from the concourse of persons on county business, and for bathing during the summer months. Its public buildings comprise the par. church, a Roman Catholic chapel, meeting-houses for Methodists and Quakers, the court-house and prison for the county, diocesan school, market-house, county infirmary, fever hospital, &c. Races are held annually on the Morrough, a flat sandy tract, extending several miles along the shore. The corporation, under a charter of James I. in 1613, consisted of a portreeve, 12 burgesses, and a commonalty, which returned two members to the Irish House of Commons till the union, when the bor. was disfranchised. The assizes for the county, general sessions and petty sessions, and a weekly court for the adjudication of small debts, are held here. The town is a constabulary and coast guard station. Markets on Saturdays; fairs March 28, May 24, August 12, and November 25. The harbour is fit only for small craft, having a bar at its entrance which has only 9 ft. at high water springs, and 6 ft. at neaps. It has, however, some trade in the shipping of copper ore, corn, &c.; the value of its exports, in 1835, being £86,566. Post-office revenue in 1830, £242; in 1836, £356.

WIDIN or VIDIN, a fortified town of Bulgaria, cap. san-

## WIGAN.

jack, on the Danube, 130 m. S.E. Belgrade. Pop. estimated at from 20,000 to 25,000, being one of the most populous towns in this part of Turkey. It presents an imposing appearance from a distance, having numerous mosques and minarets; and its streets, though equally dirty, are said to be broader than in most other Turkish towns. It is the residence of a pacha of three tails, and a Greek archbishop; its trade is principally in rock salt, corn, wine, and other products of the surrounding territory. Its fortifications are in a pretty good state of repair, and it is one of the strongest towns in Turkey. (*Bouté*, ii. 336; *Dict. Geog.*, &c.)

WIESBADEN, a town of W. Germany, cap. of the duchy of Nassau, and one of the most frequented watering places in the confederation; on an affluent of the Rhine, 4 m. N. from the latter, and 6 m. N.N.W. Mentz. Its resident pop. was, in 1831, under 10,000; but during the height of the season, the total number of its inhabitants has sometimes exceeded 25,000. The interior of Wiesbaden is badly laid out; but in its outskirts are many good streets and terraces. Being the seat of the government, superior courts, &c., of the duchy, it has some showy public edifices, including the ducal residence, the infantry and new artillery barracks, mint, Roman Catholic church, theatre, &c. But most of its buildings consist of hotels and lodging-houses for the accommodation of visitors; its chief prosperity and consequence being derived from its baths and mineral waters. These, the *Aque Mattiaci* of Pliny, are hot saline springs, containing muriate and sulphate of soda, muriate and carbonate of lime, muriate of magnesia and potassa, with some silica, oxide of iron, and free carbonic acid. There are fifteen different springs; the principal of these is the *Kockbrunn* or "boiling spring," though its temperature is not boiling, but only about 158° Fahr. The other springs are not so hot, but all have the same general character, and are efficacious in cases of gout, rheumatism, paralysis, rigidity of the skin, &c. The usual time for drinking the waters, and taking baths, is from the middle of June to the end of August, during which all the usual attractions of a watering place are to be met with. The chief scene of gaiety is the *Kursaal*, a large edifice, with a central Ionic portico, which encloses, with its two wings, three sides of a spacious lawn, and comprises many magnificent apartments, including a noble saloon about 140 ft. in length, and 50 in height. A band of music attends here every day during the season, and the *table d'hôte* is well and respectfully attended. Besides this establishment, Wiesbaden has a public library with 45,000 vols., museums of antiquities, and paintings, a well managed hospital, &c.; with manufactures of chocolate, sealing wax, and glue. The climate is very hot and oppressive in the height of the summer, and there is a deficiency of good ordinary drinking water; but the neighbourhood is very pleasant, and abounds with fine views and vineyards. Numerous Roman antiquities have been discovered in and about the town. (*Granville's Spas of Germany*; *Schreiber, Guide du Rhin*; *Chambers' Tour*; *Murray's Handbook for N. Germany*; *Berghaus*, &c.)

WIGAN, a parli. and mun. bor., market town, and par. of England, co. Lancaster, hund. W. Derby, on the Douglas, in the centre of an extensive coal-field, 17 m. N.E. by R. Liverpool, and 17 m. N.W. Manchester. The limits of the old parliamentary and municipal bor. were not affected by the Boundary and Municipal Reform acts, and are co-extensive with the township of Wigan, which has an area of 2170 acres, and had, in 1831, a pop. of 20,774, and in 1841, of 25,517. The town, situated on a hill, is spread over a large extent of ground; and though irregular, is pretty well built; its appearance, however, is not prepossessing, as the employments carried on in it, and the abundance of coal, give it a dirty, blackened look. Of late years its manufactures, buildings, and population have rapidly increased; several new streets, containing many good houses, have been erected; the approaches have been improved; and the whole town, which has been widely extended, especially towards the E., has every indication of augmenting wealth and prosperity. The charge for lighting, watching, and police, is defrayed by private subscription; and an ample supply of water is furnished by an incorporated company. The par. church is a stately old edifice, in the perpendicular style, with a handsome square tower; its interior is spacious and lofty, and it has several fine ancient monuments. Except on the S.W., it is closely surrounded by buildings. The living, one of the most valuable rectories in the county, being worth £2230 a year, is in the gift of the earl of Bradford. Besides a chapel-of-ease and eight places of worship for Protestant Dissenters, there are two large and handsome Roman Catholic chapels. The town-hall, in a small market-place, nearly in the centre of the town, a large brick edifice, was rebuilt in 1720, and has a colonnade, added in 1828; the moot or sessions-hall was rebuilt in 1829. Here, also, is a large commercial-hall, for the sale of woollen and cotton goods and hardware, erected in 1816; a small bor.

## WIGHT (ISLE OF).

jail, a subscription library, established in 1757; a dispensary, founded in 1795, with a mechanics' institute, savings bank, &c. Towards the N. extremity of the town is a pillar erected in 1679, in memory of Sir T. Tildesley, killed in the engagement at Wigan on the 25th of August, 1650, between the royalists under the earl of Derby, and the parliamentary troops under Colonel Lilburn. The free grammar-school, founded in the reign of James I., has since received various endowments, and is now in the possession of a considerable income. It is conducted under an act passed in 1812, and affords instruction to numerous scholars in classical learning, mathematics, the modern languages, &c. Here, also, is a blue-coat school, established in 1773; a school of industry, established in 1823, for the education of girls for domestic servants and housewives; and numerous Sunday schools. The income arising from private legacies for the education and apprenticing of children, and general relief of the poor, amounts to between £350 and £450 a year.

The principal branches of industry carried on in the town comprise the carding and spinning of cotton, the weaving of muslins, calicoes, fustians, &c., by power and hand-loom; the manufacture of coarse linens; and more recently of silks. There are, also, in the parish, bleach works, brass and powder, nail and machine factories, iron foundries, &c. In 1836, there were in the town only 25 cotton factories, which employed 4262 hands; and in 1838, there were at work in the parish 37 cotton factories, which employed 6137 hands, and two flax-mills employing 400 hands. (*Baines' Lancashire; Rep. on Mills and Factories.*)

So early as 1720, an act of parliament was obtained for making the Douglas navigable from Wigan to the Ribble, at the point where the latter empties itself into the sea. This navigation was subsequently purchased by the Leeds and Liverpool canal company, and now forms an important branch of their works, conveying vast quantities of coal from Wigan to Liverpool and the N. of Lancashire. The North Union railway, a branch of the Liverpool and Manchester line, passes through the town to Preston and Lancaster.

Wigan is a bor. by prescription; its earliest extant charter dates from the 3d of Henry III.; but numerous others have been granted by subsequent sovereigns. It sent two members to the House of Commons in the 23d of Edward I.; and made another return 12 years afterwards; but from that epoch till the 16th century, a period of more than 200 years, the privilege remained dormant. At its revival the right of election was vested in the free burgesses by custom, of whom, previously to the Reform Act, there were generally about 100. Registered electors in 1830-40, 565.

Under the Mun. Reform Act, the bor. is divided into five wards, and is governed by 10 aldermen, and 18 councillors. It has a commission of the peace, two courts leet annually, petty sessions three times a week; and in 1841, it was purposed to establish a court of record for the recovery of small debts. Corp. rev. in 1840, £2524. A newspaper, called the *Wigan Gazette*, was first issued in 1836.

Wigan, anciently called Wibegin, though not mentioned in Domesday-book, is certainly of considerable antiquity. A patent for paving the town, and erecting a bridge over the Douglas, was granted in the 7th Edward III. During the civil wars it was zealously attached to the royalists. Dr. Leland, author of a "View of Deistical Writers," and of several other publications, was a native of this town, having been born here in 1691. Market days, Monday and Friday; fairs three times a year, chiefly for cattle, pedlery, and toys. (*Parl. Reps.; Baines' Lancashire, &c.*)

WIGHT (ISLE OF), the *Pectis* of the Romans, an island off the S. coast of England, opposite to, and included in, the co. of Hants, being separated from it by the road of Spithead on the E., and by the Solent, or W. channel, on the W. The E. channel, from below Gosport across to Ryde, is about 3 m. in width; but from Hurst Castle across to the island, the W. channel is little more than 1 m. in width. The figure of the island is rhomboidal, having its shores parallel to the opposite shores of the mainland. From its E. to its W. angle the distance is about 22 m.; and from the N. to the S., about 13 m. Area, 86,810 acres. Pop. of the island, in 1841, 35,431. This is one of the most beautiful districts in the kingdom, being finely diversified with hills, dales, woods, towns, villages, and gentlemen's seats. A range of chalk hills extends lengthwise across the island, affording excellent pasture for sheep, and some very commanding views. The cliffs on the S. coast are bold and precipitous, and hollowed into chasms, the resort of vast numbers of sea-fowl. The cliffs, called the Needles, on the W. angle, are lofty; almost perpendicular, and strikingly picturesque. One of the tallest of these cliffs, being undermined by the action of the waves, was overthrown in 1782, and totally submerged. Climate extremely mild, and, perhaps, the most salubrious of any in England. Soil dry, loamy, and mostly very fertile; being well adapted for all

## WIGTOWN.

sorts of agricultural purposes. The husbandry is similar to that followed on the good soils of the mainland (see HAMP-SHIRE); and the island has large quantities of agricultural produce to dispose of after supplying its own inhabitants. It is divided into two nearly equal parts by the river Medina. Large quantities of fine sand are shipped from Freshwater bay, for the glass and china manufactures in different parts of the country; but it has no other minerals of any importance. Since the opening of the railway from London to Southampton, the isle of Wight has been a great object of attraction, and is visited by crowds of tourists from the metropolis. A constant intercourse is kept up by steam between Southampton and Cowes; and individuals pressed for time may now leave London in the morning, and, after seeing a good deal of the island, return to town in the evening! Under the Reform Act, the isle of Wight sends one member to the House of Commons. Registered electors, in 1839-40, 1167.

WIGTON, a market town and par. of England, co. Cumberland, on the Wiza, 10 m. W.S.W. Carlisle. Area of par. 11,800 acres. Pop. of do. in 1831, 6501. The town, which is commodious and well built, consists principally of a main and transverse street, and has several superior inns and dwelling-houses. The par. church, a handsome building, was erected, instead of an older church, which had become ruinous, in 1788: it has attached to it a spacious Sunday school, built by voluntary subscription in 1820. The living, a vicarage worth £120 a year, is in the gift of the bishop of Carlisle. The grammar-school, established by subscription in 1714, but afterwards endowed, has now an income of above £70 a year: at the time of the late charity inquiry 35 children were taught on the foundation. A hospital for six widows of Protestant clergymen, founded in 1723, has an income of £58 a year; and there are some minor charities. The Wesleyans, Roman Catholics and Friends, have meeting houses at Wigton, and the Friends have, near the town, a school for 60 boys, founded in 1825. Wigton is a place of some manufacturing activity; checks, gingham, muslins, fustians, &c., being made in the town and par., in which about 420 persons were employed as weavers in 1839. The gross average weekly earnings of the weavers at the same period was stated to be 5s. 10d., or nett 4s. 3d. per loom. (*Handloom Rep.*, part v.) Several breweries and tanneries are established here: iron and coal are brought to the town from within a distance of 5 m. Petty sessions are held monthly, and an annual court leet and baron in September. Markets, Tuesday and Friday; the former a considerable corn mart. Large fairs for horses, cattle, Yorkshire cloth, and hardware, Feb. 20 and April 5; and one on Dec. 21, for butchers' meat, apples, and honey. About 1 m. S. Wigton is Old Carlisle, probably a Roman station, of the ruins of which Wigton old church was built. Ewan Clarke, the Cumberland poet, and Sir R. Smirke, were natives of Wigton. (*Parl. Reps.*, &c.)

WIGTOWN, a marit. co. of Scotland, occupying the S.W. extremity of that kingdom, and forming the W. half of the district known by the name of Galloway, has on the S. and W. the Irish sea, N. Argyshire, and E. the Stewartry of Kirkcubright or E. division of Galloway. It contains 293,760 acres, of which about a third part may be arable. Surface hilly, but the hills do not rise to any considerable height. It is divided into three districts, viz. the *Machars*, extending from Wigton and Portwilliam to the Burrow Head; the *Rhynns*, comprising the peninsula formed by Loch Ryan and the bay of Luce, terminating in the Mull of Galloway on the S., and Corsewall Point on the N.; and the *Moors*, or upper district. The soil of the first two districts is, for the most part, a hazely loam, dry, and well adapted for the turnip husbandry; but near the town of Wigton there is a considerable extent of rich alluvial land. The moors, which are bleak and barren, comprise more than a third part of the county. Climate mild but rather moist. Property has, for a long series of years, been gradually accumulating in fewer hands, and is now, for the most part, distributed in large estates held generally under entail; farms middle sized, and uniformly almost let on leases for 19 years. Agriculture in this, as in most other Scotch eos, was formerly in the most barbarous and wretched state imaginable. There was no rotation of crops; the process and implements were alike execrable; and the pasture land was overstocked; and the occupiers steeped in poverty. Mar, of which Galloway contained immense quantities, began to be discovered and applied to the land about 1730; and for a while it caused an astonishing improvement in the corn crops. But their unceasing repetition reduced the soil to its former sterility, and convinced the landlords that marling, which promised so much, and by which so much had been realised, could be of no permanent utility to their estates, unless the tenants were restrained from over-cropping. In consequence, principally of this feeling, but partly also to the diffusion of intelligence as to such subjects, it was the usual practice, previously to the American war, to prohibit

## WILBRAHAM.

tenants from taking more than three white crops in succession; and it was also usual to prohibit them from breaking up pasture land until it had been at least six or nine years in grass. This practice, barbarous as it is, was a vast improvement on that by which it had been preceded; and it prevailed generally throughout Galloway and Dumfriesshire till the beginning of the present century; and in some backward parts lingers even to this day. But in all the best parts of the district two white crops are now rarely seen in succession; and every department of husbandry has been signally improved. Generally, however, the county is more suitable for pasture than for tillage; and it, as well as Kirkcudbright, suffered a good deal from over-cropping between 1809 and 1815. Oats and barley principal crops: wheat, however, is now raised in considerable quantities. Potatoes largely cultivated. Turnips have been long introduced; but it is only since 1825 that their culture has become an object of general and profitable attention; it is now rapidly extending, and large quantities of bone dust are imported as manure for the turnip lands. Farm houses and offices mostly new, substantial, and commodious. Roads new, and for the most part excellent. Breed of cattle polled, and one of the best in the empire. Breed of sheep in the low grounds, various; in the moors, principally the black faced, or Linton, variety. Average rent of land in 1810, 8s. 6d. an acre. Minerals and manufactures, quite unimportant. The condition and habits of the people have been materially improved since the commencement of the late war with France. "They are now more cleanly, more comfortably lodged, and both their diet and their dress are of a better description. They are generally, also, intelligent and well informed. Their morality has also kept pace with the progress of society, and the more extensive diffusion of knowledge." (*New Statistical Account of Scotland*, art. *Wigtown*.) Principal rivers, Cree, Bladnoch, and Luce. It is divided into 17 pars., and returns two members to the House of Commons, viz. one for the county, and one for the bors. of Wigtown, Whithorn, and Stranraer, in this county, with which the inconsiderable bor. of New Galloway, in Kirkcudbright, is associated. Reg. electors for the co., in 1841-42, 998. In 1841, Wigtown had 7440 inhabited houses, and 39,179 inhabitants, of whom 18,258 were males, and 20,921 females.

Wigtown, a royal and parl. bor. and seaport of Scotland, cap. of the above co., on rising ground near the mouth of the Bladnoch in Wigtown bay, 13 m. N.N.W. the Burrow head, and 37 m. W.S.W. Dumfries. The parl. bor., which includes a small village at the bridge of Bladnoch, about 1 m. S. from the town, had, in 1841, a pop. of 1870. This, which is a well situated and well built country town, has been much improved of late years. It consists principally of a main street of great width, the centre of which has been enclosed, and is now occupied with a shrubby, bowling-green, &c. A new and handsome granite cross has, also, been erected within the last few years. The only public building is the town-house and prison, with a low spire at one end. The prison, however, is both insecure and unhealthy; and will most probably be renovated at no distant period. The church, which is old and mean-looking, is situated in a retired churchyard, in which are monuments to various individuals put to death during the persecutions under Charles II., for their adherence to the Covenant. The members of the United Associate Synod and the Relief have, also, meeting-houses: a considerable number of the Irish settlers in the town and parish are Roman Catholics. The educational establishments comprise a well conducted parish school, two unendowed schools, and two Sunday schools. A subscription library, founded in 1794, has a good collection of books. If we except a distillery established at Bladnoch bridge, no manufacture of any kind is carried on in the bor. The harbour, on the Bladnoch, about 3 m. from the town, included in the port of Dumfries, nearly dries at low water, and the navigation is rather difficult. The only trade is in the shipping of corn, cattle, and other farm produce, coastwise for Liverpool and other ports, and in the importation of coal, timber, freestone, &c. The port is visited about once a fortnight by a steamer from Liverpool. A branch bank of the British linen company is established in the town.

Wigtown was made a royal bor. by James III. It unites with Stranraer, Whithorn, and New Galloway, in sending one member to the House of Commons. Registered electors, in 1840-41, 98. Under the Municipal Reform Act, it has a provost, two bailies, and 15 councillors. Corporation revenue, in 1840-41, £367 12s. 7d., principally arising from the rent of land.

A castle and a monastery, both of which were founded in the 13th century, formerly existed here; but few or no traces of either the one or the other are now discoverable. (*Art. Wigtown in New Statistical Account of Scotland; Private Information.*)

WILBRAHAM, Hampden co., Mass., 83 m. W.S.W. Bos-

## WILKINSON.

ton, 308 W. Bounded N. by Chickapee river. The Boston and Springfield railroad passes through its N. part. It contains the Wesleyan seminary, under the direction of the Methodists, founded in 1824. It is an academy of a high order, and generally has over 200 students of both sexes. It contains four churches, two Congregational and two Methodist, four stores, three fulling-mills, three grist-mills, eight saw-mills, two tanneries; one academy, 225 students; 11 schools, 394 scholars. /Pop. 1864.

WILCOX, county, Ala. Situated in the S.W. part of the state, and contains 1200 sq. m. Watered by Alabama river and its tributaries. It contained in 1840, 15,800 neat cattle, 3630 sheep, 38,000 swine; and produced 2450 bushels of wheat, 1050 of rye, 650,000 of Indian corn, 256,510 of oats, 667,417 of potatoes, 28,825 pounds of rice, 1,722,030 of cotton. It had 21 stores, two flouring-mills, 16 grist-mills, 10 saw-mills, three tanneries, one printing-office, one weekly newspaper; five academies, 205 students; 14 schools, 425 scholars. Pop.: whites, 5960; slaves, 9294; free coloured, 24; total, 12,578. Capital, Barsboursville.

WILKES, county, N. C. Situated in the N.W. part of the state, and contains 864 sq. m. Drained by Yadkin river and its numerous branches. It has the Blue ridge on its N.W. border, which has some very elevated summits. It contained in 1840, 13,977 neat cattle, 13,359 sheep, 40,965 swine; and produced 30,268 bushels of wheat, 16,655 of rye, 463,793 of Indian corn, 64,210 of oats, 30,220 of potatoes, 24,567 pounds of tobacco, 12,468 of cotton. It had eight stores, one flouring-mill, 100 grist-mills, 36 saw-mills, one oil-mill, four tanneries, 209 distilleries, two potteries; one academy, 30 students; one school, 20 scholars. Pop.: whites, 10,976; slaves, 1430; free coloured, 171; total, 12,577. Capital, Wilkesboro'.

WILKES, county, Ga. Situated in the E., toward the N., part of the state, and contains 550 sq. m. Bounded N. by Broad river, S. by Little river. Drained by Fishing creek and its branches. Its inhabitants were singularly united in their opposition to British oppression in the Revolutionary war, which caused the county to be denominated by the Tories "the Harnet's nest." It contained in 1840, 9391 neat cattle, 4481 sheep, 15,939 swine; and produced 38,906 bushels of wheat, 288,259 of Indian corn, 64,180 of oats, 6394 of potatoes, 2,345,087 pounds of cotton. It had nine stores, two flouring-mills, 15 grist-mills, four saw-mills, one distillery, two printing-offices, two weekly newspapers and one periodical; one college, 116 students; two academies, 86 students; 14 schools, 300 scholars. Pop.: whites, 3630; slaves, 6501; free coloured, 17; total, 10,148. Capital, Washington.

WILKESBARRE, p. t., capital of Luzerne co., Pa., 127 m. N.E. Harrisburg, 231 W. Wyoming mountain crosses the township centrally, in a N.E. direction, and the country between the mountain and the Susquehanna is a rich alluvial. It is drained by Solomon's and Mill creeks and Laurel run, flowing into Susquehanna river, and Bear creek and its tributaries, flowing into Lehigh river. Solomon's creek has a beautiful cascade of 30 feet fall, 3 m. from the borough. The t. abounds with anthracite coal. *Wilkes-barre borough* is situated on the E. side of Susquehanna river. It is regularly laid out, with streets crossing each other at right angles, with a square of four acres at the centre, the sides of which form an angle of 45 degrees with the street, so that the four principal streets enter the square at its corners. It contains a courthouse, jail, county offices, a bank, three churches, a Methodist, Episcopal, and Presbyterian, an academy, a seminary for young ladies, 22 stores, two furnaces, one flouring-mill, two tanneries, one brewery, one pottery, two printing-offices, one weekly newspaper; two academies, 65 students; seven schools, 330 scholars. Pop. 1718. It was laid out in 1773, under the Susquehanna Land company of Connecticut, and named in honour of Wilkes and Barre, two distinguished friends of the American cause in the British parliament. It is in the beautiful valley of Wyoming, on a plain elevated 18 or 20 feet above the ordinary level of Susquehanna river. It was burned by the British and Indians, under Colonel Butler, in the Revolutionary war. There are in the t., exclusive of the borough, one store, three flouring-mills, two saw-mills, one tannery, one distillery; one academy, 15 students; six schools, 280 scholars. Pop. 1513.

WILKINSON, county, Ga. Situated a little S. of the centre of the state, and contains 430 sq. m. Bounded E. by Oconee river, by branches of which it is drained. It contained in 1840, 6881 neat cattle, 1859 sheep, 16,047 swine; and produced 12,767 bushels of wheat, 140,642 of Indian corn, 5117 of oats, 10,823 of potatoes, 1720 pounds of rice, 1,809,612 of cotton. It had 12 stores, 16 grist-mills, 10 saw-mills, four distilleries; four academies, 159 students; 10 schools, 153 scholars. Pop.: whites, 4957; slaves, 1860; free coloured, 19; total, 6482. Capital, Irwinton.

WILKINSON county, Miss. Situated in the S.W. corner of the state, and contains 550 sq. m. Bounded W. by Mis-

## WILL.

Mississippi river, N. and N.W. by Homochitto river. Drained by Buffalo creek. It contained in 1840, 2219 neat cattle, 9729 sheep, 26,528 swine; and produced 473,693 bushels of Indian corn, 19,635 of oats, 99,565 of potatoes, 4555 pounds of rice, 15,250,907 of cotton. It had 32 stores, nine grist-mills, four saw-mills, three tanneries, one printing-office, one weekly newspaper; six academies, 264 students; five schools, 87 scholars. Pop.: whites, 3209; slaves, 10,894; free coloured, 30; total, 14,193. Capital, Woodville.

WILL., county, Ill. Situated toward the N.E. part of the state, and contains 504 sq. m. Drained by Kankakee river and its branches, and by Desplaines river. It contained in 1840, 9278 neat cattle, 3584 sheep, 15,690 swine; and produced 110,464 bushels of wheat, 173,383 of Indian corn, 1561 of buckwheat, 5729 of barley, 271,587 of oats, 112,482 of potatoes, 8100 pounds of sugar. It had 41 stores, two flouring-mills, five grist-mills, 14 saw-mills, one tannery, one distillery, one printing-office, one weekly newspaper; three academies, 68 students; 35 schools, 1082 scholars. Pop. 10,167. Capital, Juliet.

WILLIAMS, county, O. Situated in the N.W. part of the state, and contains 600 sq. m. Watered by Maumee, Tiffin, Auglaize, and Little St. Joseph rivers. The Wabash and Erie canal passes through its S.E. corner. It contained in 1840, 3662 neat cattle, 1062 sheep, 8225 swine; and produced 29,368 bushels of wheat, 899 of rye, 82,403 of Indian corn, 24,805 of oats, 35,156 of potatoes, 27,567 pounds of sugar. It had 17 stores, 10 grist-mills, 13 saw-mills, three printing-offices, three weekly newspapers; 24 schools, 570 scholars. Pop. 4465. Capital, Defiance.

WILLIAMS, L., Northampton co., Pa. It has four stores, eight fulling-mills, one woolen factory, one grist-mill, three saw-mills; one school, 65 scholars. Pop. 1937.

WILLIAMSBERG, district, S. C. Situated toward the E. part of the state, and contains 1110 sq. m. Bounded S.W. by Santee river, N.E. by Lynches creek, and drained by its branches, by Black Mingo creek, and by Black river and its tributaries. It contained in 1840, 17,632 neat cattle, 3183 sheep, 29,035 swine; and produced 46,849 of potatoes, 200,312 of Indian corn, 5224 of oats, 60,949 of bushels of wheat, 95,500 pounds of rice, 515,038 of cotton. It had seven stores, nine flouring-mills, nine saw-mills; four academies, 70 students; 12 schools, 161 scholars. Pop.: whites, 3327; slaves, 6968; free coloured, 32; total, 10,327. Capital, Kingstree.

WILLIAMSBERG, p. t., Hampshire co., Mass., 8 m. N.W. Northampton, 100 m. W. Boston, 388 W. Mill river affords water-power. It contains three churches, two Congregational and a Methodist, four stores, two fulling-mills, two woolen factories, one furnace, one grist-mill, seven saw-mills; one academy; nine schools, 442 scholars. Pop. 1309.

WILLIAMSBERG, p. t., King's co., N. Y., 147 m. S. Albany, 227 W. Bounded W. by East river or strait, which separates it from the N.E. part of the city of New-York, with which it is connected by three steam-ferries. It contains seven churches, a Presbyterian, Dutch Reformed, Episcopal, two Methodist, and two Roman Catholic, 33 stores, capital \$95,000; two lumber-yards, capital \$37,000; 25 persons manufactured hats and caps to the amount of \$38,000, with a capital of \$15,000; four distilleries, employing 65 persons, produced 1,050,000 gallons of distilled spirits, with a capital of \$300,000; six rope-walks employed 123 persons, and produced cordage to the amount of \$203,000, with a capital of \$40,000; two printing-offices and two weekly newspapers employed eight persons, and a capital of \$3000. The total amount of capital employed in manufactures was \$343,000. There was one academy, 35 students; two schools, 107 scholars. Pop. 5094. The village is pleasantly situated at the W. end of Long Island, and contains most of the above churches, a village hall, including a jail, and has a considerable number of pleasant streets and handsome dwellings. It is closely allied to the city of New-York, where many of its inhabitants do business, and must grow with the growth of the city. It was incorporated in 1827, and its powers were enlarged in 1835.

WILLIAMSBERG, p. v., capital of James City co., Va., 58 m. E.S.E. Richmond, 175 W. Situated on elevated ground, between James and York rivers. It is the oldest incorporated town in Virginia, first settled in 1632, and in 1698 became the seat of the colonial government. It is regularly laid out, with streets intersecting each other at right angles, and contains a courthouse, jail, and county offices, and a public square; three churches, an Episcopal, Methodist, and Baptist, a lunatic asylum, a number of stores, various mechanic shops, 200 dwellings, some of which bear the marks of decay, and about 1600 inhabitants. It is the seat of William and Mary college, founded in 1693, has a president and three professors or other instructors, 98 students, and 5000 volumes in its libraries. The commencement is on July 4th. It is under the direction of the Episcopalians.

WILLIAMSBERG, p. t., Clermont co., O., 28 m. E. Cincinnati 1070

## WILLISTON.

nati, 105 m. S.W. Columbus, 472 W. Watered by the E. branch of Little Miami river. The village is 14 m. from Ohio river, and was formerly the capital of the county. The township has six stores, one grist-mill, five saw-mills; three schools, 85 scholars. Pop. 1450.

WILLIAMSON, county, Tenn. Situated near the centre of the state, and contains 476 sq. m. Drained by Harpeth river and its branches, flowing into Tennessee river. It contained in 1840, 23,417 neat cattle, 32,123 sheep, 96,910 swine; and produced 145,062 bushels of wheat, 22,071 of rye, 942,035 of Indian corn, 1225 of barley, 184,896 of oats, 30,320 of potatoes, 1,126,982 pounds of tobacco, 1,218,176 of cotton. It had 25 stores, one furnace, two forges, one cotton factory with 1052 spindles, 23 grist-mills, 11 saw-mills, nine tanneries, nine distilleries, one printing-office, one weekly newspaper; four academies, 143 students; 35 schools, 870 scholars. Pop.: whites, 15,641; slaves, 11,251; free coloured, 114; total, 27,006. Capital, Franklin.

WILLIAMSON, county, Ill. Situated in the S. part of the state, and contains 432 sq. m. Drained by branches of Muddy creek, which flows into Mississippi river, and of Saline creek, which flows into Ohio river. It contained in 1840, 4736 neat cattle, 3198 sheep, 13,902 swine; and produced 11,932 bushels of wheat, 172,890 of Indian corn, 29,370 of oats, 3681 of potatoes, 115,419 pounds of tobacco, 45,423 of cotton. It had seven stores, seven grist-mills, two saw-mills, two tanneries, two distilleries, two printing-offices, two weekly newspapers; 10 schools, 365 scholars. Pop. 4457. Capital, Bainbridge.

WILLIAMSON, p. t., Wayne co., N. Y., 200 m. W. by N. Albany, 364 W. Bounded N. by lake Ontario, into which its streams flow. It contains four churches, two Presbyterian, a Methodist, and a Baptist; four stores, one grist-mill, nine saw-mills, two tanneries; 11 schools, 375 scholars. Pop. 2147.

WILLIAMSPORT, p. b., cap. of Lycoming co., Pa., 160 m. N.W. Philadelphia, 93 m. N. Harrisburg, 203 W. Situated on the N. bank of the W. branch of Susquehanna river, and contains a courthouse of brick, having a yard enclosed with an iron railing, and planted with trees; a jail of stone; five churches, two Presbyterian, an Episcopal, a Methodist, and a German Reformed; a large academy of brick, 15 stores, three tanneries, two printing-offices, two weekly newspapers; two academies, 34 students; three schools, 150 scholars. It has a number of handsome dwellings and 1353 inhabitants. The Pennsylvania canal passes through the place. A railroad extends from this place 73½ m. to Elmira, New-York.

WILLIAMSPORT, p. v., Washington co., Md., 107 m. N.W. Annapolis, 80 W. Situated on the E. side of Potomac river, at the mouth of Conecogue creek, and contains about 500 inhabitants. The Chesapeake and Ohio canal passes through it.

WILLIAMSTOWN, p. t., Orange co., Vt., 11 m. S.E. Montpelier, 510 W. It occupies the height of land between lake Champlain and Connecticut river; a stream from the mountains naturally divides, a part flowing to White river, and a part to Onion or Winooski river. The Gulf road passes through a chasm in the mountains, and constitutes a remarkable passage through the Green mountain range. Chartered in 1781. It contains five churches, a Congregational, Methodist, Baptist, Free-will Baptist, and Universalist; two stores, one fulling-mill, one grist-mill, six saw-mills, two tanneries; 17 schools, 562 scholars. Pop. 1620.

WILLIAMSTOWN, p. t., Berkshire co., Mass., 20 m. N. Pittsfield, 131 m. W. by N. Boston, 393 W. Watered by Hoosic and Green rivers, which afford water-power. The village is situated on uneven ground, the main street passing over several ridges, and contains a Congregational church, several stores, an academy, the buildings of Williams college, and about 50 dwellings, some of them neat and handsome. The township contains also a Baptist church, and one common to Baptists and Congregationalists; seven stores, one fulling-mill, two cotton factories with 1788 spindles, two grist-mills, five saw-mills, two tanneries; one college, 130 students; one academy, 25 students; 13 schools, 340 scholars. Pop. 2153. Williams college, located here, was founded in 1793; has now (1844) a president and seven professors or other instructors, 967 alumni, 331 of whom have been ministers of the gospel, 144 students, and 7500 volumes in its libraries. The commencement is on the third Wednesday of August.

WILLINGTON, p. t., Tolland co., Ct., 28 m. W. Hartford, 264 W. Bounded W. by Willantic river, by branches of which it is drained, affording water-power. It contains iron ore, and has two churches, a Congregational and Baptist; three stores, two grist-mills, two saw-mills; 10 schools, 437 scholars. Pop. 1263.

WILLISTON, p. t., Chittenden co., Vt., 32 m. N.N.W. Montpelier, 518 W. Chartered in 1763. First settled in 1774 by Thomas Chittenden, one of the fathers of Vermont, and the first governor of the state, who died here in 1797.

## WILLOUGHBY.

It contains a handsome Congregational church of brick, 40 by 60 ft.; a town-house, 30 by 42 ft.; an academy, 26 by 36 ft., two stories high; four stores, six saw-mills, two tanneries; 10 schools, 359 scholars. Pop. 1554.

WILLSTON, t., Chester co., Pa., 20 m. N.W. Philadelphia. Drained by Ridley and Crum creeks. It has three stores, one flouring-mill, one grist-mill, four saw-mills; five schools, 206 scholars. Pop. 1460.

WILLOUGHBY, p. t., Lake co., O., 164 m. N.N.E. Columbus, 358 W. Watered by Chagrine river. It contains two churches, nine stores, one flouring-mill, two tanneries, and Willoughby university, the medical department of which only is in operation. It has five professors, 57 graduates, and 40 students. The lectures commence on the last Monday in October annually. It has been in contemplation to remove it to Cleveland. The township contains 13 schools, 800 scholars. Pop. 1943.

WILLSBOROUGH, p. t., Essex co., N. Y., 15 m. N.E. Elizabeth, 145 m. N. Albany, 516 W. Bounded E. by lake Champlain. Drained by Boquet river, flowing into the lake. It contains a Presbyterian church, four stores, one furnace, four forges, one fulling-mill, one grist-mill, eight saw-mills; 11 schools, 424 scholars. Pop. 1658.

WILLS, t., Guernsey co., O. Drained by branches of Wills creek. It contains the villages of Elizabethtown and Washington on the National road, and has one college, three schools, 125 scholars. Pop. 1916.

WILMINGTON, p. t., Windham co., Vt., 17 m. E. Bennington, 124 m. S. by W. Montpelier, 429 W. Branches of Deerfield river afford water-power. Chartered in 1763. It contains two churches, a Congregational and Baptist; four stores, one fulling-mill, two grist mills, eight saw-mills; 13 schools, 426 scholars. Pop. 1295.

WILMINGTON, city, port of entry, and semi-cap. of New-castle co., Del. Situated between Brandywine river and Christiana creek, 1 m. above their junction, and 2 m. from Delaware river, 47 m. N. Dover, 23 m. S.W. Philadelphia, 70 m. N.E. Baltimore, 110 W. It is in 39° 41' N. lat., and 75° 28' W. long. Pop. in 1830, 6628; in 1840, 8367. It is the largest place in the state, and is considerably engaged in foreign commerce and the whale fishery. Built on ground gradually rising to the height of 112 ft. above tidewater, and is regularly laid out with broad streets, crossing each other at right angles. The houses are generally built of brick, and some of them are elegant. It contains a city hall, two market-houses, three banks, an almshouse, an arsenal, a Friends' boarding-school for young ladies, a public library, and 16 churches, three Episcopal, three Presbyterian, three Methodist, two Friends', a Baptist, Roman Catholic, and some others. It has a daily communication with Baltimore and Philadelphia by railroad. Christiana creek is navigable to this place for vessels requiring 14 ft. of water. On Brandywine river are some of the finest flouring-mills in the United States, to which vessels can come requiring 8 ft. of water. It had in 1840, 95 stores, capital \$344,350; three lumber-yards, capital \$90,000; capital employed in the fisheries, \$170,000; machinery was produced to the amount of \$253,500; it had one cotton factory with 1140 spindles, six flouring-mills, one grist-mill, two tanneries, three breweries, two potteries, one rope-walk, three printing-offices, two binderies, three weekly and three semi-weekly newspapers, and one periodical; total capital employed in manufactures, \$459,000; nine academies, 437 students; 14 schools, 991 scholars. In the vicinity are many mills and manufactories besides the above. Tonnage of the port in 1842, 7063 tons.

WILMINGTON, p. v., port of entry, cap. of New-Hanover co., N. C., 90 m. S.E. Fayetteville, 148 m. S.S.E. Raleigh, 365 W. Situated on the E. side of Cape Fear river, just below the entrance of the N.E. branch, 35 m. from the ocean. It is the most populous town in the state, but the situation is unhealthy. It contains a courthouse, jail, two banks, an academy, two churches, a Presbyterian and Episcopal; numerous stores, about 600 dwellings, and 4744 inhabitants. The harbour admits vessels of 300 tons, but there is a dangerous shoal at its entrance. Opposite the town are two islands, dividing the river into three channels. The islands afford the finest rice fields in the state. The tonnage in 1840 was 10,193. In 1819, 200 buildings were destroyed by fire, at a loss of \$1,000,000.

WILMINGTON, p. v., Union t., cap. of Clinton co., O., 72 m. S.W. Columbus, 445 W. Situated on Todd's fork of Little Miami river. It contains a brick courthouse, 40 ft. square; a jail, four churches, a Methodist, Baptist, Presbyterian, and Friends'; 16 stores, numerous mechanic shops; a printing-office, issuing a weekly newspaper; 125 dwellings, and about 750 inhabitants. It was laid out in 1810.

WILMOT, p. t., Merrimac co., N. H., 27 m. N.W. Concord, 302 W. Drained by small tributaries of Blackwater river. It contains two churches, a Methodist and Free-will Baptist; one store, one fulling-mill, two saw mills; nine schools, 350 scholars. Pop. 1212.

## WILSON.

WILNA, or VILNA, a government of European Russia, comprising a large proportion of the ancient Lithuania and Samogitia; principally between the 54th and 56th degrees of N. lat., and the 21st and 27th of E. long.; having N. Courland, E. Minsk, S. Grodno, and S.W. Poland and Prussia. Area, estimated at 24,600 sq. m. Pop. in 1818, 1,513,800. It is a vast plain; there being only, in different parts, a few sandhills, reaching sometimes to the height of 200 ft., and abounding with fossil, shells, &c. Principal rivers, the Wilna, a tributary of the Niemen, and the Niemen, which forms its S.W. boundary. Lakes are numerous, particularly in the E. and N.E. The soil is partly sandy, and partly marshy; but in many places it consists of a fertile alluvial deposit. The climate, though severe, is not so cold as in some of the adjacent governments; the mean temp. of the year is about 45° Fahr. Agriculture is almost the sole occupation of the inhabs.; and rather more corn is grown than is required for home consumption. Rye is the grain principally cultivated. Hemp and flax are rarely grown; and hops and pulse are raised in gardens: fruits are neglected. The forests are very extensive, the crown possessing above 400,000 deciaitines of forest land; and there is a considerable trade in deals, timber, tar, potash, and other woodland products. Lime trees are very abundant; and to this cause is attributed the excellence of the honey, for which this government is famous.

The breeding of stock is neglected; the horses are, however, strong and active, though of small size. Game is very plentiful: elks, wild boars, bears, wolves, &c., are numerous; occasionally the urus is met with; and fox, martin, and squirrel skins are articles of trade. Mineral products unimportant. Manufactures have increased a little of late; but they are still quite inconsiderable. Dr. Granville says of Shavel, a town of 2000 inhabitants in this government. "It consists of a long street of low gable-roofed huts of wood plastered over, and presheating a general appearance of the most squalid misery. This may be considered as a fair specimen of the second-rate towns in the government of Wilna, and indeed all over Russia and Poland." (*Travels*, II. 516.) The trade, which, is almost entirely in the hands of the Jews, is principally in timber and agricultural produce, sent down the Dwina to Riga, or by land into Prussia. Wilna is divided into 11 districts; chief towns Wilna, the capital, and Kovno. It is not subject to the government monopoly of ardent spirits; and preserves several of its old forms of administration. As respects education it is, though far behind, in advance of many of the governments.

WILNA, a town of the Russian empire, cap. of the above gov., and formerly the cap. of Lithuania, at the confluence of the Wilenka and Wilna, 90 m. N.E. Grodno. Pop. in 1834, 35,697, of whom 20,000 were Jews, they being more numerous here than in any other town of Polish Russia. It is surrounded by undulating hills, and enclosed by a wall. Its streets are narrow and crooked, and its houses mostly of timber, though it has several hundred dwellings built of brick or stone. Formerly a royal castle of the Jagellons existed here, but nothing is left of it except its ruins. The cathedral, founded in 1387, has some good paintings, and many chapels, one of which, appropriated to St. Casimir, and built wholly of marble, is very handsome. The body of the saint is preserved here in a silver coffin, made by order of Sigismund III., and weighing, it is said, 30 cwt! The church of St. John is surrounded by the buildings of the university, founded in 1578, and suppressed in 1832. Here are in all about 40 churches, numerous convents, a mosque, and 4 synagogues, a magnificent town-hall, an arsenal, exchange, theatre, two hospitals, barracks, magazines, &c. The governor's palace and some residences of the nobility are fine buildings. Previously to its dissolution, the university of Wilna was in a flourishing state, and possessed an observatory, collections in mineralogy and anatomy, and a library of 52,000 volumes. A medico-chirurgical school, to which are attached the botanic garden and some of the university collections, an ecclesiastical seminary, and two gymnasia, are the principal public schools; most part of the university establishment has been removed to Kief. Wilna has deaf and dumb, and foundling asylums, various other charitable institutions, a few manufactures, and a considerable trade. It was founded in 1322, and is reported to have had, in the middle of the 16th century, 100,000 inhabitants, though this, no doubt, is a gross exaggeration. It has often suffered severely from fire. (*Schnitzler; Possart; Kaiserth, Russland.*)

WILNA, p. t., Jefferson co., N. Y., 157 m. N.W. Albany, 302 W. Drained by Indian f. Bounded S.W. by Black river, which here has the long falls, above which the river is navigable for steamboats, 40 miles to the high falls. It contains two commission houses in foreign trade, six retail stores, one furnace, one forge, two fulling-mills, one grist-mill, six saw-mills; 20 schools, 810 scholars. Pop. 2591.

WILSON, county, Tenn. Situated a little N. of the centre of the state and contains 625 sq. m. Bounded N. by

## WILTON.

Cumberland river, by small tributaries of which it is drained. It contained in 1840, 20,091 neat cattle, 19,399 sheep, 43,115 swine; and produced 106,413 bushels of wheat, 13,554 of rye, 2,601,652 of Indian corn, 164,334 of oats, 153,990 of potatoes, 2,313,000 pounds of tobacco, 295,373 of cotton. It had 19 stores, six woollen factories, two cotton factories, with 1556 spindles, 94 grist-mills, 47 saw-mills, 81 tanneries, 23 distilleries, one printing-office, one weekly newspaper; 36 schools, 887 scholars. Pop.: whites, 182,003; slaves, 5988; free coloured, 269; total, 24,460. Capital Lebanon.

WILTON, p. t., Niagara co., N. Y., 10 m. N.W. Lockport, 290 m. W. by N. Albany, 420 W. Drained by Howell's and Tuscarora creeks, flowing N. into lake Ontario, which bounds it on the N. It has one store, one grist-mill, three saw-mills; 12 schools, 476 scholars. Pop. 1753.

WILTON, a pari. and munic. bor. and pari. of England, co. Wilts, hund. Branch-and-Bole; on the Willy, a tributary stream of the Avon, 4 m. W. by N. Salisbury. The old borough comprised only the greater portion of the town; but the modern borough includes, besides the whole parish of Wilton, 11 adjacent parishes, and parts of five others, with an extra-parochial district; it has a total area of about 38,000 acres, and had, in 1831, a population of 8315.

It is a neat country town; the main street is partially paved and lighted, and is crossed by a smaller street nearly in its centre. The public buildings, the principal of which are the church and town-hall, are not remarkable, nor do either these or the private houses appear to be increasing. (*Bound. Rep. &c.*)

The church is in a mixed style of architecture; the living, a rectory annexed to the livings of Netherhampton, Ditchampton, and Bullbridge, worth £450 a year, is in the gift of the earl of Pembroke. It has, also, chapels for Independents, Wesleyans, an endowed free-school, established early in the 18th century, for the education and apprenticeship of 20 boys; a bequest of £1000, the interest of which is annually distributed in marriage portions to four young women belonging to the town, and several minor charities.

The hospital of St. John is the only one remaining of the numerous monastic establishments formerly existing here. The hospital itself is an old priory building, consisting of four distinct apartments under one roof, with a garden for the use of the inmates, who consist of two brethren and two sisters, presided over by a prior nominated by the dean of Salisbury cathedral. The rents reserved for the maintenance of the inmates amount to about £30 a year. (*Charity Commissioners' Rep.*)

Wilton had, for a lengthened period, a flourishing manufacture of woollen goods, especially of carpets, and it was here, indeed, that the first carpet made in England was manufactured. This business, however, gradually declined; and though it has somewhat revived of late years, it is still but inconsiderable.

The earliest existing charter of the borough dates from the 1st of Henry I., but from a very early period it has been governed by a mayor and an unlimited number of burgesses, including a recorder and five aldermen. This borough sent two members to the House of Commons from the 23d of Edward I. down to the passing of the Reform Act, which deprived it of one of its members. Previously to the last-mentioned act the franchise was vested "in the mayor and burgesses, who are to do all corporate acts and receive the sacrament." In point of fact, however, it was a nomination borough belonging to the earl of Pembroke. Registered electors, in 1839-40, 205. The only court that ever appears to have been held in the borough, except the court leet is a court of record, which has not been opened since 1781. There is a small prison, now used only as a lock-up house.

Wilton is very ancient. It had a famous abbey, originally founded in 773, and greatly improved and enlarged after the conquest. Wilton-house, the magnificent seat of the earls of Pembroke, occupies the site of this abbey: It is built in a fine park, watered by the Willy; its garden front was rebuilt from designs by Inigo Jones, and more recently it was enlarged and considerably altered by Wyatt, especially with a view to the better display of its superb collection of ancient statues and other works of art, paintings, &c. Wilton was most probably the birth-place of the dramatic poet Massinger; and archdeacon Cox, author of "Travels in Switzerland and the north of Europe," and of various valuable historical works, was, for a lengthened period, rector of Bemerton, in its immediate vicinity. The town has no market, but four annual fairs, that on the 12th of September being one of the largest sheep fairs in the W. of England. (*Bound. and Munic. Reps.; Beauties of Wiltshire, &c.*)

WILTON, p. t., Franklin co., Me., 38 m. W.N.W. Augusta, 475 W. Incorporated in 1803. Drained by branches of Sandy river, issuing from two ponds. It has seven stores, three fulling-mills, one woollen factory, one furnace, three grist mills, four saw-mills, three tanneries; 14 schools, 725 scholars. Pop. 2198.

## WILTSHIRE.

WILTON, p. t., Hillsborough co., N. H., 40 m. S. by W. Concord, 454 W. Drained by Souhegan river and its branches. It contains three churches, a Congregational, Baptist and a Universalist, two stores, two fulling-mills, five grist-mills, five saw-mills, two tanneries; nine schools, 269 scholars. Pop. 1033.

WILTON, p. t., Fairfield co., Ct., 74 m. S. W. Hartford, 275 W. Incorporated in 1802. Drained by Norwalk river, which affords water-power. It contains two churches, a Congregational and an Episcopal, seven stores, two grist-mills, two saw-mills; two academics, 63 students; 11 schools, 631 scholars. Pop. 2053.

WILTON, p. t., Saratoga co., N. Y., 12 m. N. by E. Ballston Spa, 43 m. N. Albany, 413 W. Drained by a tributary of Hudson r. It contains a Baptist church, two stores, one fulling-mill, one grist-mill, six saw-mills, two tanneries; seven schools, 239 scholars. Pop. 1438.

WILTSHIRE, an inland co. of England, in the S. part of the kingdom, having N. the co. of Gloucester, E. Berks and Hants, S. the latter and Dorset, and W. Somerset and Gloucester. Area, 874,880 acres, of which about 800,000 are arable, meadow, and pasture. It is divided by the rivers Kennet and Avon, and the canal by which they are united, into two grand divisions, popularly termed, from their situation, North and South Wiltshire. The latter consists, in great part, of Salisbury plain, extending from Westbury and Warminster, on the W., across the county to Hampshire, and from Lavington on the N., to near the city of Salisbury on the S. It consists principally of chalky downs, intermixed however with some fertile, well watered, and beautiful valleys. Though called a plain, the surface, as in all chalk land, is undulating; the most level part lies round Stonehenge. There is a good deal of rich land in the S. division, between Trowbridge and Pewsey, and between the Willy and the Dorsetshire border, E. to Wilton and Salisbury. Marlborough Downs, which bear in most respects a close resemblance to Salisbury plain, lie in the N. division of the county, between Marlborough and Swindon; but, with this exception, this division consists principally of rich vale land considerably exceeding in extent and importance the cultivated grounds of the S. division. There are some large estates; but property is, notwithstanding, a good deal subdivided. Farms of all sizes; and generally let on lease for 7, 14, and 21 years, with unobjectionable conditions as to entry. Farmhouses, in the S. division, were formerly built together for the convenience of water, but the more modern ones are generally detached. Agriculture in Wiltshire is in an advanced state, and reflects great credit on the skill and enterprise of the farmers. The land under the plough is remarkably clean and in good order. It is believed, however, that tillage on the down lands has been too much extended. When once broken up, it is extremely difficult to get them again into good condition as pasture; while, unless corn fetches a pretty high price, they are most productive in the latter. Principal corn crops, wheat and barley; the latter being, however, confined, in a great measure, to the light chalky soils. Turnips, rape or cole seed, and potatoes, largely cultivated. Much of the rich land in the N. division is appropriated to the dairy husbandry and the fattening of cattle. The cheese, which, excepting inferior butter made from the whey, is the only product of the dairies, was formerly sold as Gloucestershire cheese; but is now well known and much valued in London and elsewhere by its own proper name of North Wiltshire cheese. Breed of cattle various; they are partly slaughtered in Bath, Salisbury, &c., but the greater number are sold to the London butchers. In despite, however, of the encroachments made by the plough on the downs, sheep continue to be regarded, in the greater part of the county, as the principal support of the farmer. They afford the chief article of manure used on the land; while the sale of lambs and wool furnishes the principal means of paying the rent. In consequence, as it would seem of this dependence, and of the high price of wool during the last 10 or 12 years, there have been fewer complaints among the Wiltshire farmers than among those of most southern counties. The sheep stock, consisting partly of the native horned breed, but in a far greater degree of South Downs, and crosses between the two, is estimated at about 700,000; of which about 385,000 are depastured on the downs, and the rest on the cultivated land: the fleeces of the former are supposed to weigh at an average 2½ lbs., and those of the latter 4 lbs.; producing together about 8650 packs of wool. The irrigation of water meadows is to be seen in the greatest perfection in S. Wiltshire, and is practised on a large scale. Many hogs are kept; and Wiltshire bacon is highly esteemed.

In the vicinity of some of the towns of S. Wiltshire, a good deal of garden husbandry is carried on. Average rent of land, in 1810, 18s. 6½d. an acre. Stonehenge stands, in rude magnificence, in the middle of Salisbury plain. (*See Stonehenge.*) The manufactures of Wiltshire are considerable; they consist principally of various descriptions

## WIMBORNE MINSTER.

of superfine woollen goods, made at Bradford, Trowbridge, Westbury, &c.; thickets, and other sorts of cotton goods, are also prepared, though in small quantities. Wilton was long celebrated for a carpet manufactory, established by one of the earls of Pembroke; but this, though it has latterly increased, is not nearly so considerable as formerly. Speaking generally, manufactures of all sorts are here, as in other southern counties, on the decline. Principal rivers, Thames, Upper and Lower Avon, and Kennet. Exclusive of some local jurisdiction, Wilts contains 23 hundreds, and 300 parishes. It returns 18 members to the House of Commons, viz., four for the county; two for the city of Salisbury; two each for the boroughs of Chippenham, Cricklade, Devizes, and Marlborough; and one each for Calne, Malmesbury, Westbury, and Wilton. Registered electors for the county, in 1839-40, 8172, whereof 5259 were for the N., and 2913 for the S. division of the county. In 1841, Wilts had 50,986 inhabited houses, and 260,007 inhabitants, of whom 128,904 were males, 131,103 females. Sum paid for the relief of the poor in 1838-39, £129,525. Annual value of real property assessed to the poor in 1840-41, £1,175,616.

WIMBORNE MINSTER, a market town and par. of England, co. Dorset, hund. Bradbury; in a valley between the rivers Stour and Allen, each of which is here crossed by a bridge, 20 m. S.S.W. Salisbury. Area of par. 11,880 acres: pop. of ditto, in 1831, 4009. The town is pleasantly situated; but the streets, though clean, are irregular, and the houses have but little uniformity: it is well supplied with water, and has been considerably improved of late years. It is principally remarkable for its magnificent minster or church, which was formerly collegiate. The date of its original foundation is uncertain; but it has been usually referred to the 8th century, when a monastery was established here by a sister of Ina, king of the W. Saxons. Dr. Stukely, however, and some other antiquaries are of opinion, that the E. tower, and most part of the church, are posterior to, but soon after the conquest. It is a large cruciform structure, 180 ft. in length from E. to W., with two towers: one, a short, massive, Norman tower, rising from the middle of the roof, formerly surmounted by a lofty spire destroyed by lightning early in the 17th century: the other tower, in the perpendicular style, at the W. end of the building, has a fine window, which has, however, been closed up. The interior is divided after the manner of a cathedral; and till within the last few years the cathedral service was performed here. In the chancel are 16 stalls, with canopies of carved oak. It has some monuments of distinguished personages; but time, and the hand of violence appear to have destroyed a great many more. This edifice underwent extensive repairs and improvements from 1836 to 1840, at the joint expense of Mr. Banks, the earl of Devon, and the duke of Beaufort. (*Rickman's Gothic Architecture.*) The living is a rectory in the patronage of the earl of Shaftesbury. Here also are chapels for Independents, Wesleyans, and Baptists. The free grammar-school, originally founded in 1497, and re-established by Queen Elizabeth, has an income of about £100 a year. Its freedom is unlimited, but in 1836 there were only 25 pupils on the foundation. Another free-school, founded by the endowment of a private individual in 1665, has an income of £20 a year, and in 1836 was attended by 16 pupils. St. Margaret's almshouse, which is of very ancient foundation, has an income of about £120 a year, and the aggregate produce of the funds for charitable and religious uses in the parish amounted, at the period of the late inquiry by the charity commissioners, to nearly £1000 a year. The trade of Wimborne is limited to that arising from a small manufacture of woollen goods, and stocking-knitting. Petty sessions are held here for the Wimborne division of the hundred, and an annual court at Michelmas in a tything of the town, at which two bailiffs are appointed by 12 jurymen; but these have no authority over other parts of the town. Wimborne is supposed, from the various coins and antiquities found there, to have been a Roman station. Market day, Friday; fairs frequently, for cattle and cheese. (*Beauties of England and Wales*, art. Dorset, &c.)

WINCANTON, a market town and par. of England, co. Somerset, hund. Norton Ferris; on a declivity beside the small river Cale, here crossed by a stone bridge, 23 m. S. Bath. Area of par. 3860 acres. Pop. of do., 1831, 2123. Wincanton, having been destroyed by fire in 1747, has been since regularly laid out in four principal streets. The church, a spacious edifice, partially rebuilt in 1748, has a square embattled tower. The living, a perpetual curacy worth £123 a year, is in the gift of U. and G. Messier, Esqs. It has, also, a chapel for Independents, a new market-house, and several small charitable institutions. The manufacture of serges, bed ticking, and dowlas, though much fallen off, is still carried on, and the silk manufacture has been introduced on a small scale. Wincanton is an important mart for the cheese made in the surrounding country. The

## WINCHESTER.

town, divided into a borough and tything, is under the jurisdiction of separate officers; two constables for the former, and a tything-man for the latter, being chosen annually at the manorial court: besides which last, an annual court-leet is held here. Market day, Wednesday; fairs, twice a year. Wincanton is a place of remote antiquity, and is mentioned in *Domesday Book*.

WINCHCOMBE, a market town and par. of England, co. Gloucester, hund. Kilsgate, amidst the Cotswold hills, 6 m. N.E. of Cheltenham. Area of par., 5700 acres. Pop. of do., in 1831, 2514. The town consists mostly of three streets: the houses are in general of stone. The church, the erection of which commenced in the reign of Henry VI., is a noble Gothic structure, with a lofty square tower embattled and pinnacled; the nave is separated from the aisle by octagonal pillars and compressed arches, and from the chancel by a screen of carved oak. The living, a vicarage, worth £134 a year, is in the gift of — Tracy, Esqr. The free-school, founded in the 19th James I., has a yearly income of £49 4s., but has long declined from the condition of a grammar school; and at the last inquiry, it afforded only rudimentary instruction to 34 boys. An endowment of £20 a year supplies clothing to the poor. (*Charity Reps.*) The inhabitants are principally occupied in the manufacture of silk goods, paper, leather, cotton stockings, &c.: in 1838, one silk mill in the parish employed 76 hands. (*Mills and Factories' Rep.*) Winchcombe is of great antiquity, and before the time of Canute formed a county of itself, being then surrounded with walls, and having a famous abbey, founded during the Heptarchy, of which, as of its ancient castle, there are now few or no traces. The town was made a borough in the time of Edward the Confessor, but its charter has long been obsolete. About 1½ m. distant are the remains of Sudeley castle, now the property of the duke of Buckingham. (*Parliament. Reps. &c.*)

WINCHELSEA, a bor. cinque port, and market town of England, co. Sussex, E. div. hund. Staple, on the small river Bred, about 1½ m. from the English channel, 2 m. S. by W. Rye. Area of par. 1120 acres. Pop. in 1831, 772. Old Winchelsea, a town of importance under the Romans, situated on the coast at the mouth of the Rother, was destroyed by the encroachments of the sea, between 1250 and 1257. Before its destruction was completed, the inhabitants removed to New Winchelsea, as it was called, on a slight eminence about 2 m. S.W. from the ruined town. The new town, which was surrounded with walls by Edward I., covered a space of about 2 m. in circumference, had three churches, was regularly laid out, and enjoyed a considerable share of the trade with France, especially of that with Bordeaux. But, by a singular fatality, it was ruined by a course precisely the opposite of that which had destroyed the old borough. Instead of encroaching, the sea began in the 16th century to recede from this part of the coast, leaving, in the end, the town without a harbour, 1½ m. from the sea, and in part surrounded with a salt marsh! since this change was effected, it has progressively declined, and would most probably have been wholly deserted, but for the circumstance of its having enjoyed, from the 42d of Edward III. down to the passing of the Reform Act, by which it was disfranchised, the important privilege of sending two members to the House of Commons. It is now included in the borough of Rye. Of its three churches, only a portion of that of St. Thomas now remains. It has several old monuments, one of which is said by Rickman to be hardly exceeded by any in the kingdom for beauty of composition. The living, a rectory in private patronage, is worth £278 a year. The courthouse and jail underneath are of Saxon architecture. About a mile N.E. of the town are the ruins of Winchelsea castle, built in the reign of Henry VIII. An inconsiderable market is held on Saturday, and a fair on the 14th of May, for cattle and pedlery. (*Bound. and Mun. Reps.*)

WINCHENDON, p. L. Worcester co., Mass., 30 m. N. by W. Worcester, 60 W.N.W. Boston, 419 W. Drained by branches of Miller's river, which afford water-power. It contains three churches, a Congregational, Methodist, and Baptist, three stores, one cotton-factory with 3500 spindles, one grist-mill, seven saw-mills; 13 schools, 345 scholars. Pop. 1754.

WINCHESTER, a city, parl. and mun. bor. of England, co. Hants, of which it is the cap., hund. Baddlesgate, on the Itchin, here crossed by a modern stone bridge, 12 m. N. by E. Southampton, and 63 m. S.W. London; lat. 51° 3' 40" N., long. 1° 18' 26" W. The ancient parl. bor. was of very limited extent, and did not even include the whole city; but it is now wholly comprised in the modern parl. bor. (identical with the municipal bor.) with the adjacent hamlets of Winnal and St. Cross. Pop., in 1831, 9292.

The town, standing on the declivity of a hill gently rising from the river, is regularly laid out, clean, well paved, and lighted with gas. In its centre is the high street, a spacious

## WINCHESTER.

thoroughfare, running from E. to W., with parallel streets on either side, crossed by others of nearly an equal length. Most of the S.E. part of the town, but without the limits of the city-proper, is occupied by the cathedral and some other ecclesiastical edifices and their precincts. The houses are mostly substantial, and well built, many of them being in an antique style, and having a venerable appearance. It was formerly surrounded with walls; but these no longer exist; and of four ancient gates only the W. now remains.

Of the public edifices the cathedral is by far the most interesting, partly from its vast size and antiquity, partly from the variety of its architecture, and partly from its ancient importance. It was founded in 1079 by Bishop Walkelyn, a relative of William the Conqueror, who constructed the crypts, transepts, and tower; the work was continued under succeeding prelates, and was nearly completed by the famous William of Wykeham, between 1370 and 1400. It is of a cruciform shape, with a low tower rising from the centre; and, though rather heavy, has a grand and imposing appearance. Its extreme length, from E. to W. is 545 ft.; length of the nave from the W. porch to the iron doors at the entrance of the choir, 351 ft.; length of the choir, 136 ft.; breadth of the cathedral, 87 ft., and of the choir, 40 ft.; length of the transept, 186 ft.; height of the central tower, 150 ft. (*Miner*.) The character of the building was originally pure Norman, and the transepts and centre tower, built by Bishop Walkelyn, are admirable specimens of that style. The W. front, in the decorated Gothic, built by William of Wykeham, is singularly beautiful: it has a large and two smaller doorways, and a magnificent window with two slender lantern turrets. The Norman parts of the building are bold, simple, and well executed; the tower massive and finely ornamented. The groining is varied in different parts of the church, and that of the nave is remarkable for its intricacy and richness. In its smaller structures, screens, monumental chapels, and stall-work, this cathedral is very rich. The altar-piece is of late perpendicular; and over it is a painting, by West, of the resurrection of Lazarus." (*Rickman*, 174.)

The *coup-d'œil*, on entering the cathedral by the W. door, is grand and imposing; the vast size of the building; the loftiness and long line of its vaulted roof; the lancet pointed windows shedding on the different objects a "dim religious light;" the lines of clustered pillars and branching aisles; the numerous chantries and monuments of eminent men; and the silence that prevails within its walls; conspire to impress the mind with a deep sense of awe and sublimity. In the middle of the presbytery, between the choir and the altar, is a coffin tomb said to inclose the remains of William Rufus, killed while hunting in the New forest, and buried here in 1100. Several Saxon monarchs are also interred in this cathedral. Among the episcopal monuments, the most interesting are those of William of Wykeham and Waynflete, two of the most illustrious prelates of whom England has to boast. The first, who was bishop of this see from 1366 till his death in 1404, besides completing the cathedral, founded and endowed a college, or school, in the city, the scholars educated in which were afterwards to be sent to finish their university education in New college, in the university of Oxford, of which Wykeham was also the munificent founder. Waynflete, who was bishop of Winchester from 1447 to 1486, founded Magdalen college, Oxford, one of the wealthiest foundations in that university. Here also are monuments in honour of the celebrated Bishop Hoadley, and of old Isaac Walton, the prince of anglers.

The bishopric of Winchester has long been one of the most valuable in the kingdom, its nett revenue having amounted, at an average of three years ending with 1831, to £11,151 a year; but in pursuance of the recommendations of the commissioners of ecclesiastical inquiry, its revenue will be reduced on the decease of the present incumbent.

The diocese includes 384 pars., comprising, together with Hants, the greater part of Surrey and the Channel Islands. The cathedral establishment consists of a dean, 12 canons, and eight minor canons, who enjoy among them a gross annual income of about £12,000 a year. Winchester is said to have had at one time no fewer than 90 churches and chapels; but of these many were attached to monasteries and other religious establishments destroyed at the Reformation. There are still, however, as many as nine churches in the city and suburbs. Of these the small church of St. Lawrence, scarcely visible for the buildings by which it is surrounded, is supposed to be the mother church of the city, and the bishop takes possession of the diocese by making a solemn entry into it. St. Maurice, the principal parochial church, was pulled down in 1840, and an elegant and commodious structure has been erected on the site of the ancient edifice, which had become inconvenient and ruinous; the expense of its construction was defrayed by subscription. Among the other churches are St. Swithun's, built over a postern gate; St. Michael's, a handsome modern edifice in the pointed style, &c. The livings, except St. Bartholomew-

Hyde, a vicarage, and St. John's, a perpetual curacy, are all rectories, and are in the patronage either of the crown or the bishop of Winchester. But notwithstanding the number of its established churches, dissent is here pretty prevalent; and the Independents, Baptists, Wesleyans, and Rom. Catholics, have all places of worship. The chapel of the latter, a handsome edifice in the pointed style of architecture, was constructed in 1792.

The college, or school, founded, as already stated, by William of Wykeham, and completed in 1393, stands upon the site of a more ancient scholastic establishment. Its buildings enclose two large quadrangular courts, entered by spacious gateways; and besides apartments for the accommodation of the warden, scholars, &c., it has a noble hall and chapel. The whole structure is richly ornamented with pinnacles, buttresses, statues, &c. It is principally in the perpendicular style. Over the door of the school, a noble hall, constructed in 1687, at the expense of gentlemen educated in the college, is a fine bronze statue of the founder by Cibber, the sculptor, father of the hero of the "Dunciad." A building contiguous to the college is appropriated to the residence of the boys attending the school, but not on the foundation, where they are placed under the special inspection of the head-master. The building formerly used for this purpose being found to be inconvenient was pulled down, as well as the house of the head-master, in 1839, and a new and splendid edifice has been since erected in their stead, at an expense of about £25,000, defrayed by subscription.

This magnificent institution is the most ancient of the existing public schools of England, and formed the model for those of Eton, Westminster, &c. The establishment consists of a warden, a schoolmaster, and usher, 10 fellows, 3 chaplains, 3 clerks, 16 choristers, and 70 scholars; but there are in general about 200 boys in the school, including those not on the foundation. Boys on the foundation are provided with board and lodging within the walls of the college; the only payments to which they are subject, exclusive of travelling expenses, amounting to about £20 a year. Boys not on the foundation, lodge, as already stated, in an adjoining pile of buildings, under the superintendence of the head-master, and subject to college discipline. Scholars are sent, as vacancies occur, from this school to New college, Oxford. (*See Oxford*.) Among the distinguished individuals educated in this school may be specified Bishop Lowth, Sir Thomas Brown, Sir Henry Wotton, Otway, the tragedian, Young, author of "Night Thoughts," Collins, the two Wartons, &c.

Among the public buildings in the High street is St. John's house, an ancient structure, formerly the property of the knights templars, and a hospital. The great room in this building, 62 ft. in length and finely proportioned, was fitted up, in its present elegant style, by Geo. Bridges, Esq., a connection of the Chandos family, and a liberal benefactor of this city, of which he was long a parliamentary representative. It has a fine whole length portrait of Charles II., by Lely. In the rear of the building are neat edifices occupied by six poor widows, who, exclusive of their lodging, receive a weekly allowance of 10s. and other advantages. In 1833, an important addition was made to this charity, by the erection of a building, in the Elizabethan style of architecture, with a spacious quadrangle, intended to serve as an asylum for 12 aged females and six old men. Christ's hospital, founded in 1586, supports six old men, three boys, and a woman. An almshouse, founded by Bishop Morley in 1673, supports 10 clergymen's widows. Here, also, are charity schools for boys and girls, a national school for children of both sexes, and a mechanics' institute.

Among the public buildings may be specified the cross in the High street, a fine structure of the age of Henry VI. in the later pointed style, above 40 ft. in height. The guildhall, rebuilt in 1713, has in front a statue of queen Anne. The original Winchester bushel of king Edgar, and other ancient standards of length and capacity, formerly preserved in this building, have been removed to an apartment over the W. gate of the city. A bridewell and house of correction has been erected on the site of a magnificent monastery, in which the remains of the great Alfred are said to have been interred. On the N. side of the city is the county jail. The county hospital, in Parchment-street, is a fine structure, which has recently been considerably enlarged; a new corn exchange was erected in 1838. Beyond the W. gate is an obelisk, erected in 1759, to commemorate a dreadful visitation of the plague to which the city was subjected in 1669. The places of amusement include a theatre, assembly-rooms, &c.; races take place in July, about 4 m. from the city. It has also a public library and reading-rooms, and a savings bank.

Winchester has no manufactures, but a very considerable retail trade, and all the public business for the county is transacted within its limits. "It may be considered, without hesitation, as gradually increasing in houses, population,

## WINCHESTER.

and wealth. A large extent of the surrounding district belongs to ecclesiastical and other corporate bodies, which, not being empowered to grant long leases, give no encouragement to building; but wherever land held in fee-simple, or freehold land, can be procured, it was obvious, from our own inspection, that houses calculated for the habitations of the industrious classes were augmenting." (*Part. Bound. Rep.*) The assize courts for the county are held, and other public business transacted in what was once the chapel of the castle, built by the Conqueror. (See *post.*) At the E. end of the hall is 'suspended a large round wooden table, 18 ft. in diameter, popularly called "Arthur's Round Table," but which is, no doubt, of a much less remote antiquity. It was painted in the time of Henry VIII.

The circumstance of its being the capital of the county makes Winchester the residence of a great number of gentlemen connected with the law; and being also the residence of a number of superior clergymen, and of gentlemen attracted to the city by the beauty of the situation, and the facilities for education and amusement, the society is very superior. There are, indeed, but few places in England that seem so well fitted for the residence of people of slender fortune. Being within a very short distance of the Southampton railway, the access to London on the one hand, and to the S. coast on the other, is as easy and expeditious as can possibly be desired.

Winchester was first incorporated in the reign of Henry II. Under the Mun. Reform Act, it is divided into three wards, and is governed by a mayor, five other aldermen, and 18 councillors. It has a recorder, who holds courts, and a commission of the peace. Petty sessions are held twice a week, and also quarter-sessions. Corp. rev., in 1840, £2075. Winchester has sent two members to the House of Commons since the 23d of Edward I. Previously to the Reform Act, the right of election was vested in the members of the corporation, who had power to augment their number. Registered electors, in 1830-40, 618.

This is certainly one of the most ancient of the English towns. Under the Romans it was a place of considerable importance, and it subsequently became the capital of the West Saxons. William the Conqueror erected a castle here, under the pretence of protecting the city, which had suffered much from the incursions of the Danes; but really, perhaps, in the view of overawing the inhabitants. From this period, however, London became the capital of the kingdom, and Winchester gradually declined in importance. But its castle was repeatedly occupied by the Norman monarchs; Henry III., hence called Henry of Winchester, was born here in 1207, and various parliaments were held in the city in the 14th and 15th centuries. Here, also, in 1552, Henry VIII. entertained his illustrious guest, the emperor Charles V.; and here the marriage of Mary, daughter of Henry, with Philip II., eldest son of Charles, was solemnized July 25, 1554. In the reign of Charles II. it again became, though for a short period only, a royal residence. Charles, indeed, was so much attached to Winchester, that in 1663 he employed the famous architect, Sir Christopher Wren, to erect a new and magnificent palace on the site of the old castle. The death of the king put a stop to the progress of the building, before it was finished; and, after various mutations, it is now used as barracks.

About 1 m. S. from the city is the ancient hospital of St. Cross, founded in 1132 by Henry of Blois, bishop of Winchester, the brother to king Stephen. The present establishment, which approaches nearer to a monastery than any other in England, consists of a master, a chaplain, a steward, and 12 resident brethren. The buildings once composed two courts; but they have been partly pulled down. The chapel, in the interior court, is built in the cathedral form, with a nave and transepts, and a low, massive tower at their intersection, and affords a fine specimen of the transition of the Norman into the early English style of architecture. The entrance gateway has a handsome tower, with a statue of the founder, Cardinal Beaufort.

No traces now remain of the monastery previously referred to as containing the remains of the great Alfred, rebuilt in the reign of Henry II. the revenues of which amounted at the dissolution to £865 a year. Neither are there any remains of a university founded in the reign of Alfred, and other similar establishments.

About 4 m. E. by N. from Winchester is Avington, a fine seat belonging to the duke of Buckingham. (*Parl. Reports; Camden's Britannia*, Gibson's ed., i. 138, &c.; *Guide to the City of Winchester; and Private Information.*)

WINCHESTER, p. t., Cheshire co., N. H., 64 m. S.W. Concord, 418 W. Drained by Ashuelot river and its branches, which afford water-power. It contains three churches, a Congregational, Methodist, and Universalist; six stores, three fulling-mills, three woollen factories, one cotton factory with 400 spindles, one furnace, four grist-mills, 15 saw-mills, one oil-mill, two tanneries; 14 schools, 570 scholars. Pop. 2065.

## WINDHAM.

WINCHESTER, p. t., Litchfield co., Ct., 26 m. N.W. Hartford, 350 W. Watered by Mad river, a branch of Farmington river. It contains four churches, two Congregational, a Methodist, and a Universalist; eight stores, three fulling-mills, two woollen factories, one furnace, nine forges, one grist-mill, five saw-mills, three tanneries; one academy, 100 students; 13 schools, 420 scholars. Pop. 1667.

WINCHESTER, p. v., capital of Frederick co., Va., 146 m. N.N.W. Richmond, 74 W. Founded in 1752. The streets cross each other at right angles, and are generally paved, and the houses are mostly built of brick or stone. It contains a courthouse, jail, a market-house, a lyceum, and 13 churches, two Presbyterian, an Episcopal, two Methodist, three Baptist, two Lutheran, a German Reformed, Friends, and Roman Catholic; an academy, two banks, besides a bank for savings, numerous stores, two furnaces, one carpet factory, one cotton factory, three carriage factories, seven flouring-mills, two breweries, two printing-offices, two weekly newspapers, and 3454 inhabitants. It is supplied with water brought from a spring, half a mile distant, through cast iron pipes. A railroad extends to Harper's Ferry, 32 miles, where it connects with the Baltimore and Ohio railroad. It is well situated for trade, and has great advantages for intercourse. The remains of old Fort London, famous in the French war, are here seen; and the inhabitants afforded important aid to the youthful Washington, after the defeat of Braddock, and in the final capture of Fort Duquesne.

WINCHESTER, p. v., capital of Scott co., Ill., 15 m. S.W. Jacksonville, 50 m. W.S.W. Springfield, 830 W. It has a courthouse, jail, three churches, a Congregational, Methodist, and Baptist; 11 stores, one flouring mill, one grist-mill, one saw-mill, two tanneries, one pottery; one academy, 60 students; two schools, 69 scholars. Pop. 720.

WINDHAM, county, Vt., situated in the S.E. part of the state, and contains 780 sq. m. Bounded E. by Connecticut river. Drained by Williams, West, and Saxton's rivers. It contained in 1840, 42,661 neat cattle, 114,336 sheep, 29,435 swine; and produced 23,796 bushels of wheat, 33,502 of rye, 139,923 of Indian corn, 13,387 of buckwheat, 8129 of barley, 178,761 of oats, 743,366 of potatoes, 423,400 pounds of sugar. It had 80 stores, two furnaces, 19 fulling mills, eight woollen factories, one cotton factory with 60 spindles, 49 grist-mills, 134 saw-mills, one oil-mill, seven paper-mills, 29 tanneries, four printing-offices, three weekly newspapers, and one periodical; four academies, 501 students; 243 schools, 9138 scholars. Pop. 27,442. Capital, Fayetteville village, in Newfane township.

WINDHAM, county, Ct., situated in the N.E. part of the state, and contains 620 sq. m. Organized in 1726. Drained by Quinebaug and Shetucket rivers, and their branches. The Norwich and Worcester railroad passes through it, from S. to N. It contained in 1840, 23,597 neat cattle, 39,504 sheep, 12,562 swine; and produced 8999 bushels of wheat, 48,278 of rye, 173,003 of Indian corn, 30,653 of buckwheat, 5904 of barley, 179,027 of oats, 497,991 of potatoes, 3001 pounds of silk cocoons, 2549 of sugar. It had 115 stores, one furnace, eight fulling-mills, 15 woollen factories, 54 cotton factories with 105,016 spindles, 57 grist-mills, 109 saw-mills, 50 oil-mills, three paper-mills, 19 tanneries, one distillery; eight academies, 317 students; 166 schools, 7749 scholars. Pop. 25,080. Capital, Brooklyn.

WINDHAM, p. t., Cumberland co., Me., 14 m. N.N.W. Portland, 56 m. S.S.E. Augusta, 553 W. Bounded N.W. by Sebago pond, S.W. by Presumpscot river. Incorporated in 1762. It has five stores, 18 schools, 620 scholars. Pop. 2303.

WINDHAM, p. t., Windham co., Ct., 31 m. E. Hartford, 358 W. It was formerly the capital of the county, which was removed to Brooklyn, as more central, in 1820. Chartered in 1692, first settled in 1666. Watered by Shetucket river. The village near the centre contains two churches, a Congregational and Episcopal, a bank, an academy, six stores, and about 60 dwellings. It has not increased since the American revolution. Willimantic village is a flourishing manufacturing place, 3 m. from the principal village, and in the N.W. part of the township, on Willimantic river; one of the constituents of Shetucket river. It is built chiefly on one street, and contains three churches, a Congregational, Methodist, and Baptist, and the principal manufacturing factories of the township. In the E. part is the parish of Scotland, with a Congregational church, and a small v. There are in the township 11 stores, two fulling-mills, three woollen factories, five cotton factories with 11,950 spindles, three grist-mills, seven saw-mills, two paper-mills; 18 schools, 925 scholars. Pop. 3382.

WINDHAM, p. t., Greene co., N. Y., 18 m. W. Catskill, 45 S.W. Albany, 363 W. Watered by Bataviakill creek. It has 16 stores, three grist-mills, 17 saw-mills, five tanneries; 10 schools, 203 scholars. Pop. 2417.

WINDHAM, t., Luzerne co., Pa., 25 m. N.W. Wilkesbarre, Drained by Big and Little Mahopeny creeks. It has two

## WINDSOR.

stores, one fulling-mill, two flouring-mills, one saw-mill; nine schools, 394 scholars. Pop. 1647.

WINDHAM, p. t., Portage co., O., 159 m. N.E. Columbus, 315 W. Called Sharon until 1820. First settled in 1811, by 14 emigrants from Berkshire co., Mass., who purchased the township, and organized a church before their departure. It has much of the industrious and steady habits of New-England, and is a fine farming township. It has one academy, 76 students; eight schools, 217 scholars. Pop. 907.

WINDSOR, a town, parl. and mun. bor., par. and royal residence of England, co. Berks, hund. Ripplesmere on the Thames, 20 m. W. by S. London. Previously to the Reform Act, the parl. bor. was nearly co-extensive with the par.; the modern parl. and mun. bor. comprises about half the par., with the lower ward of the castle, and a small portion of the adjacent par. of Clewer; having an area of about 4500 acres, with, in 1831, a pop. of 7071.\* The town, partly situated on low ground, along the river, and partly on the declivity of the ridge occupied by the castle, the W. end of which is surrounded by its buildings, consists of six principal and several smaller streets, and is well paved, and lighted with gas. It communicates with Eton, on the opposite bank of the Thames, by a handsome iron bridge of three arches, raised on granite piers. Of late years, many buildings of a superior kind have been erected in the W. part of the town, in that portion of Clewer par. included in the modern parl. bor. The par. church is a handsome new Gothic structure: the living, a vicarage worth £400 a year, is in the gift of the crown. The guildhall, a neat edifice supported on columns and arches of Portland stone, occupies a conspicuous site in the High-street. On its N. side is a statue of Queen Anne, and on its S. one of Prince George of Denmark: in the interior are numerous portraits of royal and other distinguished persons. The cavalry and infantry barracks, the new royal stables, a neat theatre built in 1815, and several dissenting chapels, are among the other principal buildings. The charity school, founded in 1705, had at the date of the late enquiry an income of £167 a year, and was attended by 55 children; it has, also, a ladies' charity school for girls, national and Sunday schools, &c. George III. established a hospital for invalid soldiers in 1784; a lying-in charity was founded in 1801, and the royal general dispensary in 1818, and there are numerous minor charities having an aggregate income of about £800 a year. Windsor was first chartered in 1276, by Edward I., in the 30th of whose reign it began to send members to the House of Commons, though returns have been regularly made only since the 25th Henry VI. The right of voting was formerly in householders paying scot and lot, who had resided for six months within the bor. Under the Boundary Act the alterations previously alluded to were made in the limits of the bor. Reg. electors, in 1839-40, 667. Under the Mun. Reform Act the bor. is divided into two wards, and is governed by a mayor, five other aldermen, and 18 councillors. It has a commission of the peace, and a court for the recovery of debts under 40s. Corp. revenue, in 1840, £1653. Windsor has no manufacture of importance; and being out of any principal line of road, its trade is merely one of retail, being confined to the supply of goods to the inhabitants and visitors. It has numerous inns and lodging houses, though, considering the resort of company to the town, the former are certainly of a very inferior description to what might have been expected. The ale of Windsor enjoys a considerable reputation, and is sent to London and other places. The town supports two weekly newspapers, Markets, Wednesday and Saturday, the latter principally for corn. Fairs, Easter Tuesday, July 5 and October 4, for horses, cattle, sheep, and wool. (*Bound. and Munic. Corp. Rep.; Priv. Inf., &c.*)

WINDSOR, county, Vt. Situated toward the S.E. part of the state, and contains 900 sq. m. Bounded E. by Connecticut river. Watered by White, Quechee, Black and Williams rivers. Soap-stone is found in Plymouth, Bridgewater, and Bethel, and extensively wrought and exported. Limestone is abundant. It had, in 1840, 51,863 neat cattle, 234,826 sheep, 22,834 swine; and produced 56,659 bushels of wheat, 46,126 of rye, 168,897 of Indian corn, 49,380 of buckwheat, 5164 of barley, 301,026 of oats, 1,073,753 of potatoes, 1146 pounds of silk cocoons, 2100 of hops, 462,444 of sugar. It had 100 stores, four furnaces, 57 fulling-mills, 27 woolen factories, one cotton factory, with 650 spindles, 46 grist-mills, 154 saw-mills, two paper-mills, one oil-mill, one rope-walk, 43 tanneries, four printing-offices, two binderies, five weekly newspapers, and two periodicals; one college, 70 stu

\* Eton and Windsor being so closely connected as to form in effect one town, it is not easy to see any good ground for excluding the former from the parl. bor. This exclusion will appear the more remarkable, when it is borne in mind that the limits of the parl. bor. were made to embrace the lower ward of the castle, occupied by the prior Knights of Windsor, the Dean and Canons of St. George's Chapel, and other dependents on the court. Had the object been to create an independent constituency Eton would have been included in the parl. bor., and every part of the castle excluded.

## WINDSOR CASTLE.

dents; seven academies, 558 students; 257 schools, 13,054 scholars. Pop. 40,356. Capital, Woodstock.

WINDSOR, p. t., Kennebec co., Me., 10 m. E. Augusta, 605 W. Drained by Sheepscot river, and by several ponds which discharge their waters into it. Chartered in 1809 by the name of Malta. It has two stores, one fulling-mill, one grist-mill, seven saw-mills; 15 schools, 758 scholars. Pop. 1789.

WINDSOR, p. t., Windsor co., Vt., 65 m. S.S.E. Montpelier, 471 W. Bounded E. by Connecticut river. Mill brook affords good water-power, having a fall of 60 ft. in one third of a mile. The t. contains six churches, two Congregational, a Methodist, Episcopal, Baptist, and one common to Freewill Baptists and Universalists, nine stores, three fulling-mills, two woolen factories, one furnace, five grist-mills, eight saw-mills, three tanneries, one printing-office, two weekly newspapers, and two periodicals; 18 schools, 848 scholars. Pop. 2744. The village is one of the pleasantest in this part of the state, situated on the W. bank of Connecticut river, one fourth of a mile distant, with a beautiful meadow in front. The main street has several turns at very obtuse angles, and is well built, having some elegant dwellings, finely ornamented with trees and shrubbery. It contains a courthouse for the United States circuit and district courts, three churches, the Vermont state prison, nine stores, various mechanic shops and mills and manufactories, a printing-office, 125 dwellings, and about 875 inhabitants. Acutney mountain, on the S. line of the t. is an isolated peak, 3320 ft. above tidewater, and 3116 ft. above Connecticut river at Windsor. It is often ascended, and presents an extensive and beautiful prospect from its summit. It forms an interesting object as seen from the v.

WINDSOR, p. t., Hartford co. Ct., seven m. N. Hartford, 343 W. It is one of the oldest towns in Connecticut, having been settled in 1636. Bounded E. by Connecticut river. Watered by Farmington or Tuxis river. It contains three churches, two Congregational and a Methodist, six stores, one fulling-mill, one woolen factory, three cotton factories with 570 spindles, five grist-mills, two saw-mills, three paper-mills; one academy, 39 students, nine schools, 287 scholars. Pop. 2283. The principal village is built on a single street, from 2 to 3 m. long, a little back from the river, and contains a Congregational church, several stores, and many elegant houses, beautifully shaded with trees, and ornamented with shrubbery. There are two other villages in the t.

WINDSOR, p. t., Broome co., N. Y., 12 m. S.E. Binghamton, 126 m. S.W. Albany, 300 W. Watered by Susquehanna river and its tributaries. It contains two churches, a Presbyterian and Methodist, three stores, one fulling-mill, three grist-mills, 11 saw-mills, two tanneries; 20 schools, 685 scholars. Pop. 2368.

WINDSOR, t., Berks co., Pa. Bounded W. by Schuylkill river, E. by Maiden creek. It contains two churches, one of them common to Lutherans and Presbyterians, one store, one grist-mill, one oil-mill, two tanneries, six distilleries. Pop. 2882.

WINDSOR, p. v., capital of Bertie co., N. C. 157 m. E. by N. Raleigh, 260 W. Situated on the W. side of Cashie river, a branch of Roanoke river. The river is navigable to this place for vessels of from 80 to 100 tons. The country around is fertile, and the place is well situated for trade, but the location is unhealthy.

WINDSOR CASTLE is the principal country seat of the sovereigns of England, and one of the most magnificent royal residences in Europe. It appears to have been founded by William I. soon after the conquest, and it has been enlarged or embellished by the greater number of his successors, particularly by Edward III., George III., and George IV. Under the latter it was, indeed, in great part rebuilt, and throughout renovated by Sir Jeffrey Wyatville, and has been fitted up in the most splendid style. Being placed on the summit of a lofty eminence rising abruptly on the S. side of the river, it commands very extensive views, and is, at the same time, a most conspicuous and interesting object from all the surrounding country. It is of an oblong form, and is divided into an upper, a middle, and a lower ward, the entire area comprised within its outer wall being about 12 acres.

The upper or E. ward consists of a quadrangle, having on the N. the state apartments shown to the public; on the S. the apartments appropriated to the use of visitors; and on the E. the private apartments of the sovereign: on the W. the upper ward communicates, by the Norman and Saint George's gateways, with the middle ward, a narrow inclosure round the base of the round tower, which crowns the summit of an artificial mound in the centre of the castle. The lower ward, which is considerably smaller than the upper, has on its S. and W. sides the houses of the military knights, and the Salisbury, Garter, and Bell towers; and on the N. St. George's chapel, and Wolsey's tombhouse, behind which are other buildings inclosing several smaller

## WINDSOR CASTLE.

quadrangles: it is entered from the town of Windsor at the S.W. corner by Henry VIII.'s gateway. On the N. side of the castle, outside the state apartments and middle ward, is the North terrace, originally constructed by Queen Elizabeth, and afterward enlarged and improved by Charles II. This noble walk, resting partly on precipitous ledges of rock, and partly on masonry, rises about 70 ft. over the meadows at its base, and is at once the finest terrace of its kind in the kingdom, and a distinguishing feature of the castle. On the E. side of the castle, opposite her majesty's private apartments, are the sunk or royal gardens, comprising about two acres.

The principal and most magnificent entrance to the castle is on the S., by the gateway of George IV., between the York and Lancaster towers. The York tower, on the right hand, formed part of the ancient edifice; but the Lancaster tower is wholly new, its foundation having been laid on the 12th of August, 1824. The towers are symmetrical, being about 100 ft. in height, with machicolated battlements. Immediately opposite to this gateway is the principal entrance to the state apartments. The grand staircase, with the guard-room at its top, is, perhaps, among the happiest efforts of Wyattville's genius. The staircase is lighted by an octagonal lantern 100 ft. above the pavement, and has a marble statue of George IV. by Chantrey. In the vestibule is the collection of paintings by West, representing the exploits of Edward III.; and in the guard chamber are the coats of mail worn by John king of France, and David king of Scotland, while prisoners in the castle, with busts of Marlborough, Wellington, and Nelson, the latter on a pedestal formed of a portion of one of the masts of the Victory.

The decorations of the king's drawing-room are very superb: the ceiling is painted in compartments, representing the restoration of Charles II., the labours of Hercules, and other subjects; and on each side the room are numerous paintings by Rubens, and the arms of several of the English kings. The ceiling of the audience-chamber has an allegorical representation of the church of England; and in the same apartment are West's Installation of the Knights of the Garter, and several portraits. The ballroom, 96 ft. in length, 32 ft. in width, 31 ft. in height, is finished in the gorgeous style of Louis XIV. It is hung in part with Gobelin tapestry, representing the story of Jason and the Golden Fleece, said to have belonged to the unfortunate Marie Antoinette. St. George's hall, the banqueting room of the knights of the garter, is 200 ft. in length, with an arched ceiling divided into compartments and panels, in which are nearly 700 shields, emblazoned with the arms of the knights down to the present time. At the E. end is the throne, under a rich canopy; and on the S. side of the hall are the portraits of the different sovereigns, from James I. to George IV., by Vandyck, Lely, Kneller, Lawrence, &c. The Waterloo chamber, 100 ft. in length by 46 in width, has portraits, principally painted by Sir Thomas Lawrence, of most of the sovereigns, warriors, and statesmen who took a prominent part in the contest with France terminated by the battle of Waterloo. The other state apartments do not require any particular notice; they have the inconvenience of all entering from each other, so that to get to the last in the range all the others must be gone through.

The entrance to her majesty's private apartments is at the S.E. corner of the upper ward, through a handsome hall, from which a double staircase leads to a magnificent corridor 500 ft. in length. The private apartments consist of a dining-room, 50 ft. in length by 37 in width; a drawing-room, 66 ft. in length by 30 in width; a smaller drawing-room, 40 ft. in length by 25 in width; library, 50 ft. in length by 40 in width; with bedrooms, dressing rooms, boudoirs, &c. These rooms are, as might be expected, most sumptuously furnished. The apartments for servants occupy the lower and higher stories of the palace.

The round tower was originally built by the celebrated William of Wykeham, the architect employed by Edward III. It stands on an artificial mound, and is approached by a covered flight of 100 steps. From a court in the interior, another flight of steps leads to the battlements, whence, in a clear day, portions may be seen of no fewer than 12 counties. This tower, which has been much modernized, is 32 ft. higher than formerly, and is surmounted by a turret 20 ft. in height, whence the royal standard is displayed: it is the residence of the governor of the castle. At the base of the tower is a bronze equestrian statue of Charles II., erected by one of his pages.

The great object of interest in the lower ward is St. George's chapel. "This is one of the finest perpendicular buildings in the kingdom: it is regular in its plan, and nearly all in one style. It is a cross church, with the transepts ending in octagonal projections which have two heights of windows. At each end of the aisles are also small octagonal projections sideways; all these are separated by screens, and form monumental chapels. In the E. wall of

the chapel is a doorway of early English date; and perhaps other portions of a date prior to the present chapel may remain; but the whole of the chapel is a specimen of the perpendicular style in its advanced, but not latest period. The roof of the nave is painted with armorial bearings, and the whole highly enriched, so that it now presents one of the best examples of the capability of English architecture for the reception of splendid colouring and gilding. (*Rickman's Gothic Architecture*, 124.)

The interior is divided by the screen and organ gallery into two parts, the body of the chapel and the choir. The W. end of the former is wholly occupied by an enormous window, fitted with painted glass, which, however, is deficient in brilliancy and richness of colouring. The fittings of the choir are mostly modern. St. George's chapel was built between 1474 and 1516, chiefly under the direction of Beauchamp, bishop of Salisbury, and Sir Reginald Bray, minister of Henry VII. It has served as the burial place of Henry VI. (removed hither by Richard III. from Chertsey), Edward IV. and his queen, Henry VIII. and Jane Seymour, and Charles I. It has a few old monuments, including that of Edward IV., of hammered steel. Here also is a monument in honour of the late Princess Charlotte, but it is generally admitted to be in bad taste, stiff, and unnatural. Adjoining the chapel on the E. is Wolsey's tomb-house, built by Henry VII., but which afterward came into possession of the cardinal. James II. fitted it up as a Roman Catholic chapel. It remained unoccupied from this era down to that of George III., by whom it was repaired, and a vault beneath it fitted up as a mausoleum for the royal family; and in it are now deposited the bodies of George III. and his queen, George IV., William IV., the dukes of York and Kent, the Princess Charlotte, the Princess Augusta, &c.

But, despite its magnificence, we confess that Windsor castle appears to us to be extremely deficient in many things that one should expect to meet with in an ancient and favourite seat of the kings of England. Except the associations connected with the building, and the names of some of its towers and apartments, it has but little to connect it with the nation, or to make it an object of interest. In its interior, everything has been sacrificed to gratify the taste of George IV. for ostentation and vulgar finery. Not a single apartment has been allowed to continue in its ancient state, to carry us back to the days of the Edwards, the Henrys, Elizabeth, or even the Stuarts. Everything that was venerable for its antiquity, or interesting from its history or associations, has been demolished or changed; so that one might suppose it had been wholly constructed within the last 20 years. Nor is there anything in the fittings-up and embellishments of the apartments to atone for the destruction or metamorphosis of all that was old and interesting in the building. It has nothing to mark it out as the chosen seat of the constitutional sovereign of the British empire. Excepting the busts of Marlborough, Wellington, and Nelson, there is hardly, in the state apartments, any memorial of any one of the many great men whose exertions have contributed to increase the power and glory of the British nation. We look in vain for either busts or portraits of Shakspeare, Bacon, Milton, Newton, Locke, Dryden, and Pope. Much as the English nation owes to Watt and Arkwright, Windsor castle has no monument of either the one or the other. And the same may be said of most of our great parliamentary leaders, and even of the men who brought about the Revolution, and placed the Hanoverian family on the throne. The library is wretchedly deficient in books connected with the history and state of the country and its colonies; and, vast as is the building, it has neither a theatre nor an opera-house. One, in fact, might suppose that it had been fitted up for the residence of some opulent upholsterer; and, except in its fine situation, size, and external appearance, it has but little appropriate to or worthy of its destination.

The Little park is a fine expanse of lawn, comprising nearly 500 acres round the E. and N. sides of the castle. In it is the tree usually supposed to be identical with the Heme's oak of Shakspeare. Windsor great park comprises about 3800 acres on the S. side of the castle, being well wooded, and exhibiting a great variety of ground. Here is the long walk, a noble avenue, nearly 3 m. in length, extending in a straight line from the grand entrance to the castle to the top of a hill, on which a colossal bronze equestrian statue of George III., by Westmacott, has been erected. On the S. side of the hill is Virginia water, an artificial lake, with a fishing temple in the Chinese style. Windsor forest, the theme of Pope's fine poem, is a tract 56 m. in circumference, laid out by William the Conqueror for the purposes of hunting, and kept up by the succeeding sovereigns. Latterly, however, it has been mostly enclosed. Its limits embrace one market town, Wokingham, and numerous villages. Old Windsor, where the Saxa monarchs are said to have had a residence, is on the Thames, about

## WINFIELD.

1 m. S.E. Windsor. (For accounts of the castle, the reader may consult *Jesse's Windsor and Eton*, and the different guide-books.)

WINFIELD, p. t., Herkimer co., N. Y., 76 m. W. Albany, 375 W. Drained by branches of Unadilla river. It contains three churches, a Presbyterian, Baptist, and one other; five stores, one fulling-mill, one woolen factory, one furnace, three grist-mills, 11 saw-mills, one tannery, one distillery; 11 schools, 490 scholars. Pop. 1652.

WINNEBAGO lake, Wis. ter., 24 m. long and 10 broad. It receives Fox river in its W. part, and discharges it from its N. part, whence it flows into Green bay, lake Michigan.

WINNEBAGO, county, Wis. ter. Situated in the N. part of the settled portion of the territory, and contains 500 sq. m. Watered by Neenah creek, Fox river, and Panway-gun lake, through which passes a considerable river. Bounded E. by Winnebago lake. It contained in 1840, 184 neat cattle, 147 swine; and produced 1690 bushels of Indian corn, 1980 of potatoes, 4400 pounds of sugar. It had one grist-mill, one saw-mill. Pop. 135. Capital, Oshkosh.

WINNEBAGO, county, Ill. Situated in the N. part of the state, and contains 504 sq. m. Watered by Rock river and its tributary, Pekatonokee river. Formed in 1836. It contained in 1840, 4711 neat cattle, 894 sheep, 12,374 swine; and produced 63,315 bushels of wheat, 127,377 of Indian corn, 1399 of buckwheat, 50,117 of oats, 79,136 of potatoes, 115,419 pounds of tobacco, 13,823 of sugar. It had 18 stores, one fulling mill, one flouring-mill, one grist-mill, 10 saw-mills, two distilleries, 23 potteries, two printing-offices, two weekly newspapers; 26 schools, 606 scholars. Pop. 4609. Capital, Rockford.

WINNIPESOGEE, lake and river, N. H. Situated between Belknap and Carroll counties, and is 22 m. long and from 1 to 10 broad. The waters are remarkably pure, it being fed extensively by springs at its bottom, and it is very deep. In picturesque beauty, and fine surrounding mountain scenery it may vie with the lakes of Scotland or Switzerland. Its outlet, proceeding from Great bay on the S.W., and through two small lakes, forms Winnipisogee river, which, uniting with Pemigewasset river, forms Merrimac river. Winnipisogee river, in its short course, has a fall of 232 ft., affording a great water-power. The lake is 472 ft. above tide-water. It has a large number of islands, said to be not less than 365, and some of them are sufficiently extensive for farms, one of them containing 500 acres.

WINNSBOROUGH, p. v., cap. of Fairfield dist., S. C., 29 m. N.N.W. Columbia, 150 m. N.N.W. Charleston, 480 W. Situated on the dividing ridge between Wateree and Broad rivers. It contains a handsome courthouse, a jail, market-house, a male and a female academy; four churches, two Presbyterian, an Episcopal, and a Methodist; 12 stores, 100 dwellings, some of them handsome, and about 700 inhabitants. It is celebrated for the manufacture of cotton gins. In the vicinity is "the Furnace institution," a literary and theological seminary, under the direction of the Baptists, the object of which is to educate young men for the ministry.

WINSLOW, p. t., Kennebec co., Me., 20 m. N. by E. Augusta, 615 W. Bounded W. by Kennebec river. Watered by Sebasticook river and its tributaries, one of them issuing from a pond near its centre. It has two stores, one fulling-mill, four saw-mills; 14 schools, 733 scholars. Pop. 1722.

WINSTON, county, Miss. Situated a little N.E. of the centre of the state, and contains 720 sq. m. Drained by branches of Pearl and Tombigbee rivers. It contained in 1840, 8729 neat cattle, 1224 sheep, 12,898 swine; and produced 8843 bushels of wheat, 209,165 of Indian corn, 8495 of oats, 22,971 of potatoes, 4005 pounds of rice, 2475 of tobacco, 1,108,607 of cotton. It had three stores, nine grist-mills, five saw-mills, two tanneries; one academy, 18 students; one school, 29 scholars. Pop.: whites, 3061; slaves, 1580; total, 4650. Capital, Louisville.

WINTHROP, p. t., Kennebec co., Me., 10 m. W. Augusta, 598 W. It has a large pond or small lake in its E. part, 10 m. long, and from 1 to 3 broad; and two others, one of which extends N. into Readfield. Cobbescontee river flows through these ponds to Kennebec river. There is a village at the union of the N. lake, the outlet of which affords water-power. There is another village at the N. end of the large lake or pond. The township contains five stores, one fulling-mill, one grist-mill, three saw-mills, two tanneries, one printing-office, one weekly newspaper; five schools, 691 scholars. Pop. 1915.

WINTON, p. v., cap. of Hertford co., N. C., 35 m. N.W. Edenton, 155 m. N.E. by E. Raleigh, 227 W. Situated on the S.W. side of Chowan river, 2 m. below the junction of Nottaway and Meherrin rivers, which form it. It contains a courthouse, jail, and about 100 inhabitants.

WIRKSWORTH, a market town and par. of England, hund. of same name, co. Derby, at the S. extremity of the lead mining district, 12 m. N.N.W. Derby. Area of parish,

## WIRTEMBERG.

14,640 acres. Pop. of ditto in 1831, 7754; of the town, 3787. The latter, in a valley nearly encircled by hills, consists principally of two streets formed by the intersection of two turnpike roads at right angles. The church of St. Mary, a spacious edifice in a mixed style of architecture, consists of a nave and side aisles, a N. and a S. transept, a chancel, and a square tower supported on four massive pillars. The living, a vicarage worth £164 a year, is in the gift of the dean of Lincoln. There are chapels for Baptists, Independents, and Wesleyans. A free grammar school, founded and endowed in 1570 by Anthony Gell; Esq., for an unlimited number of scholars, has an income of above £200 a year. There are several almshouses, and the funds for general charities yield an income of above £130 a year. The moot and sessions hall, erected in 1773, is a handsome sione building, with shambles underneath. The lead mines in the vicinity, though now comparatively neglected, still furnish employment for a considerable number of the inhabitants. In 1833, there were three cotton-mills at work in the parish, employing 612 hands. The other branches of industry consist of silk weaving, wool combing, and the making of hats, tapes, and hosiery. The Cromford canal passes about 1½ m. to the N. of the town, crossing the Derwent by an aqueduct of one arch 80 ft. in span; and the High Peak railway has also its terminus a little to the N. of Wirksworth. The town is under the jurisdiction of a constable and headborough. Petty sessions for the hundred are held weekly, and four minor courts every year in the moot hall, in which all business relating to the mines is decided. The manor of Wirksworth forms a part of the duchy of Lancaster. It was acquired by Sir Richard Arkwright, the great founder of the cotton manufacture, who died at his house at Cromford in this parish, in 1792, and is now held by his son, Richard Arkwright, Esq. Market day, Tuesday; fairs four times a year for horned cattle. (*Beauties of England and Wales*, art. Derby; *Report on Mills and Factories*; *Charity Reports*, &c.)

WIRT, L. Alleghany co., N. Y., 15 m. S. Angelica, 270 m. W.S.W. Albany. Drained by Little Genesee creek. It has one grist-mill, seven saw-mills; one school, 36 scholars. Pop. 1207.

WIRTEMBERG (Germ. *Wurtemberg*), KINGDOM OF, one of the secondary states of the German confederation, in the S. part of which it is situated, between lat. 47° 5' and 49° 35' N., and long. 8° 15' and 10° 30' E., having N., W., and S.W. the territory of Baden; E. and S.E., Bavaria; and S., the lake of Constance, and the Hohenzollern principalities, which last it nearly encloses. Its area, population, subdivisions, &c., are given as follows in the *Alma nach de Gotha* for 1842:

Circles.	Area in English sq. m.	Pop. in 1838.	Pop. to sq. m.	Chief Towns.
Neckar	1,306	456,143	351	Stuttgart
Black Forest	1,861	448,187	238	Reutlingen
Danube	2,549	390,090	149	Ulm
Jaxt	2,124	365,419	173	Eilwangen
Total	7,840	1,619,839	216	

*Physical Geography, &c.*—The surface is in great part mountainous, being covered by ranges of the Black forest (*Schwarzwald*), Svanian, and Raube mountains. The Oberhohenberg, near Dellingen, rises to about 3278, and the Kniebis to 3100 ft. above the sea; but, in general, the various ranges are less than 3000 ft. in height. Wirtemberg belongs partly to the basin of the Danube, and partly to that of the Rhine; besides which the principal rivers are the Neckar, with its tributaries, and the Iller, a tributary of the Danube. Except that of Constance, it has no lake of any importance.

The climate is mild in the sheltered valleys; at Stuttgart the mean temperature of the year is about 51° Fahr. The quantity of rain that falls varies, in different places, from 20 to 46 inches a year; but at Stuttgart is about 23.9 inches. As respects its productions, the country may be divided into three zones: the region of the vine, which extends to about 1000 ft. above the sea; that of fruit and corn, to 2000 ft.; and that of corn and forests, comprising all above the latter elevation.

*Agriculture* is the principal occupation of the mass of the population. The arable lands have been estimated to comprise about 2,440,000 morgen; vineyards, 84,778 ditto, gardens and orchards, 150,650 ditto; pasture lands, 738,000 ditto; and forests nearly 2,000,000 ditto. Spelt, oats, barley, rye, and wheat, are the grains principally cultivated; and a larger quantity of corn is usually produced than is required for home consumption: in 1834, a surplus of 140,000 *scheffels* was exported. Potatoes are raised in large quantities; and Berghaus has estimated the annual crop at 3,000,000 *scheffels*. Peas, beans, turnips, hops, and tobacco, are only partially cultivated. The wines grown on the Neckar are tolerably good; and altogether Wirtemberg produces annually about 155,000 cimers of wine, of the es-

## WIRTEMBERG.

estimated value of 3,100,000 florins; but a great deal of this is grown at a considerable elevation on the banks of the lake of Constance, and elsewhere, and is of a thin and indifferent quality. Apples, pears, apricots, and other fruits of temperate climates, including even figs and melons, come to perfection, and small quantities of cider and perry are made. The forests are an important source of wealth. Pine, fir, and cedar are the principal kinds of trees, but oaks, beeches, &c., are also numerous. The timber cut in the Black forest is estimated to produce upwards of 400,000 florins a year. According to Berghaus, there are upwards of 800,000 head of cattle, 93,000 horses, 586,000 sheep, and 122,000 hogs in the kingdom; and the value of the wool produced annually may be about 1,713,000 florins. (*Allg. Länder, &c.*, iv., 254.) There are numerous associations for improving the different branches of rural industry; and government spends considerable sums in the encouragement of agriculture.

Salt is one of the principal mineral products, and between 400,000 and 500,000 centners a year are obtained from salt springs; of which quantity, about 230,000 centners are consumed in the country, the rest being exported, principally to Switzerland. Coal and lignite are found, but in no great quantities; iron ore, slate, building and mill stone, alabaster, gypsum, nitre, and potters' clay are, however, more or less abundant; and in the Black forest are several mineral springs frequented by visitors.

Manufactures of linen and linsey-wolsey fabrics, hosiery, and woollen cloths are carried on in most of the peasants' houses; and in some places to such an extent that in the little village of Laichingen, there are 400 hand-looms, which annually produce 400,000 ells of linen. The manufacture of wooden clocks, toys, &c., exported to all parts of Europe and America, is extensively carried on in the Black forest and other parts. Cotton yarn is spun, and cotton cloth woven by machinery, in Stuttgart and Obendorf; and woollen yarn, stockings, leather, paper, glass, and tobacco, and tobacco-pipes are manufactured in the principal towns; and there are also a good many dyeing-houses, glue factories, breweries, distilleries, &c. The principal exports consist, however, of cattle, wool, corn, timber, fruit, wine, seeds, hemp, iron, salt, pitch, tar, oil, and other raw products, which are sent down the Neckar, Rhine, and Danube. The total value of the exports and imports may be respectively estimated at from 15,000,000 to 18,000,000 florins a year. Wirttemberg, at one period, proposed with Bavaria to join Austria in a commercial union, for the S. of Germany, in opposition to that established by Prussia in the N.; but the proposal being rejected, Wirttemberg, like Bavaria and Baden, is now a member of the Prussian commercial league.

Accounts are kept in gulden or florins, worth about 1s. 8d., divided into 15 *batzen*, or 60 *kreuzers* of 6 *hellers* each. The ell, about 2 ft. English; the *morgen*—nearly two thirds of an acre; the *scheffel*—7538 cubic inches.

The Government is an hereditary monarchy, limited by the constitution of 1819. The parliament consists of two chambers, called together every three years, or oftener, if necessary. The first chamber is composed of the subordinate members of the royal family, the mediatized princes, and the heads of the principal noble families; the second chamber, or house of representatives, consists of 94 members, including 13 of the inferior nobility, six Protestant superintendents, the Roman Catholic bishop, and other dignitaries, the university-chancellor, deputies from the towns of Stuttgart, Tübingen, Ludwigsburg, Ellwangen, Ulm, Heilbronn, and Reutlingen; and a representative from each rural district, chosen every six years. Members of the second chamber must be 30 years of age. The administration is conducted by five ministers of state, who, with a president, form the privy council. The supreme judicial court in Stuttgart is divided into civil, criminal, educational, and matrimonial tribunals; and in each of the circles, districts, and communes there are courts of justice. The reigning house, which had been previously Protestant, became Roman Catholic in 1772, without, however, the change having any material influence over the religious persuasion of the people. Of the population in 1838, 1,124,929 were Lutherans; 418,290 Roman Catholics; and 11,266 Jews. In respect of education, Wirttemberg ranks very high. In 1830 it was estimated that one in seven of the population was receiving public instruction; and, according to Berghaus, every individual in the kingdom is able to read and write, except a few in that part of the country called the Suabian terrace, where the Neckar rises. It has a university (at Tübingen), a lyceum, and gymnasia, in all the principal towns, with ecclesiastical, citizens', and other schools; and a primary school in every village. The total armed force consists of 19,500 men, including eight regiments of infantry, four of cavalry, and three companies of artillery, with train, &c. The public revenue, at an average of the four years ending with 1841, amounted to

## WISBEACH.

9,667,835 Rhenish florins a year; the public debt in 1839 was 24,024,179 florins.

Mr. Loudon, who travelled over most part of Wirttemberg, in 1828, says, "From what I have seen of this country (Wirttemberg) I am inclined to regard it as one of the most highly civilized in Europe. I am convinced that the great object of government is more perfectly attained here, than even in Great Britain: because, with an almost equal degree of individual liberty, there are incomparably fewer crimes, as well as far less poverty and misery. Every individual in Wirttemberg reads and thinks, and to satisfy oneself that such is the case, he has only to enter into conversation with the first peasant he meets; and to observe the number and style of the journals that are everywhere circulated; and the multitude of libraries in the towns and villages. I did not meet with a single beggar in Wirttemberg, and with only one or two in Bavaria and Baden. The dress of the inhabitants of Wirttemberg, as well as those of a great part of Bavaria and Baden, appeared to me to indicate a greater degree of comfort than I had ever observed in any other country, with the exception, perhaps, of Sweden and the Lowlands of Scotland." (*Loudon's Letter to Count Lasteyrie.*)

History.—Wirttemberg derives its name from a castle near Stuttgart, the principal seat of the reigning family. It was formerly a dukedom. The French overran the country in 1796; but the sovereign having made his peace with the conquerors, important additions were made to his territories in 1800; and soon after the battle of Austerlitz, Napoleon raised the duke to the rank of king. Under the congress of Vienna, Wirttemberg holds the sixth rank in the German confederation, with four votes in the full diet and one in committee; and contributes 13,955 men to the confederated army. (*Berghaus; Allg. Länder, &c.; Stein's Handb. der Geog.; Dict. Géog.; Menninger; Besch. von Württemberg.*)

WISBEACH, a mun. bor., market town, river-port, and par. of England, co. Cambridge, hund. Wisbeach, in the isle of Ely, close to the border of Norfolk, on the Nene, here crossed by a fine stone bridge of one arch, 11 m. S. from the mouth of the Nene, in the Wash, and 33 m. N. Cambridge. The old borough of very irregular shape, was co-extensive with the parish of St. Peter's; the modern borough is much more compact, and of less extent, but comprises a suburb of Wisbeach called New-Walsoken, on the E. side of the river, excluded from the old borough, and has an area of about 1200 acres, with a population, in 1831, of 8100. The central and main portion of the town lies in an angle between the Nene and Wisbeach canal: other streets extend for some distance N. and S. along both banks of the river, and along the canal, by which the town communicates with the Ouse in a S.E. direction. Most part of the houses on the E. side of the canal belong to the parish of Walsoken, in the county of Norfolk: this suburb has been built within the last thirty years, and appears to be still extending. The inhabitants consist chiefly of the labouring classes employed in or connected with the interests of Wisbeach. (*Mun. Corp. and Bound. Reps.*) The town is irregularly laid out, but has, of late, been much improved: in its centre is a handsome crescent, erected in 1816 on ground formerly occupied by a castle founded soon after the conquest. Most parts of the thoroughfares are well paved and lighted with gas. The parish church of St. Peter is a spacious but singular edifice, having two naves and two aisles. It exhibits a mixture of the Norman, decorated, and perpendicular styles. It has a fine tower, and has within several monuments of distinguished families, but is at the same time much encumbered with modern galleries. The living, a vicarage, to which the curacy of St. Mary's is attached, is one of the most valuable in this part of the country, being worth £1779 a year: it is in the gift of the bishop of Ely. A chapel-of-ease has an endowment yielding £200 a year; and the Baptists, Friends, Unitarians, Independents, and Wesleyans have their respective places of worship. The other principal buildings include a town-hall and custom-house, comprised in one building erected in 1804; a corn-exchange, assembly-rooms, and a theatre. Here, also, are some good libraries, and literary and other societies. The free grammar school, of ancient foundation, affords instruction to 20 boys, and has two exhibitions of about £70 a year to Magdalen college, Cambridge. Among the other educational establishments, are two charity schools, partly supported by voluntary contributions, but chiefly by bequests; one for boys having an income of above £250 a year, and one for girls, of above £220 a year. There are 18 well-endowed almshouses, and the funds in the hands of the corporation for the support of schools, almshouses, apprenticing of children, loans, and the general relief of the poor, are said by the commissioners of charity inquiry to have amounted to above £1130 a year.

Wisbeach has no staple manufacture; but it has an iron

# WISBY.

foundry, seven yards for building and repairing vessels and boats, rope-walks, an extensive brewery, and several large mauling establishments. The trade of the town is considerable, from its being the emporium of a considerable tract of country. The exports principally consist of corn, wool, rape-seed, and other products of the fens; and the imports of coal, timber, groceries, &c.

The trade of the port has been largely benefited by the great improvements that have been made, under acts passed in 1827 and 1829, in the course of the Nene from Wisbeach to its outfall in the Wash. These consisted principally in deepening and straightening the bed of the river, and in the drainage and embankment of the adjacent fens. This important work cost about £200,000, of which £30,000 was contributed by the corporation of Wisbeach, who were at the same time authorized to levy increased port dues (now 3d. per ton) on vessels frequenting the port. The latter may now be reached by a comparatively safe and speedy navigation, at spring tides, by vessels of 120 tons burden, and, at other times, by vessels of 60 tons. There belonged to the port, in 1841, 56 vessels of 50 tons and upwards, having an aggregate burden of 5200 tons. The gross customs duty collected at this port, in 1840, amounted to £5591. The increase in the amount of shipping belonging to the port, which has nearly doubled since 1835 when the Nene Outfall was finished, and of the customs duties, shows the substantial advantages it has derived from that improvement.

The town is apparently prosperous; its trade is extending, the value of property in the neighbourhood has increased, local taxation is stationary, and labour well paid. The inhabitants are said to be characterized by industry and prudence. Education among them is general, and few serious crimes are committed. (*Appendix to Munic. Corp. Report.*)

Wisbeach received its first charter of incorporation from Edw. VI., others being granted to it by James I. and Charles II. Under the Municipal Reform Act, it is divided into two wards, and governed by six aldermen and 18 councillors. The corporation revenue, which principally arises from harbour dues, exceeds £2000 a year. Wisbeach has a commission of the peace, petty sessions, and a court of record for the recovery of small debts; and assizes are held here annually. The ancient castle of Wisbeach was long the episcopal palace of the bishops of Ely, but no traces of it now exist. A cattle market was established here in 1810. Wisbeach has frequently suffered from inundations. Market-day, Saturday. Fairs five times yearly, chiefly for cattle, horses, hemp, and flax. (*Parl. Reps., art. BEDFORD LEVEL, in this work, and Private Information.*)

WISBY, a town of the island of Gotland, which see.

WISCASSET, p. t., port of entry, and one of the capitals of Lincoln co., Me., 27 m. S.S.E. Augusta, 588 W. It has a spacious harbour at the mouth of Sheepscot river, which enters an arm of the ocean. It is open and safe, has a depth of water sufficient for the largest vessels and is not often obstructed by ice. It has considerable shipping, employed in the foreign and coasting trade and the fisheries. Ship building is a considerable business. During the prosperous days of American commerce, previously to 1807, it advanced rapidly in wealth; but it received a check from the non-intercourse and war, from which it is gradually recovering. Its harbour is one of the finest in the state, but its back country is limited. The village is beautifully located on rising ground, overlooking the harbour, and contains a courthouse, several churches, many stores, and some large and handsome dwellings. In the town, chiefly in the village, are five commercial houses in foreign trade, with a capital of \$103,600; 21 retail stores, capital \$27,800; one furnace produced 25 tons of cast iron; bricks and lime were produced to the amount of \$2000; two tanneries produced 75 sides of sole leather and 340 sides of upper leather; two manufactories of leather, as saddlery, &c., produced to the amount of \$700; one pottery produced \$300; carriages and wagons were produced to the amount of \$550; two grist-mills and four saw-mills produced articles to the amount of \$35,500, with a capital of \$46,500; vessels were built to the amount of \$25,500; furniture was manufactured by 20 persons, with a capital of \$21,200. Total capital employed in manufactures, \$71,150. There were eight schools, 983 scholars. Pop., in 1830, 3255; in 1840, 3214. Tonnage of the port in 1842, was 12,989 tons.

WISCONSIN, territory, is bounded N. by the British possessions; N.E. by Montreal and Menomonee rivers, and a line connecting their sources, separating it from Michigan; E. by lake Michigan, separating it from Michigan proper; S. by Illinois; and W. by Mississippi river, and a line due N. from its source, to the British possessions, separating it from Iowa territory. It is between 42° 30' and 49° N. lat. and between 87° and 95° 54' W. long. It is 600 m. long and 150 broad, containing about 30,000 sq. m., or 57,600,000 acres.

# WISCONSIN.

It contained in 1840, 30,945 inhabitants. Of these 24,57 were white males; 11,952 were white females; 101 were coloured males; 84 were coloured females. Employed in agriculture, 7047; in commerce, 479; in manufactures and trades, 1814; in mining, 479; in navigating lakes, rivers, canals, &c., 223; in the learned professions, 259.

It is divided into 22 counties, which, with their population in 1840, were as follows:

Counties.	Total Pop.	Counties.	Total Pop.
Brown . . .	2,107	Milwaukee . .	5,605
Calumet . . .	275	Portage . . .	1,623
Crawford . .	1,502	Racine . . .	3,475
Dane . . .	3,114	Rock . . .	1,701
Dodge . . .	67	St. Croix . . .	801
Fond du Lac .	139	Sauk . . .	102
Grant . . .	3,925	Sheboygan . .	133
Green . . .	835	Walworth . . .	2,611
Iowa . . .	3,574	Washington . .	343
Jefferson . .	814	Winnebago . .	135
Manitowoc . .	235	Total . . .	30,945
Marquette . .	18		

Madison, between the third and fourth lakes, of the chain of the Four lakes, in Dane county, is the capital. The U. States' government have appropriated \$40,000 for the erection of the public buildings, and \$5000 for the public library.

The surveyed part of the territory, south of Green bay, Fox and Wisconsin rivers, is composed of timbered land and prairie, with some swamps or wet prairies, having generally a soil from one foot to several feet deep. The crops generally raised in the same latitude may be cultivated with success. They are wheat, rye, Indian corn, buckwheat, barley, oats and potatoes. The abundant pasturage on the prairies render it peculiarly favourable to the raising of cattle. North of the Wisconsin river, the country becomes hilly, and thence northward it swells into a rugged and broken country, producing rapids and water-falls in the streams, and affording much wild and picturesque scenery. Near the sources of the Mississippi is an elevated table land, abounding with lakes and swamps, covered with wild rice, and affording abundance of fish. Bordering on the Mississippi and Wisconsin rivers, the soil is rich, and the surface is generally covered with a heavy growth of timber. White pine is found on the upper Mississippi. About Rock river, and thence to Mississippi river, there is much excellent land, but generally a deficiency of timber. This territory has not been long settled, and its productions do not at present show what the country is capable of producing.

There were in the territory in 1840, 5735 horses and mules; 30,369 neat cattle; 3462 sheep; 51,363 swine; poultry was raised to the value of \$16,167. There were produced 212,116 bushels of wheat, 1965 of rye, 379,359 of Indian corn; 10,654 of buckwheat; 11,069 of barley; 406,514 of oats; 419,608 of potatoes; 6777 pounds of wool; 1474 of wax; 135,288 of sugar. The products of the dairy were valued at \$35,677.

The southern part of Wisconsin is an exceedingly rich mineral region, which extends into Illinois and Iowa. Lead ore, yielding 75 per cent of metal, is abundant. This has been, for a considerable time, extensively wrought. Copper ore is also extensively found, and is beginning to be wrought. Iron ore also exists.

Mississippi river washes its western border. (See Mississippi river.) The Wisconsin, a large tributary of Mississippi river, is 500 m. long; Chippewa river is a large stream, and enters the Mississippi further to the N.W. Rock river, another tributary, runs partly in this territory, but principally in Illinois. Neenah or Fox river, which passes so near the Wisconsin that in time of high water the country between them is often overflowed, and can be passed in boats, flows through lake Winnebago, and enters Green bay. Though obstructed by rapids, boats at times pass up it for 180 m. In future time, it may be an important medium of communication between lake Michigan and Mississippi river.

There are many lakes and ponds, particularly in its northern parts. The four lakes, between two of which Madison, the capital is situated, are strung along a stream called Catfish river, which enters Rock river, 25 or 30 m. above the boundary of Illinois, and are beautiful sheets of water. Winnebago lake is 24 m. long and ten broad, and has its outlet, by Fox river, into Green bay. This bay is a branch of lake Michigan which bounds the territory on the E. furnishing facilities for commerce.

The most important place in the territory is Milwaukee, on lake Michigan. It has had a rapid growth, is extensively visited by steamboats from Buffalo and different ports on lake Erie, and is an important commercial centre. It has the only good harbour between Chicago and Green Bay. Green Bay is near the mouth of Neenah or Fox river, at the head of Green bay, and has a good harbour, and an extensive trade. Racine and Sheboygan on lake Michigan,

## WISSEMBOURG.

and Prairie du Chien on the Mississippi river, just above the mouth of Wisconsin river, are important stations, and growing places.

There were in this territory in 1840, one commercial and seven commission houses in foreign trade, with a capital of \$63,000; 173 retail dry goods and other stores, with a capital of \$661,550; 133 persons employed in the lumber trade, with a capital of \$21,180; 62 persons engaged in internal transportation, who, with three butchers, packers, &c., employed a capital of \$14,100; the capital employed in the fisheries was \$61,300; the amount of lumber produced, was \$302,293; of skins and furs, \$124,776.

No great extent of manufactures can be expected in this recently settled territory. Home-made or family manufactures amounted to \$12,567. There was one furnace, employing a capital of \$4000; 49 smelting houses produced 15,129,350 pounds of lead, employing 220 persons, and a capital of \$664,600; one person manufactured 12 small arms; five persons manufactured various metals to the amount of \$3500; 43 persons made bricks and lime to the amount of \$6327; one tannery produced 150 sides of sole leather, and 150 sides of upper leather, employing three persons, and a capital of \$3000; 13 other manufacturers of leather, as saddleries, &c., employed 13 persons, producing articles to the amount of \$11,800, with a capital of \$7002; five persons produced 64,317 pounds of soap, 12,909 pounds of tallow candles, and 48 pounds of wax or spermaceti candles, with a capital of \$3432; three distilleries produced 3300 gallons of distilled spirits, and three breweries, 14,200 gallons of beer, the whole employing 11 persons, and a capital of \$14,400; eight persons produced carriages and wagons to the amount of \$2600, with a capital of \$325; four flouring-mills produced 900 barrels of flour, and with 29 grist-mills and 124 saw-mills, employed 850 persons, producing articles to the amount of \$350,993, with a capital of \$561,650; vessels were built to the amount of \$7159; 29 persons manufactured furniture to the amount of \$6045, with a capital of \$5740; six printing offices and six weekly newspapers employed 24 persons, and a capital of \$10,300; seven brick or stone, and 509 wooden houses were built, employing 644 persons, and cost \$212,085. The total amount of capital employed in manufactures was \$635,926.

No college has been established in this territory; but 23,040 acres of land have been granted for a university. The land has been advantageously located. There were in 1840, two academies, with 65 students; and 77 common and primary schools, with 1937 scholars. The 16th section in every surveyed township has been reserved from sale, for the use of schools, but yet belongs to the general government. Schools are supported in most of the neighbourhoods by a public tax.

The government of the territory was organized in 1836. The governor is appointed by the president of the United States, with the consent of the senate; and he is, ex-officio, the superintendent of Indian affairs. The legislative assembly consists of a council of 13 members elected for two years, and the house of representatives of 26 members, elected annually. Their pay is three dollars a day, and three dollars for every 20 m. travel. All the town and county officers are elected by the people.

WISMAR, a town and seaport of N. Germany, in Mecklenburg-Schwerin, cap. lordship of its own name, at the bottom of a deep bay at the confluence of the Stör with the sea, 18 m. N. by E. Schwerin; lat. 53° 49' 25" N., long. 11° 36' 15" E. Pop. 11,000. The harbour, which is very extensive, is commodious and safe, being nearly land-locked by the islands of Poel and Wollin. Close to the town there is from 8 to 8½ ft. water; in the inner roads there is from 12 to 13 ft., and in the outer from 16 to 20 ft. water. The town is fortified, and has six churches, three hospitals, several schools, &c.; with manufactures of tobacco, playing cards, sail-cloth, and other fabrics, breweries and distilleries. Ship-building is also carried on to some extent; and Wismar is second in commercial importance to no town in the grand duchy but Rostock. The articles of import and export are the same as at Rostock (which see), but the trade of the town is more limited. It appears to have been founded in 1229, and afterwards became one of the Hanse towns. It has, however, generally belonged to Mecklenburg since 1648. (*Dict. Geog. and Com. Dict.*)

WISSEMBOURG, a town of France, dep. Bas-Rhin, cap. arrond., on the Lauter, on the Bavarian frontier, 33 m. N. by E. Strasburg. Pop. in 1836, 5575. It is a fortified town, and of some importance, as it commands a defile leading from the plain of the Rhine into the Vosges mountains, and is connected with a system of military works stretching along the course of the Lauter for some distance, called the lines of Wissembourg. It has an old collegiate church, built in 1288; a Protestant church, in which is a bust of Luther; barracks, &c.; and manufactures of hosiery, straw hats, soap and earthenware. It originated in an abbey founded here by Dagobert II. in the

## WITEPSK.

7th century, and became a free town of the empire in 1297; it was annexed to France by the treaty of Ryswick. (*Hugo; Dict. Geog., &c.*)

WITNEY, a market town and par. of England, co. Oxford, hund. Bampton, on the Windrush, a tributary of the Thames, 10 m. W. by N. Oxford. Area of par. 7450 acres: pop. of ditto, in 1831, 5336; of the town, 3190. It is well-built and cheerful; the main street being on the high road between Burford and Woodstock. The town-hall, a stone building, has beneath it an area used for a market-place. Near it is the market cross, erected in 1683, and repaired by subscription in 1811; and in the High-street is the staple or blanket hall, a handsome stone edifice, built in 1721. The church, at the S. extremity of the principal street, is one of the handsomest in the county, being a large cruciform structure in the early English, decorated, and perpendicular styles, with a tower and lofty spire, ornamented with minarets. In the N. transept is a fine window; and within the building are several ancient monuments, and a handsomely carved and gilded burial chapel. The living, a very valuable rectory, being worth £1200 a year, is in the gift of the bishop of Winchester. Here, also, are places of worship for Wesleyans and Independents. The free grammar school, founded in 1660, for 30 boys, comprising a spacious school-room, library, and apartments for the master. Another free school, with a small endowment, was established in 1693. A school for the education, clothing, and apprenticeship of weavers' sons, was founded in 1782, and it has besides a national school and several almshouses.

Witney was long celebrated as a principal seat of the blanket manufacture; and, in the reign of Queen Anne, the weavers of the town and adjacent district were incorporated into a company. But the trade has long been of very inferior importance, and the weavers' corporation has fallen into disuse. Since the peace especially, and the introduction of machinery into the business, blanket weaving has rapidly declined at Witney, and most part of the fabrics now sold as Witney blankets are, in fact, made in Glamorganshire, and elsewhere. Some rough coastings, tidings for barges and wagons, and felting for paper-makers, are, however, made here; and, in 1838, there were in the parish five woollen-mills, employing 238 hands. (*Mills and Factories' Report, &c.*) The glove manufacture also employs a few hands; wool stapling is carried on to some extent, and the town has considerable trade in malt.

Witney was made a parliamentary borough in the time of Edward II., but its privilege was withdrawn on the petition of the inhabitants in the succeeding reign. It is governed by two bailiffs and two constables, chosen at the annual court leet; and a court baron, presided over by the duke of Marlborough, is opened twice a year. Witney is of considerable antiquity, and its name is stated to have been one of those given to the monastery of St. Swithin, Winchester, in the reign of Edward the Confessor. Market day, Thursday; fairs five times a year, for cattle and cheese. (*Beauties of England, art. Oxford; Lewis's Topog. Dict., &c.*)

WITEPSK, or WITEBSK, a gov. of European Russia, principally between the 55th and 57th degs. of N. lat., and the 26th and 32d of E. long.; having N.E. the gov. of Pskof, S.E. Smolensk and Moghilef, S.W. Minsk and Courland, and N.W. Riga. Area, 16,500 sq. m. Pop. in 1838, 717,700. Surface generally level, though on the banks of the rivers there are occasionally some low hills. Rivers and small lakes are numerous: of the former, which all flow towards the Baltic, the Dwina is the principal. Notwithstanding the soil is but of medium fertility, and agriculture is in a very backward state, more corn is produced than is required to supply the wants of the inhabitants. Hemp and flax are grown on a large scale, peas, beans, hops, fruits, &c. in the smaller inclosures. The forests are very extensive, 121,000 declatines of forest land belonging to the crown. The grass lands are also extensive, and a good many horses and cattle are reared, though of inferior breeds. The sheep yield only coarse wool; and honey is, also, of inferior quality. The mineral products and manufactures are insignificant; the last being, with the exception of a few cloth factories, almost wholly restricted to distilleries and tanneries. The trade of the government is facilitated by the Dwina and the canal of Berezina: it is principally in the hands of the merchants of the principal towns, many of whom are Jews. This government is divided into 12 circles; chief towns, Witepsk, the capital, Wieliz, Dunaburg, and Polotsk. In 1832 it had 24 public schools, attended by about 1100 pupils, besides three lycées, and seven private schools.

WITEPSK, a town of Russia, cap. of the above gov., on both banks of the Dwina, where it receives the Viteba, 330 m. S. by W. Petersburg. Pop. about 14,400. It is irregularly built, and is surrounded by old walls: it has numerous Greek and some Roman Catholic churches, convents, and synagogues. Though by far the greater number of its

## WITTENBERG.

houses be of wood, it has some dwellings of stone; a high school, a bazaar, an old castle, several hospitals, &c.; with manufactures of woollen cloths and tanneries. The Grand Duke Constantine, brother of the late and present emperor of Russia, died at Witepsk on the 27th June, 1832. (*Schnitzler; Posaart, &c.*)

WITTENBERG, a town of Prussian Saxony, formerly the cap. of the Electorate Saxony, now the cap. of a circ. of the reg. of Merseburg, on the Elbe, here crossed by a long wooden bridge, and on the road between Potsdam and Leipsic, 39 m. S.W. the former. Pop., 8400. (*Berghaus.*) Though metamorphosed from the quiet seat of a university into a garrison and fortified town, Wittenberg has a peculiarly dull and melancholy aspect. It is, however, highly interesting, as the cradle of the Reformation; Luther and Melancthon having been professors in its university, and their remains being deposited in its cathedral. A statue of the great reformer in bronze, by Schadow, of Berlin, was erected in the market place, in 1821. "It represents, in colossal proportions, the full length figure of Luther, supporting on his left hand the Bible, kept open by the right, pointing to a passage in the inspired volume. The pedestal on which the statue stands is formed of a solid block of red polished granite, 20 ft. in height, 10 ft. in width, and 8 ft. in depth. On each of its sides is a central tablet, bearing a poetical inscription, the import of the principal being that 'if the Reformation be God's work, it is imperishable; if the work of man, it will fall.' Over the figure is a very handsome light Gothic canopy, supported by four corner pillars, and surmounted by eight filigree-pointed pinnacles. This canopy is beautifully cast in iron. Taken altogether, the monument is a most creditable piece of workmanship, and does honour to the present state of the arts in Prussia." (*Granville's Trav.*, 1, 247-8.)

The graves of Luther and Melancthon in the cathedral are marked by two plain tablets. The altarpiece is by Lucas Cranach, a burgo-master of Wittenberg, the town-hall of which he has embellished with pictures of Luther and of the subjects of the ten commandments. It was against the walls of this church that Luther suspended his 95 theses against papal indulgences; and outside the E. gate of the town he publicly burned the bull for his excommunication. Luther's apartment in the old Augustine convent remains in much the same state as in his time; and the autograph of Peter the Great on the wall is preserved by a glass covering. Wittenberg, having ceased to be a capital, was found inadequate to the support of its university, which was accordingly removed to Halle. It still has, however, a gymnasium, an ecclesiastical seminary, &c., and is the seat of a board of taxation and of the usual circle courts. From its situation on the Elbe, in a fertile country, with both iron and coal in its neighbourhood, it possesses great commercial advantages; but its trade is insignificant, and it has only a few manufactures of linen and woollen goods.

It has frequently suffered from sieges, particularly in 1756; and in 1814, when it was taken by storm from the French. (*Dict. Geog., Hodgskin, Trav. in the N. of Germany; Strang, &c.*)

WOUBURN, a market town, and par. of England, county Bedford, hund. Manshead, on the great N. road, 38 m. N.N.W. London. Aren of par., 3300 acres. Pop. in 1830, 1827. The town consists of a main street, about 1-3d m. in length, with the market-cross nearly in its centre; and having been nearly burnt down in 1724, it is comparatively well laid out and well built. The market-house, a handsome edifice, originally erected by the Bedford family, was rebuilt at their expense, by Blore, in 1830. The same artist has, also, restored the church, an edifice in the perpendicular style built by the last abbot of Woburn, having a tower detached from its main body. In the chancel is, among others, a curious monument to Sir F. Staunton and his family. The living, a curacy, in the gift of the duke of Bedford, is worth £251 a year. The free school, founded by the earl of Bedford in 1582, has an income of £50 a year, and furnishes instruction to 150 boys on the Lancasterian plan. Almshouses, founded in 1672 for 24 widows, have an income of £30 a year, and there are several minor charities. Petty sessions monthly, and manorial courts occasionally, are held in Woburn. The inhabitants are either occupied in lace-making and straw plaiting or are employed by the Bedford family. Markets on Fridays; fairs four times yearly for farm stock.

Immediately on the E. of the town is Woburn park, with Woburn Abbey, the principal seat of the Duke of Bedford. It derives its name from its occupying the site of a Cistercian abbey, founded here in 1145, and granted to the Russell family in the time of Edward VI. The present mansion, which was built about 1745, has since been greatly improved and enlarged. It is a quadrangular edifice, its principal or W. front being of the Ionic order with a rustic basement. The interior of this noble pile is splendidly fitted up, and many of the apartments are enriched with val-

## WOLFENBUTTEL.

uable paintings, both by the old masters and British artists. The drawing room, thence called Venetian, has a fine series of 24 views in Venice, by Canaletto. In the hall is an ancient mosaic pavement, brought from Rome. A sculpture gallery, 138 ft. in length by 25 ft. in breadth, with a flat dome in its centre supported by 8 antique marble columns has a fine collection of antique marbles, including the famous Lanti Vase, of Parian marble, 6 feet 3 inches in diameter, and 6 ft. in height, exclusive of the plinth on which it stands. It is of the lotus form, has two magnificent handles, and is beautifully sculptured. This admirable specimen of ancient art was found among the ruins of Hadrian's Villa at Tivoli, of which it had no doubt formed a principal ornament. Here, also, is a fine cast of the Apollo Belvidere, Westmacott's statue of Psyche, &c. In the W. wing of the edifice is the temple of the Graces, erected in 1818, to receive Canova's magnificent group of the Graces, placed on a circular pedestal in the centre. The library is both extensive and valuable; and at one of its extremities is a room appropriated to Etruscan antiquities. The stables, riding-house, tennis-court, &c., are in a detached building, connected with the mansion by a colonnade,  $\frac{1}{2}$  m. in length. The greenhouse, designed by Sir J. Wyattville, is a handsome building, 140 ft. in length, and in which, with a great variety of valuable plants, are some fine statues. The park, 12 m. in circuit, surrounded by a wall 8 ft. in height, is beautifully diversified, abounding in wood and water, and well stocked with deer. (*Parl. Rep.; Railway Handbook, &c.*)

WOUBURN, p. t., Middlesex co., Mass., 10 m. N.W. Boston, 450 W. Incorporated in 1642. The Middlesex canal and the Lowell railroad pass through it. Horn pond, near its centre, is a beautiful sheet of water, furnished with a pleasure sail-boat, and has its outlet into Mystic river. It contains four churches, a Congregational, two Baptist, and a Universalist; twelve stores, 14 forges, two grist-mills, 26 saw-mills, seven tanneries; one academy, 110 students; nine schools, 120 scholars. Pop. 2993.

WOKINGHAM, or OAKINGHAM, a market town and par. of England, co. Berks, hund. Sonning, on the confines of Windsor forest,  $\frac{1}{2}$  m. S.E. Reading. Aren of par., 8450 acres. Pop. in 1831, 3139. The town consists of several streets, meeting in a central market-place, in which is the market-house and town-hall. The church, in the perpendicular style, is a fine old edifice. The living, a perpetual curacy, worth £126 a year, is in the gift of — Jacob, Esq. The Wesleyans, Baptists, &c., have meeting-houses here; and, besides Sunday schools, here is a free school, with an income of above £45 a year, at which between 30 and 40 boys are instructed on the Madras system. The aggregate income of the various charities in Wokingham amounts to nearly £530 a year. (*Digest of Charity Reps.*)

About 1 m. from the town is a hospital, under the direction of the Drapers' company, London, founded in 1655, for 16 poor men and a master. The inhabitants of Wokingham are employed principally in weaving silk stuffs and gauzes, and in making shoes. The town was incorporated by James I., and is governed by an alderman, recorder, seven burgesses, and other officers, chosen on Easter Wednesday, who hold petty sessions and some other courts. Formerly all the courts for Windsor forest were held at Wokingham. Markets, Tuesdays; fairs, April 23, June 11, October 11, and November 2, for horses and cattle. (*Parl. Reps., &c.*)

WOLCOTT, p. t., Lamollee co., Vt., 23 m. N. Montpelier, 539 W. Watered by Lamollee river and its branches, which afford water-power. Chartered in 1780. It has one store, one fulling-mill, one grist-mill, five saw-mills; 11 schools, 299 scholars. Pop. 910.

WOLCOTT, p. t., Wayne co., N. Y., 180 m. W. by N. Albany, 360 W. Bounded N. by lake Ontario, into which its streams flow. It contains three churches, a Presbyterian, Methodist, and Baptist; eight stores, one furnace, one fulling-mill, two grist-mills, 12 saw-mills, two tanneries; two academies, 97 students; 13 schools, 750 scholars. Pop. 2487.

WOLFBOROUGH, p. t., Carroll co., N. H., 39 m. N.N.W. Concord, 528 W. Bounded W. by Winnipiseogee lake, into which Smith's pond has its outlet. It contains six churches, a Congregational, two Methodist, two Free-will Baptist, and a Christian; seven stores, two fulling-mills, one woollen factory, three grist-mills, 16 saw-mills, five tanneries; one academy, 95 students; 15 schools, 736 scholars. Pop. 1918.

WOLFENBUTTEL, a town of Germany, duchy of Brunswick, cap. circ., on the Ocker, 8 m. S. Brunswick. Pop. 8500. It was formerly fortified but its defences are now in a ruinous state. It consists of the citadel, the town proper, called Heinrichstadt, and the quarters or suburbs of Auguststadt and Gotteslager. It is well built, and its streets, which are broad and regular, are paved, and watered by branches of the Ocker. It has several churches worthy of notice, and a magnificent ducal library, comprising not less

## WOLGA.

than 190,000 vols. It includes a large collection of bibles, among which is the one that belonged to Luther, with autograph notes; his marriage ring, doctor's ring, spoon, drinking-glass, and one of his many portraits by L. Cranach are also preserved here. (*Murray's Handbook*.) The old castle of the lords of Wolfenbittel has been converted into a prison; and the ducal castle now serves for a factory! It has a large workhouse, hospital, orphan asylum, gymnasium, and several city schools; and is the seat of the superior court of appeal for the states of Brunswick, Waldeck, and Lippe, and of several subordinate courts. It has manufactures of lacquered and japanned wares, paper hangings, leather, tobacco, &c.; with some trade in corn and linen yarn, and five annual fairs. Its neighbourhood is fertile, but marshy and unhealthy. (*Berghaus; Dict. Geog.*)

WOLGA, or VOLGA (an. *Rha*), the largest river of Europe, through the E. part of which it flows; its basin comprising the central part of European Russia, has the basin of the Dvina to the N., of the Don and Dniepr to the S., and of the Oural to the E. The Wolga was formerly considered as constituting a part of the boundary line between Europe and Asia; but since the limits of these continents have been removed to the Caucasus and the Caspian, its basin, with those of its tributaries, lie wholly within Europe. From its source to its mouth its length is estimated at about 2000 m., being about 200 m. longer than the Danube. The area of its basin has been supposed to include upwards of 636,000 sq. m., or considerably more than twice as much as the basin of the Danube, and eight times as much as that of the Rhine. (*Müller, Stromsystem der Wolga*, 79.)

The Wolga has its source in a small lake at the W. extremity of the gov. Tver, in lat. 57° 10' N., long. 32° 20' E., 220 m. S.S.E. Petersburg; on the E. declivity of the Valdai plateau, near the source of the S. Dwina, the Dniepr, and other large rivers, at an elevation of 895 ft. above the level of the sea. (*Müller*, 113.) It flows at first S.E., and afterward N.E. through the gov.s of Tver and Jaroslavl; at Mologa it turns to the E.S.E., which direction it generally pursues through Jaroslavl, Kostroma, Nijnii Novgorod, and Kazan to the confluence of the Kama, about lat. 55° 8' and long. 49° 30'. Thenceforward it runs generally S.S.W. through the gov.s of Simbirsk and Saratof to Tzaritzin, where it approaches within 32 m. of the main stream of the Don, their confluence being prevented by an intervening chain of hills.

It then turns again to the S.E. through the gov. Astrakhan, and pours itself into the Caspian, on its N.W. side, through an extensive delta, by more than 70 mouths, the W. and largest of these being in lat. 46° N., and long. 48° E. Throughout its long course it waters, with its tributaries, some of the most productive portions of European Russia and the region which was anciently the nucleus of the Russian monarchy. Tver, Jaroslavl, Kostroma, Nijnii Novgorod, Simbirsk, Saratof, Astrakhan, and several other towns are situated on the Wolga; and Kazan is on one of its tributaries, within a short distance of the main stream.

The principal affluents of the Wolga are the Tvertza, Mologa, Sheksna, Unja, Veltuga, and Kama, from the N. and E., and the Oka and Sura from the W. and S. The Kama, which is by far the largest, is, also, the last tributary of any consequence which it receives. It rises in the gov. of Viatka, about lat. 58° N., long. 53° E., and flows with a very tortuous course, at first N.E. to about lat. 60° 20', but afterward in general S. or S.W. through the gov.s of Perm and Kazan, and between those of Viatka and Orenburg. After a course of nearly 1000 m. it joins the Wolga, bringing with it a volume of water nearly equal to that of the latter. Its basin is supposed to comprise about one third part of that of the Wolga. Perm is among the towns on its banks.

The Oka rises in lat. 52° 10' N., long. 36° E., in the gov. of Orel; through which, and the gov.s of Tula, Kaluga, Moscow, Riazan, Tambof, Vladimir, and Nijnii Novgorod, it flows in a very tortuous, but mostly N.E. direction, joining the Wolga at Nijnii Novgorod after a course of nearly 700 m. Its basin is supposed to comprise 127,000 sq. m. (*Müller*.) It has several important affluents. Though rapid, it is navigable to Orel not far from its source. The waters of the Kama and Oka are, like those of the Wolga, remarkable for their purity; and all of them are famous for their fish. The Wolga is, in fact, believed to be more prolific of fish than any other European river; and its fisheries are an abundant source of employment and of food. The fish usually taken comprise sturgeon, the roes of which furnish the caviar, of which vast quantities are sent from Astrakhan to all parts of Russia, with salmon, sterlet, tench, pike, perch, beluga, &c. The sterlet (*acipenser stellatus?*), a small kind of sturgeon, supposed to be peculiar to the Russian and Siberian rivers, is much prized by the Russian epicures. Exclusive of caviar, the exports from Astrakhan include large quantities of cured fish. (*Müller*, p. 627; *Mod. Trav.*, xvii.)

## WOLVERHAMPTON.

From its abounding with islands, particularly in the lower part of its course, the breadth of the Wolga is very variable. At Tver, however, it is nearly 600 ft. in breadth; at Nijnii Novgorod, after it has received the Oka, about a verst, or 1200 ft.; and at Astrakhan it is usually 1½ m. across. But this is not the case during the entire year, for, on the melting of the ice and snow in spring, it is subject to great risings, and inundates large tracts of the surrounding country. The rise begins in April; its height varies greatly in different places, but is greatest in the middle portion of the river's course. At Tver the total rise is about 12 ft. above its summer level; at Jaroslavl and Nijnii Novgorod 18 or 20; at Kazan 25 or 30; and at Saratof from 30 to 40 ft.! But downwards beyond this point, after which the Wolga receives no affluent of any consequence, and its bed becomes more capacious; the height of its rise gradually diminishes, being at Tzaritzin from 25 to 30 ft., and at Astrakhan only from 6 to 8, or seldom so high as 12 ft. The time of subsidence also varies considerably in different parts: at Nijnii Novgorod the river is commonly confined again within its bed by the beginning of June; at Kazan not till the middle of the same month; and at Astrakhan it does not diminish to its ordinary height till after the summer solstice. According to recent discoveries, the surface of the Caspian is 101 ft. below the level of the Black sea, which would give to the Wolga (estimating its course at 2000 m.) an average descent of about 5½ inches per mile: from the junction of the Kasan with the Wolga, the fall of the latter, Humboldt says, is greater than that of either the Amazon or the Nile, and almost as great as that of the Oder. (*See Geog. Journ.*, viii., 135.) Though rather a rapid river (*Pallas*, i., 25), yet, as it runs through a flat country, with an immense volume of water, in a bed unbroken by cataracts, though not free from sandbanks, it is navigable for flat-bottomed boats nearly to its source. Not far below this point it is connected by a canal with the S. Dwina, establishing a direct water communication between the Caspian and the Baltic! The Ivanofska canal, in the government of Tula (which unites the Upa, a tributary of the Oka, with the Don), opens a communication between the Caspian and the Black sea; and, by means of the Vischnie Volotchok canal, between the Msta and Tvertza rivers, and the canal between the Sestra and Istra, in the gov. of Moscow, Petersburg and Moscow are directly connected. Other canals connect the basin of the Wolga with that of the N. Dwina, the lake Onega, &c.: and nowhere else has so extensive a system of inland navigation been effected by artificial means, with so little labour. This navigation is, however, suspended by the frost for at least 160 days each year.

Though the situation of the Wolga, remote from the great marts of Europe, Asia, and Africa, with its embouchure in the Caspian, renders it of much less commercial importance than it would be under other circumstances, it is still the main artery of Russia, and the grand route of the internal traffic of that empire. It has been estimated that in the first 30 years of the present century, from 600 to 700 vessels a year came down the Wolga to Astrakhan, while from 300 to 460 sailed from that port to others on the upper course of the river. Unfortunately, it would seem as if the Wolga had been for some considerable period decreasing in depth; and it is said that of late years sandbanks have accumulated so much, particularly between Nijnii Novgorod and Kazan, that the vessels laden with salt from Perm, which in the early part of last century used to bring cargoes of from 130,000 to 150,000 pounds, can now only convey cargoes of about 90,000 pounds; and in the portion of its course now referred to, it is navigated with difficulty even by the two-masted vessels of Astrakhan. (*Müller, Das Stromsystem der Wolga; Berghaus; Stein's Hand-book der Geog.; Dict. Geog.*, &c.)

WOLSHINGHAM, or WALSHINGHAM, a market town and par. of England, co. Durham, Darlington ward, on the Wear, 12½ m. W.S.W. Durham. Area of par., 24,780 acres. Pop., in 1831, 2239. The town is pleasantly situated, but irregularly built. The church is an ancient structure, with a beautiful font of Weardale marble. The living, a valuable rectory worth £791 a year net, is in the gift of the bishop of Durham. The remains of an old manor-house, belonging to the former bishops, and enclosed by a moat, are near the church. The grammar school, founded in 1612, with an income of above £65 a year, besides 30 pay scholars, supplies gratis instruction to 26 boys, in reading, writing, arithmetic, and the classics. Here, also, are several other schools, and endowments for the poor not receiving parochial relief. The inhabitants are principally employed in the manufacture of linen and woollen cloths, tools, and agricultural implements; or in the coal, lead and limestone works in the vicinity. Petty sessions are held weekly; and a court-leet twice a year, at which debts of 40s. are recoverable. Markets on Tuesdays; fairs, May 12 and Oct. 2.

WOLVERHAMPTON, a parl. bor., market town, and

## WOLVERHAMPTON.

par. of England, co. Stafford, hund. Selsdon, in one of the principal iron manufacturing districts, and at the junction of six principal roads, 13 m. N.W. Birmingham. The par., which is of great extent, comprises five townships, four of which, including the towns of Bilston and Willenhall, with the adjoining par. of Sedgley, are included in the par. bor.; the area of which amounts to 16,630 acres. Pop. of do., in 1831, 67,514, of whom 24,732 belonged to Wolverhampton township. Pop. of the latter, in 1841, 36,189. Wolverhampton stands on an eminence commanding fine views of the surrounding country, and though irregularly laid out, is not ill built; but, from the many furnaces and forges in the town and neighbourhood it has a blackened appearance. There are some good modern residences in the suburbs. Four of the principal streets diverge from the market-place. The town is well lighted, partially paved, and supplied with water from wells sunk in the rock on which it is built. The collegiate church of St. Peter, on the most elevated position in the town, is a large cruciform structure, chiefly in the perpendicular, but partly, also, in the decorated and early English styles. It has a tower, the upper part of which is late perpendicular, and a much finer composition than the other portions of the church. The chancel is modern; the nave has a rich stone pulpit, and in the church yard is a rudely sculptured cross, much defaced by time. (*Rickman*.) This church was formerly considered one of the king's free chapels, and was attached, by Edward IV., to the deanery of Windsor. The living, a vicarage worth £193 a year, is in the gift of the dean of Windsor. St. John's church, a handsome stone edifice, on the S. side of the town, erected by subscription in 1761, is a curacy worth £300 a year, in the gift of the earl of Stamford. St. George's, a building of Grecian architecture, and St. Paul's, a Gothic structure, are comparatively recent, and two other churches are now (1842) in the course of being erected. Besides a Roman Catholic chapel, there are several Dissenting meeting houses, to all of which, as well as to the churches, well attended Sunday schools are attached. The free grammar-school, founded by Sir Stephen Jennings, a native of the town, who was lord mayor of London, in 1668, has an endowment yielding about £1200 a year. It is managed by 40 trustees, who allow the head master £500 a year. It is open to all boys of the par., and is, at present (1842), attended by about 140 pupils. Sir W. Congreve and Abernethy, the surgeon, were educated at this school. Besides a blue coat charity, for 36 boys and 30 girls, of very ancient foundation, with an income of £240 a year, there are national and British schools; and considerable funds exist for distribution among the poor. A dispensary was established, in 1821, for which an eligible building was erected in 1826, and in 1813, a union-mill, for grinding corn for the poor at a cheap rate, was built by shares at a cost of £14,000. Wolverhampton has also a public news-room with an extensive library, assembly and concert rooms, and mechanics' institute. W. of the town is a fine race course, with a grand stand, where races take place annually in August. Two weekly newspapers are published in the town. Most departments of the hardware manufacture, excepting cutlery, are carried on here and in the adjacent town of Bilston and the district. Wolverhampton has been long celebrated for her locks, of which she almost exclusively engrossed the manufacture down to a comparatively late period. At present, however, the most expensive and best locks are made in the metropolis, and the lock trade is also carried on in Birmingham; but this town still enjoys the largest share of the business. Probably, however, the manufacture of japanned ware and tinned plates may be regarded as her staple business; and in addition she furnishes carpenters' tools, files, screws, hinges, steel mills, machinery, &c. Immense quantities of nails are made in the surrounding villages.

Wolverhampton, Bilston, and the other places within the limits of the parl. borough, are wholly indebted for their rapid rise and large population to the facilities they enjoy for carrying on the iron trade. In the vicinity are all but inexhaustible mines of coal and ironstone, the main bed of coal being 30 ft. thick, with strata of ironstone above and below! The district has also the further advantage of being connected by numerous canals with all the great shipping ports of the empire. Under such circumstances, we need not be surprised at the rapid progress it has made since 1772, when there was only one blast furnace at Bilston! whereas in 1842 there was in the parl. borough no fewer than 55 blast furnaces, capable of producing more than 4000 tons of iron a week! Indeed, the whole country to the S. and E. of the town is covered with furnaces, forges, rolling mills, foundries, ironstone and coal pits; and though the trade be at present (1842) much depressed, there being about 24 furnaces out of blast, the advantages enjoyed by the district are such as can hardly fail to ensure its prosperity. The Grand Junction railway has a station 1 m. E. of the town, and here the line attains its greatest elevation of 440 ft. above the sea level. The Birmingham, Staffordshire

## WOODBIDGE.

and Worcestershire, and Birmingham and Liverpool canals unite about 1 m. N. from the town, affording, as already stated, a ready communication with all parts of the kingdom. The Wolverhampton and Staffordshire Banking company, established in 1831, has its office in this town.

The town is under the jurisdiction of the county magistrates, but is locally governed by two constables and other officers, chosen at an annual manorial court. Petty sessions for the hund. are held here, and a court of requests monthly for debts under £5.

The Reform Act conferred on Wolverhampton, Bilston, and the district included within the parl. borough, the important privilege of sending 2 members to the House of Commons. Reg. electors in 1839-40, 2643.

The new poor law was introduced here in 1836, when the townships of W. Hampton, Bilston, Willenhall, and Wednesfield were formed into the "W. Hampton Union." The population of these townships amounted, in 1831, to 46,931; and in 1841, to 63,185. A superior and spacious "Union-house" has been lately erected.

Though of great antiquity, the earliest records of Wolverhampton date only from the end of the 10th century, when Wulfruna, duchess of Northampton, founded a monastery here, of which, however, there are now no remains. A fire, which continued for five days, destroyed the greater part of the town in 1590.

Market days, Wednesday and Saturday; fairs, July 10th, 11th, and 12th, for cattle and various merchandise. (*Parl. Rep.*; *Priv. Inf.*)

WOOD, county, Va. Situated in the N.W. part of the state, and contains 1223 sq. m. Bounded N.W. by Ohio river. Drained by Little Kanawha river, and its branches. It contained, in 1840, 7601 neat cattle, 13,885 sheep, 12,462 swine; and produced 71,339 bushels of wheat, 203,637 of Indian corn, 85,199 of oats, 21,491 of potatoes, 87,091 pounds of tobacco, 5844 of sugar. It had 25 stores, four flouring-mills, 10 grist-mills, 21 saw-mills, one oil-mill, four tanneries, one printing-office, one weekly newspaper; four academies, 319 students; 13 schools, 307 scholars. Pop.: whites, 7243; slaves, 624; free coloured, 56; total, 7923. Cap., Parkersburg.

WOOD, county, O. Situated toward the N.W. part of the state, and contains 590 sq. m. Bounded N.W. by Maumee river, which is navigable for vessels requiring 6 ft. of water to Perrysburg, 18 m. from Lake Erie. Drained by Portage river, and its branches. It contains a large portion of the "Black Swamp," an unhealthy spot, but capable of being drained. It contained, in 1840, 6497 neat cattle, 2790 sheep, 10,624 swine; and produced 29,004 bushels of wheat, 1522 of rye, 112,508 of Indian corn, 4150 of buckwheat, 39,469 of oats, 54,250 of potatoes, 2049 pounds of tobacco, 42,175 of sugar. It had 12 stores, four flouring-mills, one grist-mill, 10 saw-mills; 27 schools, 717 scholars. Pop. 5357. Capital, Perrysburg.

WOODBIDGE, a market town, par., and river-port of England, co. Suffolk, on the Deben, 8 m. from the sea, and  $7\frac{1}{2}$  m. E.N.E. Ipswich. Area of par. 1650 acres. Pop. of do., in 1831, 4769. The town is on the slope of a hill, and consists of two principal streets, an open space called Market-hill, and some narrow thoroughfares; it has many good houses, and is tolerably well paved and lighted. In the centre of the Market-hill is the sessions house, a brick edifice, in the lower part of which the corn market is held. The church, a noble edifice, said to date from the time of Edward III., consists of a nave, chancel, and two side aisles, the roofs of which are supported by 14 fine slender pillars; its outer walls are constructed of black flints, and it has a square tower 108 ft. in height. On its S. side was anciently an Augustine priory, founded by one of the Rous family in the 12th century. The living, a perpetual curacy, worth £439 a year, is in the gift of the Rev. T. Salmon. Here, also, is a free grammar school for 10 boys, sons of the poorer inhabitants of the town, who are to be instructed in Latin and Greek, and fitted for the university; with national, Lancastrian, and Sunday schools. Almshouses for 12 poor men and 3 women, founded and endowed in 1587, had, in 1825, an income of £570 a year; but as this income was derived from a lease of property in Clerkenwell, in the city of London, entered into about 60 years previously, and then about to expire, it is now probably much greater. The income of the town lands is chiefly applied to parochial repairs, &c. A small theatre was erected in 1813.

Woodbridge is a member of the port of Yarmouth, and the Deben being navigable thus far, for vessels of 120 tons, it has a considerable trade with London, Hull, Newcastle, &c., exporting corn, flour, and malt, and importing coal, timber, wines, spirits, groceries, &c. It has several docks for the building of vessels, with convenient wharfs and quays. Woodbridge is governed by a visitor and two guardians, chosen by the parishioners. Quarter sessions for the liberty of St. Ethelred and for six adjacent hundreds are held here; and petty sessions weekly. Market day, Wednesday; fairs, April 5 and Oct. 31, for cattle.

## WOODBURY.

**WOODBIDGE**, p. t., Middlesex co., N. J., 43 m. N.E. Trenton, 309 W. Drained by Rahway river. It contains a part of Rahway v. It was incorporated in 1680, and in 1682 there were 120 families in the township. It has a church, 22 stores, one cotton factory; one academy, 43 students; 16 schools, 491 scholars. Pop. 4321.

**WOODBURY**, p. t., Litchfield co., Ct., 50 m. W. Hartford, 398 W. Drained by Pomperaug river, and its branches. It contains four churches, two Congregational, a Methodist, and an Episcopal, eight stores, three fulling-mills, two woollen factories, two grist-mills, four saw-mills, three tanneries; 12 schools, 327 scholars. Pop. 1948. The village is built chiefly on one extended street, and contains three of the churches, and about 80 dwellings, some of them neat and handsome.

**WOODBURY**, p. v., capital of Gloucester co., N. J., 37 m. S.S.W. Trenton, 148 W. Situated at the head of navigation on Woodbury creek, which flows into Delaware river. It contains a spacious courthouse of brick, fire proof county offices, a jail of stone, three churches, a Presbyterian, Methodist and Friends, an academy, two public libraries, one of which belongs to the ladies, 10 stores, over 100 dwellings, and about 800 inhabitants.

**WOODBURY**, t., Huntingdon co., Pa. It has three stores, three furnaces, two forges, one flouring-mill, five grist-mills, 13 saw-mills, two tanneries, three distilleries; five schools, 146 scholars. Pop. 2102.

**WOODBURY**, p. t., Bedford co., Pa., 113 m. W. Harrisburg, 139 W. Drained by Frankstown branch of Juniata river, and by Yellow creek. It has 11 stores, four furnaces, eight flouring-mills, 11 saw-mills, one tannery, four potteries; one academy, 33 students; eight schools, 247 scholars. Pop. 3944.

**WOODCOCK**, p. t., Crawford co., Pa., 213 m. N.W. Harrisburg, 315 W. Drained by Woodcock creek. It has two stores, two fulling-mills, one flouring-mill, three grist-mills, 10 saw-mills, one oil-mill, one paper-mill, three tanneries, two distilleries, one brewery. Pop. 1921.

**WOODFORD**, county, Ky. Situated N.E. of the centre of the state, and contains 154 sq. m. Bounded W. by Kentucky river, by branches of which it is drained. It contained in 1840, 9633 neat cattle, 16,222 sheep, 21,852 swine; and produced 93,591 bushels of wheat, 35,681 of rye, 643,735 of Indian corn, 109,502 of oats, 15,845 of potatoes, 13,860 pounds of tobacco, 1410 of sugar. It had three commission houses in foreign trade, 27 retail stores, one cotton factory with 250 spindles, 20 flouring-mills, 29 grist-mills, 19 saw-mills, three tanneries, 13 distilleries; four academies, 104 students; four schools, 94 scholars. Pop.: whites, 5816; slaves, 5752; free coloured, 172; total, 11,740. Capital, Versailles.

**WOODFORD**, county, Ill. Situated N. of the centre of the state, and contains 470 sq. m. Drained by Mackinaw river, a tributary of Illinois river. Bounded W. by Peoria lake. Formed since the census of 1840. Capital, Woodford.

**WOODSTOCK** (NEW), a parl. and munic. bor., and market town of England, co. Oxford, hund. Wootton, par. of Bladon; on the small river Glyme, which supplies the significant piece of water in Blenheim park, 8 mi. N.N.W. Oxford. The old parl. bor. included only a portion of the town; but the modern parl. bor. includes the whole of the latter, with a district extending about 4 m. on every side, comprising several adjacent villages and hamlets, and having an area of 21,640 acres, and a pop. in 1831, of 7355. This is a clean, well built, country town; the streets are well paved, and well kept, and many of the houses, which are mostly of stone, are of a superior class; but it has, notwithstanding, a dull and inanimated appearance, and is not prosperous. The church is a handsome structure, partly rebuilt in 1785, when a tower was added to its W. extremity. The living is a curacy annexed to the rectory of Bladon, worth £239 a year, and in the gift of the duke of Marlborough. Here, also, are places of worship for Baptists and Wesleyans. The town hall, erected in 1766, at the expense of the then duke of Marlborough, has under it the market place. A free grammar school, founded in 1585, affords instruction to about 20 boys; but the endowment for its support is small, and the master's salary of £30 a year is partly made up by the corporation; it has, besides, an endowed school, with an income of £75 a year, in which 24 children are educated, partially clothed, and apprenticed, with almshouses for widows; and several minor charities.

Woodstock had formerly a considerable manufacture of polished steel articles, much esteemed for their delicate workmanship; but this business is now nearly or wholly extinct. The manufacture of doe-skin gloves, which was introduced at a later date, is now almost the only branch of industry carried on in the town. In 1835, upwards of 1200 hands mostly women and girls, were employed in this manufacture in Woodstock and its vicinity, who were supposed to produce about 500 pairs of gloves per week. But this branch has, also, declined in the interval, principally,

## WOODSTOCK.

as is understood, in consequence of the substitution of thread and cotton for leather gloves; and in consequence of this decline, and of the embarrassed situation of the Marlborough family, the prosperity and population of the town have both fallen off.

The borough received its present charter of incorporation from Henry VI.; but that by which it has been lately governed dates from the 16th of Charles II., the corporate body consisting of a mayor, four other aldermen, a high steward, recorder, and other officers. The annual court leet or sessions, granted to the borough by charter, has been discontinued since 1829; but petty sessions, and a court of record are opened monthly. The borough has no jail, but a small lock-up house.

Woodstock was a borough by prescription previously to its incorporation, and returned two members to the House of Commons from the 13th Elizabeth down to the passing of the Reform Act, which deprived it of one member, at the same time that the boundary of the parl. borough was altered, as already stated. Previously to the Reform Act the franchise was vested in the mayor, aldermen, and freemen of the borough; but substantially, and in fact, it was a nomination borough, belonging to the duke of Marlborough. Registered electors, in 1839-40, 369. Market day, Tuesday; fairs, seven times a year, chiefly for cattle, horses, cheese, and hardware.

Old Woodstock stood in a low situation a little N. of the town, on the Glyme, and has now only a few houses and one ancient mansion. Woodstock was long a royal residence. A palace, or manor-house, on the N. bank of the Glyme, was the residence of Henry II., and the scene of some of the adventures of the fair Rosamond; but all traces of this building have long since disappeared. Edward I. held, in 1275, a parliament at Woodstock: and it was also the birth place of his second son Edmund, and of the eldest son of Edward III., the illustrious Black Prince. It was subsequently inhabited by several of our monarchs; and Elizabeth was for awhile imprisoned here. But every part of this more recent palace has also been pulled down.

Chaucer, the great improver of the English language and versification, is supposed by many to have been a native of Woodstock; where it is alleged, he first saw the light in 1328. At all events he frequently resided in the town; and some traces still exist of the house which he occupied.

At present Woodstock derives its whole importance from its being in the immediate vicinity of Blenheim palace and park, the seat of the duke of Marlborough. In previously noticing this noble seat (*SEE* BLEHEIM PARK, vol. I.) we omitted to notice the library, originally intended for a picture gallery, and one of the finest apartments in England. It extends along the whole of the W. front, being 183 ft. in length, and beautifully proportioned. It contains the Sunderland collection of books, comprising 17,000 vols.; and a fine statue of Queen Anne by Kysbrack. In the chapel is a splendid monument by the same sculptor, in honour of the great duke of Marlborough and his duchess. (*Bound. Rep.; Munic. Corp. append.; Priv. Information.*)

**WOODSTOCK**, p. t., capital of Windsor co., Vt., 51 m. S. Montpelier, 485 W. Drained by Otta Quechee river and its branches, which afford water-power. The principal village is one of the largest in the county, and among the principal in the state, built on both sides of Otta Quechee river. The houses are mostly situated around a beautiful park, and it contains a handsome courthouse, a jail, five churches, a Congregational, Methodist, Episcopal, Christian, and a Universalist, the Vermont Medical college, 359 dwellings, and about 1400 inhabitants. The town contains one church, besides the above, 12 stores, one fulling-mill, two woollen factories, three grist-mills, five saw-mills, three tanneries, two printing-offices, two weekly newspapers; one academy, 25 students; 16 schools, 1042 scholars. Pop. 3315.

**WOODSTOCK**, p. t., Windham county, Ct., 43 m. E.N.E. Hartford, 379 W. Watered by Muddy brook, a tributary of Quinnebaug river, and by a branch of Nachaug river. Muddy brook affords good water-power. It contains six churches, four Congregational and two Baptist, 16 stores, three woollen factories, three cotton factories with 3292 spindles; three academies, 95 students; 20 schools, 909 scholars. Pop. 3053.

**WOODSTOCK**, p. t., Ulster co., N. Y., 69 m. S. Albany, 328 W. Drained by tributaries of Esopus creek. It contains two churches, two stores, one glass house, one glass-cutting works, two grist-mills, 12 saw-mills; seven schools, 372 scholars. Pop. 1691.

**WOODSTOCK**, p. v., capital of Shenandoah co., Va., 150 m. N.N.W. Richmond, 104 W. Situated on the W. side of the N. fork of Shenandoah river, about 1 m. from its bank. It contains a courthouse, jail, county offices, a masonic hall, an academy, three churches, a Lutheran, Methodist, and German Reformed, a number of stores, 125 dwellings, and about 1000 inhabitants.

## WOODVILLE.

**WOODVILLE**, p. v., capital of Wilkinson co., Miss., 135 m. S.W. Jackson, 1145 W. It contains a courthouse, jail, a market-house, a bank, two academies, three churches, a Methodist, Episcopal and Baptist, a number of stores, and about 800 inhabitants. A railroad 27½ m. long, connects with St. Francisville, La.

**WOOLER**, a market town and par. of England, co. Northumberland, Glendale ward, on the E. declivity of the Cheviot hills, 42 m. N.N.W. Newcastle. Area of par. 4620 acres. Pop. in 1831, 1926. The town is of high antiquity, and at one period was a good deal resorted to by invalids. It consists of several streets branching from the market-place, and has a public library, mechanics' institute, dispensary, and many dissenting places of worship. The church is a neat but plain building, erected about the middle of last century: the living a vicarage worth £478 a year, is in the gift of the bishop of Durham. A free school, with a small endowment, is the only charity mentioned as existing here. Courts leet and baron are held annually by the lord of the manor. In the neighbourhood are the vestiges of ancient encampments. At Homildon, about 2 m. from the town, is a pillar, erected to commemorate the total defeat in 1402, of an army of 12,000 Scotchmen, under Earl Douglas, by the forces of the Earls Percy and March. Markets on Thursdays; fairs, May 4th, October 27th, and Whit-Tuesday.

**WOOLWICH**, a parl. bor., market, and seaport town of England, co. Kent, on the S. Bank of the Thames, 7 m. E. London, and 2½ m. E. Greenwich. Pop. in 1831, 17,661. The older parts of the town, near the river, have narrow streets, and are mean, dirty, and badly built, with little prospect of being much improved; but in the more modern portions, and especially between the old town and the barracks, the streets and houses are of an improved and far more respectable description. Woolwich, however, derives its entire importance from its dockyard, arsenal, and other great naval and military establishments; and is principally inhabited by individuals dependent upon or connected with them. The church in a conspicuous situation, with a tower at the W. end, was rebuilt towards the middle of the last century. The living a valuable rectory, worth £740 a year nett, is in the gift of the bishop of Rochester. Besides the church, Woolwich has an ordnance chapel on the road to Plumstead, a chapel in the barracks, a proprietary episcopal church near the arsenal, a Scotch church, and various meeting-houses for different classes of dissenters. The charitable institutions comprise an almshouse for 5 poor widows, endowed in 1560, by Sir Martin Bowes, lord mayor of London, and two charity schools, one for 30 girls, and one for educating, clothing, and apprenticing poor orphan boys, sons of such shipwrights as have served their apprenticeship in the dock-yard; and national and other public schools have been established, in which about 900 children are daily instructed, exclusive of the Sunday-schools attached to the parish church and the dissenting chapels, where upwards of 2000 children are taught. Among the places of amusement is a small theatre. A mineral spring on the N. of the common possesses valuable medicinal properties.

**Dock yard.**—This, though not the most extensive, is the most ancient royal dock-yard in the kingdom. Some uncertainty exists as to the precise date, but it is believed to have been established as early as 1512; and it is certain it was placed upon a permanent footing in the latter part of the reign of Henry VIII. It presents a frontage to the river of nearly 4000 ft., but is of irregular breadth. It has been of late years, greatly improved and extended, and contains at present about 55 acres; but it is in contemplation to increase it to about 62 acres. It has six building slips; two for first-rates, two for line-of-battle ships of inferior size, and two for smaller ships.

Although some very large ships have been built in this dock-yard at different periods, such as the Royal George (lost at Spithead), the Nelson in 1814, and the Trafalgar in 1841, yet considerable disadvantages are felt in the constructing of such ships from the shallowness of the water and the accumulation of mud in the river; and it has, in consequence, been determined to build the largest class of men-of-war in the other dock-yards, and to make this the principal yard for steam-ships belonging to the royal navy. With this intention a factory was built in 1839, consisting of two ranges of handsome and substantial buildings, each 440 feet in length by 26 in breadth, for the manufacture of steam-engines and boilers. The factory contains a foundry and forges, with fan-blowing machines for the furnaces, and a variety of machines for punching, shearing, plate-bending, drilling, boring, planing, turning, shaping, bolt-screwing, &c., &c. The machinery has been made by the most eminent manufacturers in the kingdom, and embodies the results of all the improvements of the last twenty years; its skilful selection and adaption reflecting infinite credit on the chief engineer.

The moving power of the factory is a steam-engine of 20

## WOOLWICH.

horse-power. Another building is to be immediately erected, at an expense of £14,000, 233 ft. in length by 66 ft. in breadth, with a chimney 190 ft. in height, into which all the flues of the factory will be led. This addition will give the means of doubling the work performed, and will, it is expected, enable the admiralty to furnish the whole of the steam-ships with the necessary machinery.

There is at present an outer basin, comprising an area of 120,000 sq. ft., in which ten or a dozen steam-ships of different sizes may conveniently lie. An inner basin of 160,000 sq. ft. area, on the site of the mast pond, is also in a forward state of construction, and when completed will allow two first class steam-ships to lie alongside the factory and be simultaneously fitted with their engines, boilers, and other machinery. A magnificent dock, entirely composed of massive blocks of granite, has lately been built, capable of receiving a 120-gun ship; a second is nearly completed, and it is proposed to construct two similar docks for steamships, making four in all.

The smithery, constructed by the late Mr. Rennie, is on a very grand scale, and is suitable for the forging of the largest anchors, and other heavy articles. It contains 67 forges, with 2 lift hammers weighing 4½ tons each, and 3 tilt hammers of 18 cwt. each; there are also 3 air and 2 blast furnaces, with a blasting apparatus of a very scientific description. These are two steam engines in the smithery, one of 20 and another of 14 horse-power. The anchors are tested by a powerful hydraulic machine, made by Brannah, capable of applying a pressure of 100 tons. The pitch and tar vault is constructed so as to admit of its easy inundation in case of fire. The ships now (1842) building are the Royal Albert, 120; Boscawen, 70; Chichester, 50; Amphion, 36 guns; with two steam-ships. Frames are in preparation for the Hannibal of 90 guns, a brig and 2 steam-ships.

The number of workmen of all kinds employed amounts at present (1842) to 1300, exclusive of about 700 convicts, landed daily from the Warrior hulk, moored off the yard who are generally employed in the most laborious occupations.

The mast houses, mast slip, mast ponds, warehouses, &c., are all on a very extensive scale, and the whole is thoroughly organized and in the most efficient state. A large ropery was formerly attached to the dock-yard, but, its situation not admitting of the introduction of machinery, it has been abandoned, the buildings removed, and the site built upon.

**Arsenal.**—Woolwich is the head quarters of the ordnance military corps, viz., the royal horse and foot artillery, the royal sappers and miners, &c.; and it is also the principal establishment in the kingdom for the provision of warlike materiel for the navy and army. The royal arsenal, formerly called the Warren, admirably situated on the E. side of the town, appears to have been used as a gun-wharf and powder magazine from about the middle of the 17th century; but it was not until the removal of the foundry from Moorfields, in 1720, that it began to assume the importance it has since attained. It comprises within its boundaries about 110 acres, or, including a part of the Plumstead marshes, used as a review and practising ground, from which it is separated by a canal communicating with the Thames, it may extend over nearly 300 acres. The following are the principal departments into which it is divided: 1st. The royal brass foundry, erected by Sir John Vanbrugh, in 1719, on a site chosen by a young Swiss named Schlich, under whose direction the foundry had been placed on its removal from London. In it are now cast all the brass ordnance used in the service. It contains 3 furnaces, the largest capable of melting 16 tons of metal, sufficient for about twelve 24-pounders; with accommodation for making moulds, boring, turning, and polishing the guns. Iron guns are also bored up from smaller to larger calibres; these, however, are not made by the board of ordnance, but are supplied by private manufacturers. In 1809, 385 guns were cast in the foundry, which appears to be the highest number cast in one year. The statue for the duke of York's monument was cast here. Horse power has hitherto been used, but a steam-engine of 12 horse-power has recently been erected. In this department, which is under the inspector of artillery, all guns are proved before being used.

2nd. The royal laboratory, in which every kind of ammunition, viz. ball and blank cartridge, &c., is made up; Congreve and other rockets, grenades and fireworks manufactured; shells and spherical case-shot, or Shrapnell shells, filled, &c. A machine, invented by Napier, for making musket and pistol balls by compression, has been lately introduced, which acts with great ease and rapidity, and seems to be far preferable to the old mode of casting. Percussion caps for the service have also, within the last two years, been entirely made in the laboratory; the portion of the machinery designed for filling and finishing the caps is exceedingly ingenious, and performs its work with great rapidity and safety, one man and four boys being, with its as-

## WOOLWICH.

sistance, able to fill and complete 150,000 caps a day! All this machinery is, however, at present worked by hand. Two model rooms are attached to this department, containing specimens of every firework used in war, and many other interesting objects.

3rd. The royal carriage department in which every kind of ship and land gun carriage is made and repaired; with traversing platforms, ammunition wagons, carts, &c. Copper-lined powder-cases are also made. The sheets of copper are timed instantly, on both sides, by a process displaying much ingenuity, the invention of one of the working timen employed here, superseding a tedious and unwholesome operation before in use, and effecting a considerable annual saving. This establishment contains a planing machine, invented by Bramah, set up in 1806, with apparatus for various operations in turning of wood and metal, worked by a steam-engine of 12 horse-power. Here is also a saw-mill, by Sir J. Brunel, set up in 1812, containing six frames of saws, wrought by a steam-engine of 20 horse-power. The smithy has about 20 forges.

The works in the manufacturing departments of the arsenal are in a perfectly efficient state; but, generally speaking, the machinery, except for percussion caps and musket balls, does not seem to be of the most modern or scientific kind. The separation of the departments under different authorities appears also to be in some degree adverse to the more general employment of steam power, except at an increased expense, thus leaving more to be effected by manual labour than would be requisite if a system of greater concentration and combination were adopted.

4th. The guns, which are arranged in the open air, comprise complete field and battering trains, mortars, howitzers, canonades, &c., with the guns belonging to many of the ships of war out of commission, numbering, in the whole, about 3000 pieces of brass, and 19,000 pieces of iron ordnance, of 200 different varieties. The shot and shells, arranged in pyramidal piles, amount to nearly 2,000,000 in number. These, as well as every other description of store required for naval or military equipment, are kept in constant readiness, under the charge of the *storekeeper's department*. The various piles of brick buildings containing these articles, or appertaining to the departments before enumerated, are constructed on the grandest scale: and are as complete and efficient as can well be imagined. There are two *batts*, one within the arsenal and the other in the marshes, for the practice and proof of ordnance; but, as the shot frequently cross the river, the service is liable to constant and serious interruptions from the passing of ships. A new practice range of nearly 3 m. extent, towards Erith, is therefore in course of formation, which will be free from the inconveniences now experienced; and will besides allow of the practice, at long ranges, of the new heavy guns (42 to 84 pounders), on Monk's and Miller's principles. The number of artificers, labourers, and boys employed in the various departments of the arsenal may amount to about 700, exclusive of the convicts belonging to the *Justitia hulk*, stationed on the river, opposite to the arsenal, amounting to about 300.

The royal military academy, an institution that has considerably raised the professional character of the corps of royal engineers and the royal regiment of artillery was founded in 1719, but was not finally arranged until 1741. The establishment, which has varied at different periods, has at present 165 pupils, termed gentlemen cadets. It is under the direction of the master-general and board of ordnance for the time being, and has a lieutenant-governor, inspector, and other officers. For the literary department, there is a professor of mathematics, and 23 other professors and masters for mathematics, fortification, plan-drawing, surveying, chemistry, landscape-drawing, German, French, history, geography, &c. The academy has numbered among its professors several eminent men, among whom may be specified Mr. Thomas Simpson, Dr. Hutton, author of the *Mathematical Dictionary* and other valuable works, Mr. Bonycastle, Dr. Olynthus Gregory, &c. The establishment formerly cost the public £8000 or £10,000 per annum, for half the number of cadets now educated; but for several years past it has been conducted upon a self-supporting principle: and with a much enlarged and a more efficient establishment, it now nearly maintains itself. The scale of payments to be made by the friends of cadets is as follows:

	Per ann.
Sons of noblemen and private gentlemen, not being officers of the army or navy	£125
Sons of admirals, and generals with regiments	80
Sons of generals without regiments	70
Sons of captains and commanders in the navy, and colonels and regimental field officers of the army	60
Sons of all officers of the navy and army under the above ranks	40
Sons of officers who have died in the service, and whose families are in pecuniary distress	20

## WOOSTER.

The sons of civil officers of the army and ordnance are admitted upon payment of the sums required from military officers of corresponding ranks.

The cadets receive an annual allowance of £45 12s. 6d. which is considered sufficient to supply every necessary article except linen. The education is excellent; the standard having been much raised of late: when the course is completed, the cadets, if found duly qualified, receive commissions in the royal engineers or royal artillery, according to their merit.

The academy, formerly within the arsenal, was removed in 1806 to a fine building on the upper end of the common, about 1 m. S. from the town. This edifice, which was built by Wyatt, consists of a centre and two wings, united by corridors, with a range of building behind, containing the hall, servants' offices, &c. The centre forms a quadrangle, with octagonal towers at the angles; and, besides a variety of other apartments, contains the four teaching rooms or academies, as they are termed. The wings contain the apartments for the cadets and chief officers. The building, which is about 200 yards in length, is of brick, stuccoed over.

The barracks, erected for the accommodation of the royal artillery at different periods from 1783 to 1810, are situated on the N. brow of the common, and form a most extensive pile of building, calculated to accommodate 3000 officers and men, and 1200 horses. The principal front, 340 yards in length, consists of six ranges of brick building. The entrance consists of a handsome gateway, with Doric columns and military trophies. Exclusive of other apartments, this noble building contains a library and reading-room for the officers, a mess room, a guard room, a chapel capable of accommodating 1000 persons, &c. At a little distance from the back of the chapel is a riding-school, on the model of an ancient temple.

The barracks for the corps of royal sappers and miners are a short distance to the N.E. of the artillery barracks: they are constructed for 260 men.

The parade is in front of the barracks; and the open space on the common affords sufficient room for exercising the soldiers in the throwing of shells and ball-firing. On the E. side of the barracks, on the descent leading to the arsenal, is the ordnance hospital, an extensive edifice, calculated to accommodate about 500 patients. It has a valuable library and museum. Several detached buildings, for the use of the artillery, have also been raised on different parts of the common; among which is a veterinary hospital for the horse brigade, with stalls for 66 sick horses. A division of the royal marines have also barracks and a hospital at Woolwich.

Perhaps, however, the most interesting establishment at Woolwich is the repository, on the S.W. side of the barrack-field, for the reception of models of different fortified places, ships, warlike instruments and machines of all kinds, trophies taken in war, &c. The collection, which is alike extensive and valuable, is partly contained in the rounda, a circular apartment 115 feet in diameter, originally erected by George IV., in Carlton gardens, for the entertainment of the allied sovereigns when on a visit to this country in 1814. Near the repository has lately been erected an observatory for the use of the officers, containing a telescope and other philosophical instruments, and a museum.

The parish of Woolwich is governed, under a local act, by 30 commissioners, chosen by the parishioners, besides the rector and churchwardens. The reform act constituted Woolwich a portion of the parliamentary borough of Greenwich (which see). Petty sessions are held here by the county magistrates on Mondays and Fridays, and a court of requests for the adjudication of claims under £5 every alternate Friday. Market days, Wednesdays, Fridays, and Saturdays. (*Parl. Rep. and Private Information, obtained from the best sources.*)

WOONSOCKET FALLS, p. v., Cumberland t., Providence co., R. I., 15 m. N.N.W. Providence, 414 W. Situated on the falls of Blackstone river where it descends over a precipice of rocks by two falls, one of 16 and the other of 14 feet, making 30 feet in the whole. The village is partly in Smithfield, where it is called *Bernon*. On the Cumberland side it contains four churches, a Baptist, Methodist, Congregational, and Universalist, a bank, 100 stores, 16 cotton and two satinnet factories with 50,826 spindles, 1268 looms, the whole employing 1162 hands, producing 9,739,717 yards of cloth, of which 5,645,000 were cotton prints, 3,117,000 cotton sheeting, 156,000 sateen, 364,000 jean, 62,400 negro cloth, 548,000 flannel. It has about 2500 inhabitants. *Bernon* has an Episcopal church, two cotton factories with 8000 spindles, and about 500 inhabitants. The Blackstone canal passes through the village.

WOOSTER, p. t., capital of Wayne co., O., 51 m. S. by W. Cleveland, 93 m. N.E. by N. Columbus, 344 W. The village is situated near the junction of Killbuck and Apple

## WOOTTON BASSETT.

creeks, and contains a courthouse, jail, county offices, a bank, a U. States land-office, five churches, a Presbyterian, Covenanters, Methodist, Baptist, and Dutch Reformed, 25 stores, two printing-offices; one academy, 25 students; two schools, 64 scholars; 150 dwellings, and 1913 inhabitants. The t. contains 29 stores, eight flouring-mills, one grist-mill, 11 saw-mills, one oil-mill, seven tanneries, one distillery, two printing-offices, two weekly newspapers; and, exclusive of the village, 1207 inhabitants.

WOOTTON BASSETT, a mun. bor., market-town, and par. of England, co. Wilts, hund. Kingsbridge, 78 m. W. London. Area of the par., 4380 acres. Pop. of do., in 1831, 1896. The town, which stands on a hill, consists almost wholly of one street, about  $\frac{1}{2}$  m. in length, and tolerably well built, in the centre of which is the town-hall. The parish church is an old building, in the mixed style; the living, a vicarage worth £461 a year, is in the gift of the earl of Clarendon. It has, also, a chapel for Independents; a free school, founded in 1688, affording instruction to about 20 children; with charity and Sunday schools. It has no manufactures of any kind; and would hardly, indeed, have been worth notice, but for the circumstance of its having returned two members to the House of Commons from the 25th of Henry VI., down to the passing of the Reform Act, by which it was disfranchised. It was reckoned too inconsiderable to be included in the provisions of the Municipal Reform Act. (*Mun. Corp. Appendix; Private Information.*)

WOOTTON-UNDER-EDGE, a market town and par. of England, co. Gloucester, hund. Berkeley, on the declivity of a hill, as its name implies, 17 m. S. by W. Gloucester. Area of par., 4890 acres. Pop. of do., in 1831, 5452; of the town only, 5004. The latter, traversed by a small stream, on which are several cloth mills, consists principally of two well built parallel streets. The church, which is large and handsome, has some curious old monuments. The living, a vicarage, worth £112 a year, is in the gift of the dean and chapter of Oxford. The grammar school, founded in the 8th of Richard II., and revived in the time of James I., had, at the date of last inquiry, an income of £376 12s. a year; it supports 10 foundation scholars and is free to all other boys born in, or inhabiting Wotton and North Nibley. The boys are instructed in writing and accounts, and are "to use no language in the school but Latin." The Blue-coat school, established in 1693, has an income of £94 a year; the general hospital, for 12 almshouses, has a clear income of £346 a year; and Perry's hospital, also for 12 persons, an income of nearly £170 a year. The aggregate amount of the public endowments in the parish reached, at the period referred to above, £1130 a year. (*Digest of Charity Repts.*) Wotton-under-Edge is a borough by prescription, but has no extant charter: its corporation, consisting of a mayor and 12 aldermen, elected at an annual court-leet, has no municipal functions, revenues, or emoluments. The inhabitants of the town and surrounding district are chiefly occupied in the weaving of woollen cloth. In 1838, there were in the parish five woollen-mills, wrought principally by steam, employing, in all, 182 hands. (*Mills and Factories' Report*); besides which, there were many looms wrought by the weavers in their own houses. Petty sessions for the hund. are held in Wotton. Markets on Fridays; fairs, Sept. 25th, for cattle and cheese. (*Parl. Repts.*, &c.)

WORCESTER, an inland co. of England, having a very irregular outline and several detached portions, is bounded on the N. by the cos. of Salop and Stafford, W. by Hereford, S. by Gloucester, and E. by Warwick. Area, 462,720 acres, of which about 400,000 are supposed to be arable, meadow, and pasture. This is an extremely beautiful and well-watered county. It is traversed from N. to S. by the Severn, and in part, also, by its important tributaries the Avon from the E., and the Teme from the W. Surface finely diversified: the Malvern hills divide the S.W. part of the county from Herefordshire; the Bredon hills, to the S. of Pershore, have an elevation of nearly 900 feet; and there are some considerable hills on its N. frontier between Hales-Owen and Bromsgrove. The vales of Worcester and Evesham, or rather of the Severn and Avon, are alike beautiful and fertile; but the soil in other parts, especially on the E. side of the county, is cold and poor. Besides corn, cattle, and dairy produce, Worcester produces large quantities of fine wool, apples, hops, and excellent cider. We are sorry, however, to have to state that agriculture is by no means in an advanced state. "The system followed is, in itself, a bad one, and is carelessly and negligently conducted. There is no rotation as to cropping; nor are any pains taken to relieve the ground from water, though it be in many places very wet. Ploughing is badly performed, and the whole management of a slovenly description." (*Kennedy and Grainger, on the Tenancy of Land*, i. 353.) In 1838 there were in this county, 1632 acres under hops. Estates of all sizes; farms for the most part

## WORCESTER.

small. Average rent of land, in 1810, 22s. 4d. an acre. Coal is found in the N. parts of the county, and the brine springs of Droitwich furnish immense quantities of salt.

The city of Worcester is the principal seat of the leather glove manufacture; the iron, hardware, and glass manufactures are carried on with spirit and success at Dudley; Kidderminster is famous for its carpets; and needles and fish-hooks are made to a greater extent at Redditch and Peckenheim, in this county, than anywhere else in England or, indeed, in the world.

Worcestershire is divided into five hundreds, and 171 parishes. It sends 12 members to the House of Commons, viz., four for the county, two each for the city of Worcester and the borough of Evesham, and one each for the boroughs of Kidderminster, Bewdley, Droitwich, and Dudley. Registered electors for the county, in 1839-40, 10,917, whereof 6328 were for the E., and 4589 for the W. division of the county. In 1841, Worcester had 46,962 inhabited houses, and 233,484 inhabitants, of whom 114,753 were males, and 118,731 females. Sum expended on the relief of the poor in 1838-39, £62,168. Total annual value of real property in the county assessed to poor-rates, in 1840-41, £995,242.

WORCESTER, a city, parl. and mun. bor. of England, locally situated in the county of Worcester, of which it is the cap., but forming a county of itself; hund. Oswaldslow, on the Severn, crossed here by a handsome stone bridge of five arches, 25 m. S.W. Birmingham, and 100 m. W.N.W. London; lat. 52° 9' 30" N., long. 2° 9' 15" W. The city and old municipal borough, comprising 220 acres, constitute about 1-4th part of the modern parliamentary and municipal borough, which had, in 1831, a population of 26,805; but the population of the modern parliamentary borough in 1841, has not yet been stated.

Worcester is finely situated on the E. bank of the river, in a fertile and beautiful country; and is one of the best built, handsomest towns in the kingdom, having every appearance of wealth and respectability. "The main streets are wide, well paved, and lighted with gas; the central street, which traverses the city from N. to S., is of considerable length, and kept particularly clean and neat. A considerable extent of ground comprised in the suburbs is unoccupied by houses, and consists principally of gardens and meadows. It is probable, however, that a great portion of it will, in process of time, form the site of new buildings. On the E. side of the canal the number of houses is rapidly increasing; and it appears probable, that the area included within the new boundary to the N., will be gradually filled up by villa residences. To the N., both within and beyond the boundary of the Tything, the building of streets, and rows of dwelling houses, as well as of detached residences of a very superior class, is going on rapidly." (*Parliamentary Boundary Report*.) Of the public buildings, the principal is the cathedral, originally founded in 1084, but not completed till 1374. It stands towards the S. extremity of the town, and its appearance has recently been greatly improved by taking down the ancient church of St. Michael, a most ungainly edifice, which stood close to the N.E. extremity of the cathedral, and greatly marred the prospect. Its exterior is extremely plain, and its attractions consist principally in its size and the lightness of its architecture. The central tower, though the stone be much decayed, is extremely fine. It is built in the form of a double cross; its external length, including buttresses, is 426 feet, and the internal 394 feet; the nave, from the front to the W. transept is 180 feet in length; the tower, which is about 200 feet in height, is ornamented with light and elegant pinnacles. The general character of the building is early English; there are, however, some earlier parts. A crypt, part of the nave, the chapter-house, &c., are Norman; parts of the nave and aisles are decorated; the cloisters, and a fine S. porch are perpendicular. The interior is very spacious, mostly in the early English style, with elegant details, and good groining. Across the S.E. transept is the monumental chapel of Prince Arthur, son of Henry VII., and in the middle of the choir is the tomb of King John, the top stage of which, with the effigy, is evidently of a date soon after his decease. (*Rickman*, 260.) There are several fine ancient monuments in different parts of the church, including that of the celebrated Judge Littleton, one of the founders of the English law, a justice of the common pleas, under Edward IV., who died in 1481. Among the more modern monuments is that of the celebrated scholar Sillinglefleet, author of the *Origines Sacrae*, and other valuable works, bishop of the see from 1689 till his death in 1699, with an extravagantly eulogistic inscription written by the famous Dr. Bentley. Adjoining the S. side of the cloister is the ancient refectory of the monastery attached to the cathedral, a lofty and spacious hall, 120 feet in length, by 38 feet in width, now occupied as the king's school. On the E. side of the cloisters is the chapter-house, the library belonging to which comprises a valuable collection of books and manuscripts, chiefly relating to theology

## WORCESTER.

and common law. The nett revenue of the bishopric amounted, at an average of the three years ending with 1831, to £6569 a year. The chapter, previously to 1836, consisted of a dean, 10 prebendaries, and eight minor canons. The canons or prebendaries were then reduced to eight, including the dean, and their emoluments were also considerably reduced. The income of the establishment averages about £12,000 a year. The bishop's palace, on the bank of the river, is an incongruous but commodious edifice formerly surrounded with walls. It has lately been arranged that the episcopal palace shall in future be the deanery; and the bishop is to reside at his house at Hartlebury, 10 m. distant. An ancient gateway, called Edgar's Tower, leads into the precincts of the cathedral. There are remains of several monastic establishments, including a commandery of the hospital of St. John, in different parts of the city; and it had formerly a castle, every trace of which has been obliterated, excepting the mound on which the keep stood. Several of the parish churches deserve notice: that of St. Andrews has a square tower, 90 feet in height, surmounted by an octagonal spire 155 feet 6 inches in height, making the total elevation of the latter 245 feet 6 inches. The church and tower are very ancient; but the spire is comparatively modern, having been added in 1751. All the livings in the city, except that of St. Peter, are rectories; and, except All Saints (which is in the gift of the crown), they are all in the patronage of the dean and chapter. The most valuable are St. Martin's, worth £378; St. Nicholas, worth £260; and St. Peter's, worth £233 a year. Exclusive of its numerous churches, Worcester has chapels for Roman Catholics, Independents, Calvinists, Wesleyans, Friends, &c. The guild-hall, a large brick edifice, constructed in 1723, the front of which is ornamented with columns, statues, &c., has a hall for the accommodation of the courts of assize, a council chamber, &c. The old county jail and house of correction was defective in its plan and accommodation; but a new jail at the top of Foregate-street was built on Howard's plan, in 1824. The old city jail, in Friar-street, was formerly a Franciscan convent. The market-house, in the High-street, is a spacious and convenient building; and the public subscription library, in Foregate-street, contains reading and news rooms, and a considerable collection of books. Here is also a small theatre, built in 1780.

The royal grammar school attached to the cathedral was founded in the reign of Henry VIII., for 40 scholars, who are prepared for the universities, and instructed besides in various subordinate departments of knowledge. It has two exhibitions to Balliol college, Oxford. The free grammar school, founded by Queen Elizabeth, in 1561, for 12 boys, has 14 exhibitions to the universities, of £30 each, and scholarships at Worcester college, Magdalen-hall, Oxford. The great Lord Somers and Samuel Butler, author of *Hudibras*, were educated in this school. Here also are subscription schools on the Madras and Lancasterian plans, with several other schools for children of both sexes. The whole number of children at school may be estimated at about 3000. A diocesan board of education for superintending all the schools in connexion with the church in the diocese has recently been established. It has various almshouses, the oldest of which appears to be those of St. Oswald's hospital, founded in 1268; a city and county infirmary, erected in 1770; a lying-in institution, house of industry, female penitentiary, dispensary, &c. Several medical and other societies have been formed: a music meeting is held every third year in the hall of the king's school, the meetings in the intervening years being at Gloucester and Hereford; the proceeds are appropriated to the relief of widows and orphans of the clergy. Races take place in July and November.

Worcester had formerly a considerable manufacture of woollen goods; but this has been discontinued, and the chief business of the city consists at present (1842) of the manufacture of gloves and china and fine earthenware. The produce of the glove manufacture was 10 years ago estimated at about 50,000 dozen pairs oil-leather or beaver gloves, and from 450,000 to 500,000 dozen pairs kid and lamb skin gloves. This trade has, however, greatly fallen off. In May, 1842, there were only 28 glove manufactures, whereas, in 1826, there were 140; and the total annual produce does not at present (1842) exceed 5000 dozen pairs beaver or oil-leather gloves, and 250,000 dozen pairs kid and all other kinds, including 80,000 dozen pairs thread gloves. China ware is produced here on a very extensive scale; and it is not too much to affirm that it is equal, both as respects quality and beauty of design, to any made anywhere else in the kingdom. The materials used in the manufacture are mostly brought from Cornwall. The other principal products are lace, spirits, tanned leather, nails, and turnery ware, &c. There are some large iron foundries on the canal and river banks. The inland trade is carried on by means of the Worcester and Birmingham canal and

the Birmingham and Gloucester railway, the nearest station of which is at Spitchley, 3 m. from the city. The canal communicates with the Severn, which is here navigable for large barges; and its banks have been furnished with good quays and spacious warehouses. After several frustrated attempts on the part of joint stock companies to procure an act for improving the navigation of the river, a bill for that purpose received the royal assent in May, 1842. It places the management of the contemplated improvement in the hands of public commissioners, who are to be elected annually by the cities, towns, and land owners along the banks of the river, within the distance which is intended to be improved. A continuous depth of 8 feet water is expected to be obtained from the entrance of the Berkeley canal at Gloucester to Worcester; and from thence a depth of 6 feet to the entrance of the Staffordshire and Worcestershire canal at Stourport. The whole extent of the river to be improved is nearly 40 m. Mr. Cubitt, the engineer, has drawn up the plan adopted for the improvement. Its leading features are a succession of solid weirs built obliquely, instead of in the usual way, at right angles, across the stream, with side cuts or locks. Ascending the river, the first weir is placed a little below the city of Worcester. The channel is left clear to that point. The fall in this portion of the river being very gradual; it is proposed to cut out the shallows, and keep them clear by dredging. The greatly higher scale of gradients in the inclination of the river above Worcester rendered the employment of weirs and locks inevitable. The hop plantations of Worcestershire extend over about 1832 acres, and most part of the produce is brought hither for sale. The society of Worcester is extremely good, it being the residence of many respectable families, attracted hither by the beauty of the situation, cheapness of living, facilities of education, and the variety of amusements furnished by its theatre, assemblies, concerts, clubs, races, &c. It publishes four weekly newspapers, and has a savings' bank and four other banks, three of which are native establishments, and the fourth a branch of a metropolitan joint stock bank. In the year ending the 12th of June, 1841, there were sold in the Worcester corn-market 49,562 qrs. wheat, 13,266 do. barley, 1274 do. oats, 4912 do. beans, 912 do. peas, and 25 do. rye.

Worcester was chartered in the 1st of Richard I.; but the charter was not confirmed until the 2d of Henry III. Various other charters, &c., were afterward granted by different sovereigns; but that by which the city was governed previously to the Reform Act dated from the 19th of James I. It erected the city and liberties of Worcester into a county separate from, and independent of, the county of Worcester. Under the Municipal Reform Act, the city is governed by a mayor, 11 other aldermen, and 36 councillors. Corporation revenue in 1840, £5300. It has a commission of the peace, with jurisdiction in nearly all felonies, excepting such as affect life and limb. A sheriff's court is held once a month by the under-sheriff; and a court of common pleas, and petty sessions weekly, besides several inferior courts. The assizes for the county are also held here. A police force has been organized, and the peace of the town is well maintained. Worcester has returned two members to the House of Commons since the 23d of Edward I.: the right of voting previously to the Reform Act having been vested in the freemen. Registered electors in 1840-41, 3037. It is also the seat of election and principal polling-place for the W. division of the county.

Worcester is of great, but uncertain, antiquity. It is principally celebrated in history from its giving name to the decisive victory obtained here by Cromwell over the forces of Charles II., on the 3d of September, 1651. Among other eminent individuals, Worcester gave birth to the distinguished statesman, Lord Somers, born here in 1652. Markets, Wednesday and Saturday. Fairs, eleven times a year, mostly for cattle, lambs, horses, linen, hops, cheese, &c. (*Parl. Bound. and Mun. Reps.; Rees's Cyclopædia; Priv. Information.*)

WORCESTER, county, Mass.: Situated in the central part of the state, and contains 1500 sq. m., being the largest county in the state, extending quite across it, from N. to S. Watered by Blackstone, Quinebang, Nashua, Ware, Millers, and Mill rivers. The Blackstone canal extends through its S. part, from Worcester to Providence; the railroad from Boston through Springfield to Albany passes through it from E. to W., and at Worcester is met by the Norwich and Worcester railroad. It contained in 1840, 67,666 neat cattle, 26,128 sheep, 26,272 swine; and produced 45,759 bushels of wheat, 84,914 of rye, 372,591 of Indian corn, 13,871 of buckwheat, 54,254 of barley, 375,471 of oats, 1,146,092 of potatoes, 15,000 pounds of tobacco. It had 299 stores, four furnaces, one forge, 74 filling mills, 42 woollen factories, 71 cotton factories with 137,358 spindles, six flouring mills, 144 grist-mills, 320 saw-mills, 15 paper-mills, two powder-mills, 58 tanneries, one distillery, one brewery, 10 printing-offices, six weekly newspapers and one periodical;

## WORCESTER.

23 academies, 1242 students; 549 schools, 24,496 scholars. Pop. 95,313. Capital, Worcester.

WORCESTER, county, Md. Situated in the S.E. part of the state, and contains 700 sq. m. Bounded S.E. by the Atlantic, W. by Chesapeake bay. Drained by Potomack river and its branches. Several islands extend along its coast, and enclose Sinepuxent bay. It contained in 1840, 14,765 neat cattle, 14,924 sheep, 19,900 swine; and produced 20,679 bushels of wheat, 487,442 of Indian corn, 161,732 of oats, 35,441 of potatoes. It had 45 stores, 24 grist-mills, 15 saw-mills, five tanneries; four academies, 212 students; 24 schools, 600 scholars. Pop.: whites, 11,765; slaves, 3539; free coloured, 3073; total, 18,377. Capital, Snow Hill.

WORCESTER, p. t., capital of Worcester co., Mass., 39 m. N.N.W. Providence, 42 m. W. by S. Boston, 524 W. It is in 46° 16' 13" N. lat., and 71° 48' 10" W. long. -Pop. in 1830, 4172; in 1840, 7497. Incorporated in 1684, but not organized until 1722. Watered by Blackstone river and its branches, which afford water-power. The village is one of the finest in New-England, and among the finest inland places in the United States. The houses, which are mostly of brick, and many of them elegant, are built on many streets. Main-street is a broad and handsome street, over a mile in length, crossed by other streets, generally at right angles. It contains a courthouse, jail, four banks, the hall of the American Antiquarian society, the state lunatic asylum, and 11 churches, three Congregational, a Unitarian, a Methodist, two Baptist, Episcopal, Friends, a Universalist, and a Roman Catholic. There is a manual labour high school, and the Roman Catholic college of the holy cross. A new and splendid courthouse is in the process of erection.

The hall of the Antiquarian society has a central building 46 feet long and 36 feet wide, with a neat Doric portico; and has two wings 25 feet long and 21 feet wide. It has a library of 19,000 volumes, containing many rare and valuable works relating to American history, and interesting specimens of early printing, nearly half of them a donation from Isaiah Thomas, Esq., its first president, and author of the "History of Printing." The lunatic asylum consists of a centre building 76 feet long and 40 feet wide, four stories high, with two wings each 90 feet long and 36 feet wide, and three stories high. At each end of the wings are two other buildings, 134 feet long and 34 feet wide, forming, with the main building, three sides of a spacious square, all built of brick. The interior arrangements are admirably fitted for the accommodation of the different classes of patients; and, on the whole, it is one of the best institutions of the kind in the country. Worcester enjoys great facilities for trade. It is surrounded by a fertile and highly cultivated country. The Blackstone canal extends alternately on both sides of Blackstone river, 45 m. to Providence, and cost \$750,000, more than half of which was contributed by citizens of Rhode Island. The Boston and Worcester railroad extends 44 m. to Boston, and cost \$1,500,000. It is extended westward through Springfield, and is continued to Albany. The part in Massachusetts cost \$3,000,000. The Norwich and Worcester railroad extends 58 m. to Norwich, Conn., and has been continued down Thames river to Gale's ferry, in Ledyard, whence the line is continued by steamboats to New-York city, and by a steam ferry-boat to the Long Island railroad at Greenport, and thence 96 m. to New-York. These several nodes of communication render Worcester one of the greatest thoroughfares in the country, facilitate its trade, and cannot fail to add to its growth and prosperity. In the t. there were, in 1840, 90 stores, with a capital of \$413,000; machinery was produced to the value of \$99,000; one furnace employed a capital of \$20,000; granite and marble were produced to the amount of \$12,000; lumber was produced to the value of \$8000; bricks and lime to the amount of \$3600; one cotton factory, with 1672 spindles, employing 30 persons, produced to the amount of \$26,000, with a capital of \$20,000; one woollen factory produced to the amount of \$75,000, with a capital of \$40,000; 28 persons produced hats and caps to the amount of \$28,000, and straw bonnets to the amount of \$11,000, with a capital of \$18,000; manufactures of leather, as saddlery, &c., produced to the amount of \$35,800, with a capital of \$18,000; two persons produced 8000 pounds of soap and 1000 pounds of tallow candles, with a capital of \$3000; two paper-mills, employing 14 persons, produced to the amount of \$30,000, with a capital of \$14,000; 30 persons produced carriages and wagons to the amount of \$20,000, with a capital of \$8000; 12 persons manufactured furniture to the amount of \$30,000, with a capital of \$15,000. There were two grist-mills, two saw-mills, four printing-offices, two binderies, four weekly newspapers and one periodical, 15 brick or stone and 10 wooden houses were built. The total amount of capital employed in manufactures was \$200,000. There were three academies, 120 students; 30 schools, 1488 scholars.

WORCESTER, p. t., Otsego co., N. Y., 57 m. S.W. Albany, 371 W. Drained by Charlotte river and its tributaries. It

## WORMS.

contains two churches, six stores, two fulling-mills, four grist-mills, 16 saw-mills; 10 schools, 580 scholars. Pop. 2390.

WORKINGTON, a market town, par., and seaport of England, co. Cumberland, ward Allerdale, on the Derwent, near its mouth, 7 m. N. by E. Whitehaven. Area of parish, 7730 acres. Pop. of parish in 1831, 7196, of whom about 6400 inhabited Workington township. The streets are mostly narrow and inconvenient; but of late years many good houses have been erected. In the upper town a new square has been built, in which the corn-market is held. It has a small neat theatre, assembly and news rooms, and various other public buildings. The Derwent is crossed here by a stone bridge, of three arches. The parish church, rebuilt in 1760, has a fine altar-piece: the living is in the gift of — Curwen, Esq., whose mansion, Workington-hall, a fine castellated structure, on a richly-wooded height, overlooks the town. A chapel-of-ease, in the Tuscan style, was built in 1823; and here, also, are chapels for Independents, Methodists, Presbyterians, Roman Catholics, &c. A grammar school, founded in 1664 by Sir P. Curwen, has since ceased to exist; the founder having had only a life interest in the property with which it was endowed. There are, however, Lancastrian and female schools, a dispensary, and various institutions for the benefit of the poor, supported by subscription. Workington has manufactures of salicloth and cordage, and a valuable salmon fishery on the Derwent, the property of the earl of Lonsdale; but it derives its principal importance from the extensive collieries in its vicinity, belonging to the Curwen family, which furnish considerable quantities for shipment to Ireland, the Isle of Man, &c.

Workington harbour is protected by a breakwater, and has good quays; but it nearly dries at low water. It is a creek of the port of Whitehaven; but in 1842 it had 46 ships of the burden of 6715 tons. A little business is carried on here in ship-building, and in the importation of timber and other articles. Markets, Wednesday and Saturday; fairs, May 18th and October 18th. Races are held here annually in August.

WORKSOP, a market town and par. of England, co. Nottingham, wapent. Bassetlaw, on the Rytou, a tributary of the Idle, 23 m. N. Nottingham. Area of par., 13,220 acres. Pop. in 1831, 5566. The town, consisting chiefly of one street, crossed by two others, is well built, paved, and lighted. Its church, which formerly belonged to an Augustine priory, is a fine old edifice, with two lofty towers, and has within several ancient monuments. The living, a vicarage worth £388 a year clear, is in the gift of the duke of Norfolk. Here, also, are places of worship for various sects, a national school, and some small endowments for parochial and charitable purposes. The town is celebrated for its malt, and was formerly, also, celebrated for its liquors, of which large quantities were raised in the adjoining district; latterly, however, its culture has been wholly abandoned.

Worksop may be regarded as the capital of the district popularly called the "dukery," from its containing Worksop-manoor, formerly a seat of the duke of Norfolk, Clumber-park, the seat of the duke of Newcastle, and Welbeck abbey, the seat of the duke of Portland. These are all magnificent residences in fine parks. Recently, however, the duke of Newcastle has purchased Worksop-manoor; and the house, which had been rebuilt in 1763, either has been, or is to be immediately, pulled down. Clumber-park, now about 11 m. in circumference, and finely laid out and wooded, was, so late as the era of the American war, little better than a black heath, interspersed with bogs and marshes! In this district, also, is Thoresby, the seat of Earl Manvers. Markets on Wednesday. Fairs, March 31st and June 21st, for cattle and sheep; October 14th, for horses and cattle; and, about three weeks after the last, a statute fair. (*Beauties of England and Wales, art. Nottingham; and Private Information.*)

WORMS (an. *Borbetomagus*), a city of W. Germany, grand duchy of Hesse Darmstadt, prov. Lower Hesse, cap. cant., on the W. bank of the Rhine, near the border of Rhenish Bavaria, and 26 m. S.S.E. Mentz. Pop. about 8500. (*Berghaus*.) It was formerly an important free city of the empire, but is now much decayed, and is surrounded by dismantled and ruined walls. "Its interior," says Mr. Chambers, "consists of a single good street, lined with tall mansions, inhabited by persons of an inferior order, and a number of back lanes and detached buildings, many of them vacant and desolate. In a piece of open ground behind the main street, stands the cathedral, a building of red sandstone, its foundation dating as far back as the beginning of the 11th century (*Schreiber, Guide du Rhin* says the 8th). The original part of this edifice is Gothic, but the larger portion is, in the Byzantine style; the interior arches being all rounded, and the pinnacles and dome fretted in the Moorish taste. The building contains a number of excellent pieces of sculpture, and the high altar at the E. end is

## WORTHING.

environed with ancient carvings, in oak." (*Tour on the Rhine*, 60.) This cathedral has two choirs, each surmounted by a cupola, one of which rises 137 feet (*Schreiber*) above the pavement. The W. choir is a good specimen of the architecture of the 12th century, and has a magnificent rose-window of that period. The Lutheran church in the market-place, in which is a painting of Luther before the diet of Worms, in 1521, occupies the site of the council-hall, in which that event took place. This hall was destroyed when the city was bombarded by the French, in 1689; at which time, also, a vast number of houses were destroyed. From this period, in fact, the decay of Worms may be dated; many of the inhabitants having afterward settled in other German towns, and in Holland. Some of the other churches deserve notice; and there are two synagogues. Charlemagne was married at Worms; and it was frequently inhabited, both before and after his time, by the Frankish sovereigns; but no remains of the imperial palace exist, except a few fragments of a wall, forming part of the *Bürgerhop*, a prison, and police-office. Worms is the seat of a consistory, about half its inhabitants being Protestants; and it has several convents and hospitals, a gymnasium, and elementary schools, supported by different religious sects. It has manufactures of tobacco, sealing-wax, hats, &c.; but its principal trade is in wine, and other agricultural produce. The vicinity of Worms, celebrated by the ancient Minnesingers as the *Wonnegau*, or "land of joy," is in great measure covered with vineyards, producing some of the best growths of the Rhine. The famous *Liebfrauenmilch* is grown around the church of Notre Dame, close to the city. Worms is supposed to owe its origin to a fort erected here by Drusus: many Roman antiquities have been discovered in and near it. Among the councils held at Worms, that in 1122 was the most famous. Diets were also held here in 1492, 1517, and 1521. The latter is famous from the fact of Luther having, as already stated, appeared before it, to explain and answer for his opinions. On appearing before the diet, he displayed equal firmness and moderation. An edict was, however, issued against him on the 26th of April, by which he was excommunicated as an obstinate heretic. But previously to this, in consequence of the determination of the emperor and the other princes who had given him a safe-conduct, not to forfeit their word, he was allowed to withdraw from the city in safety. (*Schreiber*; *Berghaus*; *Robertson's Charles V.*, book ii.)

WORTHING, a maritime town and fashionable watering-place of England, on the English channel, co. Sussex, rape Bramber, hund. Brightford, in the par. of Broadwater, a village about a mile to the N., 49 m. S. by W. London, and 10 m. W. Brighton. Area of par., 3240 acres. Pop. of do. in 1831, 4576, of whom nearly 4000 were supposed to belong to the town. Until within the last 50 or 60 years, Worthing was only an inconsiderable fishing village; and is much indebted for its increase and celebrity to the visits of the royal family during the latter part of last century. The buildings of the town extend along the coast for about three quarters of a mile, and the main street runs for somewhat more than half a mile in a N. direction. Excepting in its centre, the houses are mostly arranged in regular terraces, though many are isolated and interspersed with fields and gardens. The ranges of building fronting the sea are generally faced with cream-coloured brick made from a peculiar clay found in the vicinity, and the town is well paved, lighted, and has an ample supply of water. The chapel-of-ease, erected in 1812, at a cost of £12,000, is a very neat edifice, with a Doric portico. The living, a curacy worth £150 a year, is in the gift of the rector of Broadwater. Here, also, are chapels for Independents and Wesleyans, to which Sunday schools are attached; with well attended national schools for both sexes, supported by subscription; a savings' bank, and a small, but elegant, theatre, opened in 1807. The market place consists of ranges of covered stalls built around a square area. The Esplanade, a raised causeway, extends along the shore for the whole length of the town; near its W. extremity are the Royal baths, comprising two complete suites of apartments. The New Parisian baths, recently built, adjoin the Sea House hotel. It is almost superfluous to add, that it has numerous hotels, with assembly-rooms; libraries, reading and news rooms, convenient bathing machines; and the other accommodations incident to a well-attended watering-place. Fine sands extend along the coast for 7 m. to the W., and 3 m. to the E. of the town. These, with the gradually increasing depth of the water, which gives the opportunity of bathing at any time of the tide, added to the mildness of the climate, in consequence of the shelter afforded on the N. and E. by the South Downs, render Worthing especially suitable as a place of resort for invalids. No manufacture of any kind is carried on; but the mackerel and herring fisheries are usually very productive, and contribute largely to the supply of the London markets. An annual fair is held on the 20th of July; market day, Saturday and every alternate Wed-

## WURZBURG.

nesday, for corn. (*Guide to Watering-places of England*; *Priv. Inf.*)

WORTHINGTON, p. t., Hampshire co., Mass., 17 m. W.N.W. Northampton, 112 m. W. Boston, 395 W. Drained by Westfield river. Incorporated in 1763. It contains two churches, a Congregational and a Methodist, seven stores, one fulling-mill, three grist-mills, seven saw-mills, two tanneries; one academy, 135 students; 11 schools, 429 scholars. Pop. 1197.

WRENTHAM, p. t., Norfolk co., Mass., 32 m. S.S.W. Boston, 418 W. Drained by branches of Charles, Taunton, and Neponset rivers. It contains three churches, a Congregational, Baptist, and Universalist, six stores, four cotton factories with 3500 spindles, three grist-mills, 10 saw-mills; one academy, 150 students; 18 schools, 767 scholars. Pop. 2915.

WREXHAM, a parl. bor., market town, and par. of Wales, co. Denbigh, hund. Bromfield, on the high road between Shrewsbury and Chester, 11 m. S. by W. the latter. The parish of Wrexham includes no fewer than 12 townships, two only of which, and a small detached portion of a third, are included in the parliamentary borough, which has an area of about 1145 acres, and had, in 1831, a population of 5484.

Wrexham is a handsome and lively town, with spacious streets crossing each other at right angles, and neatly and substantially built houses; it is also well paved, lighted with gas, and plentifully supplied with water. The church, dedicated to St. Giles, a large and venerable structure, is deservedly regarded as one of the principal ecclesiastical edifices in the principality. It was erected about 1472, on the site of a more ancient structure: it is in the perpendicular style, and is covered with grotesque sculpture; but in correctness of design and proportion it is surpassed by few buildings of the same date. It consists of a nave, with side aisles and a chancel, the whole length being 178 feet, and the breadth 72 feet; the aisles are separated from the nave by clustered columns supporting pointed arches; and the ceiling is of oak, in imitation of groined stone. The tower, which was not completed till about 1506, is 135 feet in height: it consists of several successive stages pannelled throughout, and decorated with numerous statues of saints placed in niches of the buttresses; which latter are surmounted by four light open-work turrets rising 24 feet above the balustrade that surrounds the summit of the tower. It has a fine altar-piece, and some interesting monuments; among which are two to members of the Middleton family, admirably sculptured by Roubiliac. The living, a valuable rectory, worth £746 a year, is in the gift of the bishop of St. Asaph. It has also a Roman Catholic chapel, and four places of worship for Protestant dissenters; a house of correction for the county, with seven wards; a free endowed grammar school; two parochial national schools; a public library; reading, news, and lecture rooms; agricultural and horticultural societies; a neat theatre; and a property, yielding £230 a year, for distribution among the poor, and other charitable purposes. The town-hall, at the head of High-street, has a large room used for public meetings. Annual races take place in October. The town is under the jurisdiction of the county magistrates, who here hold monthly petty sessions for the hundreds of Bromfield and Gale. The Reform Act conferred on Wrexham the privilege of voting in the return of a member to the House of Commons, along with the boroughs of Denbigh, Holt, and Ruthlin. Registered electors for Wrexham in 1839-40, 359; do. for the entire boroughs, 941. It is one of the polling-places for the county. No particular branch of trade or manufacture is now carried on here; though Leland describes it, some centuries since, as containing "sum merchautes and good brokeler (buckler) makers." It owes its present degree of activity principally to its situation on the main road from North Wales through Chester to Liverpool. Coal, iron, and lead mines are extensively wrought in the parish, which has also some large iron-works. Exclusive of several of minor importance, a large fair, which continues for 14 days from the 23d of March, and is attended by traders from a great way round, is held here annually, for the sale of horses, cattle, Manchester, Birmingham, and Sheffield goods, Irish linens, Welch flannels, Yorkshire and other woollen cloths, &c. Five large areas in the town are fitted up with booths and temporary shops, for the accommodation of the dealers in the fair. Market-days, Monday and Thursday. (*Nicholson's Cambrian Guide*; *Panorama of N. Wales*; *Bound. Rep.*, &c.)

WURZBURG, a city of Bavaria, circ. Lower Franconia, of which it is the cap. on the Mayn, by which it is divided into two parts, 62 m. S.E. by E. Frankfurt, lat. 49° 47' 48" N., long. 7° 35' 0" E. Pop., exclusive of students and troops, about 22,500. Würzburg is finely situated, in a hollow surrounded by vine-covered hills, and traversed by the Mayn, here a large and fine stream, covered with boats and barges. The greater part of the city is on the right or N.

## WYALUSING.

bank of the river, the communication with the citadel, and a suburb on the opposite bank, being kept up by means of a handsome bridge. Würzburg is inclosed by walls, and, being one of the oldest towns of Germany, is irregularly laid out, its streets being generally narrow and angular; it has, however, some venerable edifices. The cathedral was originally founded in the 8th century, but the earliest portions of the present building appear to date from the 11th or 12th. The interior has been modernized with little taste; but it has some monuments worth notice, including those of a long series of the prince-bishops of Würzburg, the sovereigns of the city and adjacent territory, for upwards of 1000 years. There are 32 other churches, the finest of which is the Marienkirche, in the pointed Gothic style. The royal, formerly the episcopal, residence, in a small square, was erected early in the last century; it is of an oblong form, on the plan of the palace at Versailles, and is of great extent, including, besides a magnificent staircase, upwards of 280 apartments, mostly fitted up in the style of Louis XIV. The gardens attached to it form a favourite promenade. The great hospital is an extensive and well conducted establishment, partly subsidiary to the school of medicine, for which the university of Würzburg is famous. This university was founded in 1403, and revived in 1522; at different periods it has been in a very flourishing state. It has some good scientific collections, and a library of 120,000 volumes. In 1832, it had 521 students, of whom 244 attended the medical classes, 109 the law, 118 the divinity, and 50 the philosophical, &c. (*Journ. of Education*); but the number of students has since declined, and probably does not at present (1842) amount to 400. It has, also, a gymnasium, a teachers' seminary, musical and polytechnic institutions, a society of arts and sciences, and an infirmary for the cure of deformities. Only three or four of the numerous monastic institutions formerly established in the city now exist. Würzburg is the seat of the court of appeal for the circle, and a bishop's see. Its manufactures consist principally of woollen stuffs, hats, leather, sealing-wax, and surgical instruments. It is the principal depot for Franconian wines, which are mostly sent down the Main to Frankfurt; and its trade will most probably be materially increased by the opening of the canal from Bamberg on the Main to Dietfurt on the Altmühl, an affluent of the Danube. Würzburg was secularized and given to the Archduke Ferdinand of Austria in 1803, and was ceded to Bavaria in 1815. (*Berghaus; Diet. Geog., &c.*)

WYALUSING, p. t., Bradford co., Pa., 149 m. N. Harrisburg, 259 W. Drained by Wyalusing creek and its tributaries, flowing into Susquehanna river. It has seven stores, one fulling mill, one woollen factory, four grist-mills, 12 saw-mills; six schools, 318 scholars. Pop. 1400.

WYCOMBE (CHIPPING, or HIGH), a parl. and mun. bor., market town, and par. of England, co. Buckingham, hund. Desborough, on the Wick, a small tributary of the Thames, and on the high road from London to Oxford, 27 m. W.N.W. the former. The old parl. and mun. bor., which were co-extensive, did not include the whole of the town; but the modern mun. bor. is rather more than three times the size of the former, and the modern parl. bor. is identical with the par. The latter has an area of 6380 acres; with, in 1831, a population of 6299. Wycombe extends for 1½ m. along the valley in which it is situated; and, though it has increased but little of late years, its general appearance is that of a well-built, prosperous market town. The principal roads communicating with the country to the N.W. and S.E., diverge from the market place in the centre of the High-street. The church, a large and venerable structure in the perpendicular and early-decorated styles, has a tower at its W. end, 108 feet in height, erected in 1522; but the rest of the church dates chiefly from the latter part of the 13th century. The interior has a fine altar-piece, and several monuments, among which is one by Schemmachers, to the earl of Shelburne, father of the first marquis of Lansdowne, who died in 1761, and another by Carlini to a countess of Shelburne. The living, a vicarage worth £140 a year, is in the gift of the marquis of Lansdowne. The Independents, Baptists, and Friends, have places of worship here. The town-hall, erected in 1775, is a large and respectable brick building, supported on stone pillars. The free grammar school, founded by Queen Elizabeth, has attached to it some almshouses, and an income of about £300 year. Though established for an unlimited number of scholars, only 27 were receiving instruction at the date of the late inquiry. Here, also, is a girls' Lancastrian school, with numerous bequests for the general relief of the poor. The manufacture of chairs is the only one of any importance carried on in the town. Some years since a considerable quantity of pillow lace was produced here; but this branch of industry has been nearly superseded by the machine-made lace of Nottingham and other places. There are several con-

## WYTHE.

siderable paper-mills near the town, on the Wick, and others in different parts of the parish. But the prosperity of High Wycombe is mainly owing to its being a place of considerable thoroughfare, though, since the opening of the Great Western railway, that has materially diminished; and to its being the market town for a district of 10 m. round. It has an extensive corn-market.

The earliest extant charter dates from 1586. Under the Municipal Reform Act it is governed by four aldermen, and 12 councillors.

The borough has returned two members to the House of Commons since the 28th of Edward I. Previously to the Reform Act the right of election was vested in the mayor, aldermen, bailiffs, and burgesses, of whom there were usually about 180. As already seen, the limits of the modern parliamentary borough have been considerably enlarged. Registered electors, in 1839-40, 399. Waller, the poet, was member for this borough in 1625. A little S.W. from the town is Wycombe abbey, the seat of Lord Carrington, by whose ancestors it was purchased from the Lansdowne family. Market day, Friday; fair, Monday before Michaelmas. (*Man. Corp. and Bound. Rep., &c.*)

WYMONDHAM, or WYNDHAM, a market town and par. of England, co. Norfolk, hund. Forehoe, on a hill, 9 m. S.W. by W. Norwich. Area of par. 11,240 acres. Pop. of ditto, in 1831, 5485. The town, on the high-road from London to Norwich, has a market place with an ancient cross. The church, a venerable structure, in a mixed style, consists of a nave with aisles, a large W. tower, and another at the intersection of the nave with the transepts. Originally it formed a part of a monastery founded in the time of Henry I., to which the town appears to have owed its earliest importance. Within are many curious monuments, including that of the founder, William de Albini; a large carved font, &c. The living, a vicarage worth £515 a year, is in the gift of the bishop of Ely. Here, also, are chapels for Independents, Wesleyans, Baptists, Friends, &c. The grammar school, founded by Edward VI., has a total income of about £180 a year. It is governed by 12 trustees and 15 governors, and is free to all boys of the parish; but, in consequence of a pending chancery suit, it had no pupils at the date of last inquiry. It has two exhibitions at Cambridge, and a share of an exhibition for scholarships. A fuel allotment charity has an income of £86 15s. a year; and an endowment of £65 yearly is expended in payments to the vicar, to old unmarried women of the parish, and in the partial support of five schools. (*Digest of Charity Reps.*)

A national school affords instruction to about 100 boys and 70 girls: 200 children attend a Sunday school attached to the church, and about the same number frequent one attached to a dissenting chapel. It was estimated, in 1839, that about one sixth part of the population was supported by weaving, principally bombazines, crapes, and other Norwich goods. There were about 300 looms at work in the town; about one third for a resident manufacturer, one third for Norwich manufacturers, and the rest for various employers. The average wages of weavers at that period amounted to only about 7s. a week per loom, many of the weavers having only half-work; and few members of the weavers' families were brought up to assist, but sought rather for agricultural or other employment. (*Hand-loom Weavers' Reports*, ii., 328, 329.) A court leet is held annually, and a manorial court occasionally. A little to the N. of this town is Kimberley-hall, the seat of Lord Wodehouse, in an extensive and finely-wooded park. The Wyndham family, one of the most illustrious in the county of Norfolk, which derived its name from this town, has produced, among other eminent individuals, the distinguished parliamentary leaders, Sir William Wyndham of the reigns of George I. and II., and Mr. Wyndham, of that of George III. Markets at Wymondham, on Fridays; fairs for cattle, &c., Feb. 12th, May 16th, and Sept. 29th. (*Parl. Reps., &c.*)

WYOMING, county, N. Y. Situated toward the W. part of the state, and contains 500 sq. m. Taken from Genesee county in 1841. Drained by Susquehanna river and its branches. Capital, Warsaw.

WYOMING, county, Pa. Situated in the N.E. part of the state, and contains 480 sq. m. Drained by Susquehanna river and its branches. Taken from Luzerne county in 1841. Capital, Tunkhannock.

WYSOX, p. t., Bradford co., Pa., 136 m. N. Harrisburg, 246 W. Drained by Rumfeld and Wysox creeks. It has seven stores; one fulling-mill, one woollen factory, three grist-mills, 11 saw mills. Pop. 1871.

WYTHE, county, Va. Situated toward the S.W. part of the state, and contains 700 sq. m. Drained by New river and its branches; and by branches of Holston river. It contained in 1840, 13,530 neat cattle, 19,782 sheep, 22,739 swine; and produced 85,002 bushels of wheat, 47,020 of rye, 233,793 of Indian corn, 12,059 of buckwheat, 152,446 of

## XALAPA.

oats, 38,307 of potatoes, 13,743 pounds of sugar. It had 15 stores, one fulling-mill, two flouring-mills, 38 grist-mills, 25 saw-mills, one oil-mill, two powder-mills, 13 tanneries, 38 distilleries, one printing-office, one weekly newspaper; one academy, 40 students; 12 schools, 269 scholars. Pop.: whites, 7632; slaves, 1618; free coloured, 125; total, 9375 Capital, Wytheville.

## X.

**XALAPA**, or **JALAPA**, a town of Mexico, state Vera Cruz, on the high-road from Vera Cruz to Mexico, 55 m. N.W. the former. Pop. estimated at 13,000. It stands on a platform, about 4300 ft. above the level of the sea, surrounded by fine mountain scenery, and sometimes subject to heavy fogs. Its climate is generally mild and salubrious, though it is said to be neither so clean nor so well built as Vera Cruz; but it has numerous houses of two stories, built after the old Spanish manner, in a square, enclosing a court planted with trees and flowers, with a fountain in the centre. The cathedral and other churches, though in an indifferently style of architecture, are very gorgeous. This was formerly a great entrepôt for the European trade with Mexico, and large fairs were held here; but its trade has greatly diminished, and its shops and warehouses do not now make much show: at present, indeed, Xalapa is chiefly celebrated for its washing; and many of the inhabitants of Vera Cruz send their clothes hither to have them cleaned. (*Bullock*.) The more wealthy inhabitants of Vera Cruz, and, indeed, of all the adjacent coast district, or *tierras calientes*, resort to Xalapa in the summer to avoid the heat, insects, and fevers of the low country, from all which it is free. The well known medicinal herb *jalap*, grows abundantly in the vicinity of this town, to which it is indebted for its name. (*Ward's Mexico*, ii., 19, 20; *Poinsett's Mexico*, 35-37.)

**XENIA**, p. t., capital of Greene co., O., 61 m. W.S.W. Columbus, 454 W. Drained by Little Miami river and its branches. It has 18 stores, one fulling-mill, one woollen factory, five flouring-mills, eight saw-mills, three printing-offices, three weekly newspapers; 11 schools, 297 scholars. Pop. 4913. The village is situated on Shawnee creek, 3 m. from its entrance into Little Miami river, and is regularly laid out with streets crossing each other at right angles. It contains a courthouse and county offices of brick, a jail of stone, four churches in the immediate vicinity, 10 stores, and about 1200 inhabitants. It has many handsome dwellings, and is surrounded by a highly cultivated country.

**XERES DE BADAJOS**, or **DE LOS CABALLEROS**, a town of Spain, in Estremadura, prov. Badajos, near the Ardilla, a tributary of the Guadiana, 40 m. S. Badajos. Pop. estimated at about 9000. It is walled, and, like most Spanish towns, had numerous monastic institutions; but from its being out of any great route, it is rarely visited by travellers. It has manufactures of linen fabrics, leather, hats, soap, &c., and a large trade in cattle, which are extensively reared in its neighbourhood.

**XERES DE LA FRONTERA**, a city of Spain, in Andalusia, prov. Cadiz, on the road from Cadiz to Seville, near the Gaudalete, 17 m. N.N.E. Cadiz. Pop., according to Miñano, 31,000, which, though perhaps somewhat underrated, is, we suspect, much nearer the mark than Captain Scott's estimate of 50,000. "Xeres is situated in the lap of two rounded hillocks, which shelter it to the E. and W.; and it covers a considerable extent of ground. The city, properly so called, is embraced by an old crenated Moorish wall, enclosing a labyrinth of narrow, ill-built and worse drained streets; but this wall is of no great circuit, and is so intermixed with the houses of the suburbs as to be visible only here and there. The limits of the ancient town are, however, well defined by the numerous gateways still standing. Some of the old buildings and narrow streets are striking in appearance, and the number of gables and chimneys cannot fail to strike one who has been long accustomed to the flat-roofed cities of Andalusia." (*Scott's Ronda*, &c., ii., 79.) It has eight parish churches, among which is one that is collegiate, with a library and a collection of coins; a town hall, numerous convents; a founding, an orphan, and other hospitals; several schools, a college, a public granary, infantry barracks, and an old fortress, are the principal public edifices. The streets, even in the best parts of the city, are disgustingly filthy; and the want of cleanliness is no doubt the main source of the destructive epidemics with which the town is frequently visited.

Xeres derives its principal or rather its sole importance from its being the great emporium of the well-known wine, called sherry, grown in its vicinity. The principal wine merchants reside mostly in the suburbs, where are, also, the largest warehouses. These are all above ground, and

## YAKUTSK.

are immense buildings, with lofty roofs supported on arches, springing from rows of slender columns, having their walls pierced with numerous windows to admit of the thorough circulation of air. (*Scott*, ii., 79, 80.)

The vineyards, mostly situated on slopes, are scattered at considerable distances; in 1818 they were estimated to comprise an area of about 8000 acres; and at present, perhaps, they may extend over 12,000 acres. It is not easy to form any accurate estimate of the produce of the sherry vineyards, partly because there is no accurate account of the exports and of the stocks on hand, and partly because a considerable quantity of the light wine, called *mo-guer*, grown on the right bank of the Guadalquivir, is mixed up with the inferior sherries. Probably, however, the average annual export of sherries may amount to about 20,000 butts (the butt contains about 105 wine gallons), worth from £12 to £65 a butt! It is a mistake to suppose that good sherry is a cheap wine. "It may," says Inglis, "be laid down as a fact, that genuine sherry, one year old, cannot be imported under 30s. a dozen; and if to this be added the profit of the merchant, and the accumulation of interest, it is obvious that genuine sherry, eight years old, cannot be purchased in England under 45s. a dozen." (*Inglis's Spain* in 1830, ii., 82.) When, therefore, any one sees fine old sherry advertised at 30s. or 35s. a dozen, he may be pretty well satisfied that it is a hoax, and that Marsala or cape Madeira, and not sherry, is the staple of the wine.

The finer sherries are all made from the Xeres grape, with the addition of only about two bottles of brandy to a butt, and sometimes of a little Paxarete, or sweet sherry, and of Amontillado. The wines are mostly all kept in very large casks, approaching in some degree to the Heidelberg tun, and when any wine is drawn off from one of these *madre* butts, it is replaced by an equal quantity taken from the next oldest butt, so that it is idle to talk of the sherry found in the market belonging to any particular vintage. The dark or deep brown sherries are occasionally produced by boiling a quantity of pale sherry to one fifth part its bulk, and mixing up this residuum with paler sherries, in quantities proportioned to the shade required. Amontillado, made in imitation of the wine of Montilla, near Cordova, the drier of sherries, is made from a variety of grapes plucked before they are quite ripe. It is the purest of the sherries, and will bear no admixture of either brandy or boiled wine.

England is-and has long been the principal market for sherries. They used originally to be introduced and sold under the name of sack; but it is only of late years, and especially since the decline in the taste for Madeira, that they have come into all but universal use among all classes as a dinner wine. It is not easy, indeed, to account for their extraordinary popularity; for, though sherry of good quality, and kept to a proper age, be a very superior wine, the finer varieties bear no proportion to those that are inferior; and it is, besides, too powerful to be used with any degree of freedom.

To show its popularity it is sufficient to mention that, in 1841, of 6,184,960 gallons wine entered for consumption in the United Kingdom, no fewer than 2,412,821 were sherry! The entries of port during the same year amounted to 2,387,017 gallons, making together 4,799,838 gallons, leaving only 1,385,142 gallons for all the other sorts of wine! (*Scott's Ronda and Granada*, ii., 78, &c.; *Inglis*, ii., 78, &c.; *Henderson on Wine*, 190, &c.)

Of late years port St. Mary, on the N. side of the bay of Cadiz, 10 m. S.W. Xeres, has absorbed a considerable part of the trade of the latter, the wine-merchants who have settled there having the additional advantage of being able to superintend the shipping of their wines. Xeres has a few manufactures of serges, leather, soap, &c., but only for the consumption of its own inhabitants. On the plain outside its walls was fought, A.D. 714, the battle which finally overturned the Visigothic monarchy of Spain, and gave a great part of that country to the Moors. On the Gaudalete, near the scene of this battle, is a Carthusian monastery, founded in 1571, once the most celebrated in Spain, but now in decay.

## Y.

**YADKIN**, river, N. C., rises on the E. side of the Alleghany mountains, and flowing across the state, enters S. C. in Montgomery county, N. C.; it passes through the Narrows, occasioned by mountains contracting it from 200 to 30 feet wide. In the lower part of its course it becomes Great Pedee river, and enters Winyaw bay near Georgetown.

**YAKUTSK**, a town of E. Siberia, cap. of the immense prov. of its own name, on the Lena, about 1150 m. N.E.

## YALABUSHA.

Irkutsk, lat. 62° 1' 50" N., long. 147° 44' E. Pop. about 4000. According to Wrangell, "Yakutsk has all the character of the cold and gloomy north. It is situated on a barren flat, near the river. The streets are wide, but the houses and cottages are poor in appearance, and are surrounded by tall wooden fences. Here are five churches, a convent, a stone building for commercial purposes, and an olden wooden fortress with its ruined tower, built in 1647, by the Cossack conquerors of Siberia. The town has, however, undergone great improvements in the last thirty years. The Yakut huts have been replaced by substantial houses; the windows of ice or talc, have given way to glass in the better class of houses, and the more wealthy inhabitants begin to have higher rooms, larger windows, double doors, &c.

"Yakutsk is the centre of the interior trade of E. Siberia. All the most costly furs, as well as the more common kinds, walrus teeth, and fossil remains, are brought here for sale, or barter, during the ten weeks of summer, from Anabur and Behring's straits, the coasts of the Polar sea, and even from Okhotsk and Kamtschatka. It is not easy to imagine the mountain-like piles of furs of all kinds seen here; their value often exceeds 2,500,000 roubles. Almost all the Russian settlers in Yakutsk employ their little capital in purchasing furs from the Yakuti during the winter; on which they realize a good profit at the time of the fair, when they sell them to the Irkutsk merchants.

"As soon as the Lena is clear of ice, the merchants begin to arrive from Irkutsk, bringing with them for barter, corn, meal, the pungent Circassian tobacco, tea, sugar, brandy, rum, Chinese cotton, and silk stuffs, yarn, cloth of inferior quality, hardware, glass, &c. But at the annual fair there is not the appearance of animation and bustle, which might naturally be expected. The goods are not exposed for sale, and most of the purchases are effected in the houses or enclosures of the citizens." (*Wrangell's Siberia*, 11-13.) Dobell says, that the inhabitants are hospitable and gay. Several balls were given during his stay, and the dress, manners, and appearance of the people far surpassed what he expected in so remote a situation. (*Trav.* ii. 12.) The variations of climate are extraordinary; for, though, on the whole, cold predominates to a very great extent, the thermometer in winter often falling to 40° R., or 56° below the zero of Fahr! The heat in summer is sometimes not inferior to that of the torrid zone!

The vast province of Yakutsk comprises, at least, three fifths of E. Siberia, and is watered by the great rivers Lena, Yana, Indigirka, and Kolyma, which supply vast quantities of fish. Iron, salt, and excellent talc, are the chief mineral products; game, of many kinds, abounds. Large herds of cattle, &c., are reared near Yakutsk, and notwithstanding the severity of the winters, rye, barley, and even wheat, are said to succeed well throughout the province, except in those parts which are so far N. as to render the summer too short for ripening grain. (See *Dobell's Travels in Siberia*, ii., 21, &c.; *Wrangell's Siberia and the Polar Sea*, &c.)

YALABUSHA, county, Miss. Situated centrally toward the N. part of the state, and contains 730 sq. m. Drained by Yalabusha river and its branches. It contained in 1840, 14,976 neat cattle, 4298 sheep, 33,512 swine; and produced 14,958 bushels of wheat, 543,685 of Indian corn, 32,660 of oats, 27,739 of potatoes, 4110 pounds of tobacco, 4,030,644 of cotton. It had one commission house in foreign trade, 23 retail stores, one flouring-mill, 44 grist-mills, 13 saw-mills, five tanneries, two distilleries, one printing-office, one weekly newspaper; two academies, 65 students, 31 schools, 558 scholars. Pop.: whites, 6640; slaves, 5601; free coloured, 7; total, 12,248. Capital, Coffeeville.

YANCEY, county, N. C. Situated in the W. part of the state, and contains 1760 sq. m. It contains, in its E. part, the highest land in the United States, E. of the Rocky mountains. The three highest peaks are Black mountain, 4476 ft. high, Roane, 6038, Grandfather, 5556 ft. above the level of the ocean, which are higher than the three highest peaks of the White mountains in N. H. Drained by Nolichucky river and its branches. It contained in 1840, 5585 neat cattle, 5041 sheep, 18,718 swine; and produced 6320 bushels of wheat, 2848 of rye, 405,390 of Indian corn, 33,670 of oats, 89,731 of potatoes, 4830 pounds of tobacco. It had two forges, 42 grist-mills, three saw-mills. Pop.: whites, 5681; slaves, 254; free coloured, 27; total, 5962. Capital, Burnsville.

YANINA, improperly JOANNINA, (probably the an. *Eurea*), a city of European Turkey prov. Albania, of which it is the cap.; on the W. bank of the lake of its own name, 80 m. W. by N. Larissa. Lat. 39° 47' N., long. 21° 1' E. Population said to be at present about 12,000. It occupies a small peninsula, extending into the lake, and part of the adjacent shore, its site, being tolerably level. Twenty-five years ago Yanina was a town of 30,000 inhabitants, with numerous mosques, many large and well-built houses, and several palaces. It had then a considerable trade with

## YARMOUTH.

the rest of Epirus, Roumelia, Wallachia, &c.; and a large annual fair, to which a good deal of Italian produce, with French and German manufactures, &c., were brought. It was, however, set on fire by order of its barbarian and bloodthirsty tyrant, Ali Pacha, in 1820, and was almost wholly ruined. The streets are narrow and crooked, and the houses now are mostly of mud. Numerous vacant spaces especially about the citadel, are covered with ruins, and all its animation is confined to the bazaar. (*Burgess's Greece*, i. 61-63.)

The lake of Yanina is about 6 m. in length, and nearly 3 in its greatest breadth: it is narrowest at the N., and gradually expands towards the S. Mr. Burgess says that the scenery around it would be fine if its banks were wooded; but as it is, the lake is far inferior in respect of beauty to those of Italy or Switzerland, and is excelled by some of the Scottish lakes. An island opposite the peninsula has a church and monastery. The description given by modern travellers of the site of Yanina and its lake, answers perfectly to that of the city and lake of Euræa by Procopius. Justinian built a fortress at Euræa, apparently on the identical site now occupied by the citadel of Yanina. (*Cramer's Ancient Greece*, i. 141, 142; *Burgess's Greece*, &c.; *Hobhouse*; *Hughes*; *Cramer's Greece*, &c.)

YANTIC, river, Ct., rises in Lebanon, and enters Thames river at Norwich city, through a cove which sets up a mile from the river. At its entrance into the cove, it has falls which afford great water-power, and where is a flourishing manufacturing village.

YARKUND, the chief city of Chinese Turkestan, in a fertile plain, on the river of its own name, lat. 39° 19' N., long. 76° 17' 45" E. Its population has been variously estimated, but may probably amount to 50,000, exclusive of the Chinese garrison. (*Burnes's Bokhara*, &c., iii. 193.) It is enclosed by an earth rampart, pierced with five gateways, outside which are extensive suburbs: there are two citadels, one in the suburbs, and the other in the town. The houses, built of stone and clay, are mostly only one story in height; the streets are intersected by numerous canals and aqueducts which bring water from the river for the use of the inhabitants. Yarkund has two large bazars, numerous mosques, and 10 or 12 Mohammedan colleges, most of the native inhabitants being Mussulmen, though much more lax in their religious prejudices than their neighbours to the W. About 2000 Chinese merchants reside in the place, and some Cashmerians and Persians, but only a few Hindoos, and neither Jews nor Nogai Tartars. When Marco Polo visited this city, he found some Nestorian Christians among the inhabitants. (*Ritter, Erdkunde von Asien*, p. 390-400.)

"The productions of China," says Sir A. Burnes, "are transmitted to this province, and sold to the natives of Bokhara and Thibet, who are permitted to frequent certain fixed markets. No Chinese crosses the frontiers; the trade to Bokhara being carried on by Mohammedans, who visit Yarkund for that purpose. The same vigilance to prevent the ingress of foreigners is here exhibited as upon the sea-coast." Horses are a great article of trade; and it was chiefly to open a traffic in these animals, that Moorcroft desired to reach Yarkund, in which attempt, however, he was frustrated by the jealousy of the Chinese authorities. "Yarkund with the adjacent province of Cashgar, formed the principality of a Mohammedan Khojir. Dissensions arose in the reigning family about 80 years since (in the time of Kien-long), and they called on the Chinese government as a mediator, which, as frequently happens, acted the part of a conqueror. The period which has elapsed since the capture of Yarkund has in no way diminished the precautions of the Chinese government. Yarkund is still considered but an outpost, and the communication between it and Peking is maintained in a most characteristic manner." (See *Burnes*, iii. 193-196.) The Mohammedan natives, indeed, fill the subordinate offices of state, but under the strict superintendence of the Chinese authorities. The garrison, consisting of from 5000 to 7000 soldiers, are recruited from boys of 14 and 15 years old, who are sent back, after about as long a period of service. (*Burnes*.) According to some Chinese documents, the annual tribute of the Yarkund people to the Chinese comprises 30 oz. of gold, 35,000 do. of silver, 30,000 sacks of corn, 80 lbs. of oil, 57,000 pieces of linen, 15,000 lbs. of cotton, 3,000 lbs. of copper, &c. (*Ritter, Erdkunde*, v. 402; *Klaproth*; *Marco Polo*; *Watken*, &c., in *Calc. Asiat. Journ.*, &c.)

YARMOUTH, a par. and munic. bor. and seaport of England, partly and principally in the co. Norfolk, but partly, also, in that of Suffolk, on the Yare, at its mouth, in the North sea, 19 m. E. by S. Norwich, and 108 m. N.E. London. Lat. 52° 36' 40" N., long. 1° 44' 22" E. The old par. borough, which included the hamlet of Southtown, in Suffolk, in the parish of Gorleston, on the S. side of the river, had an area of 2110 acres, with, in 1831, a population of 23,332; but the modern par. borough includes the whole parish of Gorleston, comprising the village of that name,

## YARMOUTH.

and has an area of 3940 acres, with, in 1831, a population of 25,448, and, in 1841, of about 28,000. The part of the town on the E. side of the Yare, or Yarmouth properly so called, occupies a narrow peninsula, between the sea on the one hand, and the river on the other. "It consists of four principal lines of streets running nearly parallel with the river, and of an immense number of narrow lanes, or rows, that form the lateral communications between these streets. Very few of the rows exceed from 5 to 8 ft., and only two of them at the opposite ends of the town were passable for common wheel-carriages until the widening of some others in the centre of the town, not long since formed the street called Regent-street. The principal streets are well built, and wide, opening in some places into a spacious quay, market-place, and squares; and the town presents, on the whole, a thriving appearance. The best dwelling-houses are situated along the quay; many of these are substantial and handsome, as are, also, many of those in the other principal streets. Most of the shops are situated in the market-place, King-street, Broad-row, and Market-row; and the warehouses, granaries, malt-houses, and fish-offices, together with the inferior dwelling-houses, are in the different rows. On the N., E., and S., the town is enclosed by old walls, beyond which is an intermixture of every description of buildings; but principally of extensive warehousing premises, and residences of an inferior class. This part is not paved, and only partially lighted, and principally with oil lamps; but the whole of the town within the walls is well paved, and lighted with gas. A considerable extension beyond the old walls has taken place on the E. side; and long lines of streets, besides many detached dwellings and extensive fish-offices, and other premises connected with the trade of the place, now occupy a great part of the space between the town and the sea shore, particularly towards the new jetty. New-houses are in progress also on the N. side of the town, along the road leading toward Caistor; and along the road toward Nelson's monument, S. of the town, the whole of which neighbourhood, and more especially the line fronting the sea, it is contemplated to cover with a new town.

"Yarmouth is connected by a bridge over the Yare with Southtown or Little Yarmouth. This suburb, forming the N. part of Gorleston parish, consists principally of neat and substantial private residences; with docks, timber wharfs, building yards, &c., on the river, and in which much of the business of this port is carried on. The other distinct group of buildings in Gorleston, which forms the village or town of that name, lies considerably more to the S., nearer to the entrance of the harbour. South town is very imperfectly lighted; and Gorleston is neither paved nor lighted." (*Jun. Corp. Rep.*)

Yarmouth quay is one of the most extensive and finest in England: it is upwards of 1 m. in length, and in some places 150 yards in breadth, having in its centre a planted promenade. Here is the town-hall, a handsome edifice with a Tuscan portico; the council-chamber, which is highly decorated, has a full-length portrait of George II. The Star Inn, near the town-hall, was once the residence of Bradshaw, president of the high court of justice which condemned Charles I.; and some of its apartments still remain apparently as he left them, or even as they were at an earlier period, for the house is of the Elizabethan age. Yarmouth parish church is one of the largest ecclesiastical edifices in the kingdom. It was originally founded in the time of William II.; but the most ancient parts of the present edifice date no further back than about 1250; and, according to Rickman, only a portion of the building is early English; other parts, particularly the windows, being of the decorated and perpendicular styles. (*Rickman's Gothic Architecture*, p. 208.) It is 230 feet in its greatest length, by 108 feet in breadth. At the W. end are four octangular towers, the outermost of which are surmounted with plain pinnacles, as are the octangular towers at each angle of the S. transept. The tower, at the intersection of the transepts with the nave, formerly decorated with pinnacles, is now embattled, and supports a tall fluted spire, erected in 1807, a conspicuous mark from the sea. The part of the interior W. of the tower forms a spacious choir, the ceiling of which is panelled into compartments, having coats of arms of different branches of the royal family of England; and of the Fastolfs, Gournays, Bardolfs, and other proprietors of the neighbouring castle of Caistor. The organ in this church is one of the finest in England; and it has many interesting monuments. The churchyard, comprising about 6 acres, is entered by handsome iron gates; on its W. side was standing, till the present summer, the leaf gate, a curious brick archway of the time of Charles I. The living, a perpetual curacy, worth £243 a year, is in the gift of the dean and chapter of Norwich. A chapel-of-ease was built in 1716; and the living, a curacy worth £100 a year, is in the gift of the corporation of Yarmouth, the minister's salary being derived from a local duty on coal. The living of St. Peter's

church, an edifice in the Tudor style, built under a recent act, is a perpetual curacy, worth £160 a year, in the gift of the incumbent of St. Nicholas' (the parish) church. Attached to the living of Gorleston and Southtown is a curacy, with a separate church, a modern erection, called St. Mary's chapel, worth £200 a year, lately in the gift of trustees. (*Ecclesiast. Rev. Rep.*) Here, also, are chapels for Roman Catholics, Independents, Unitarians, Friends, Baptists, a Jews' synagogue, &c.; and some remains exist of various convents suppressed at the Reformation. A free grammar-school was formerly supported by the corporation, but it ceased to exist about the end of last century. The children's hospital, founded in the reign of Edward I., is under the government of the corporation, and has an income of £857 a year: it serves as a workhouse, and, also, maintains and clothes 30 boys and 20 girls, and 100 children are taught as day scholars. All children of parents belonging to the town are eligible to be admitted as day scholars, and, as vacancies occur, to become boarders by rotation, according to seniority. The charity school, founded in 1713, clothes and educates a considerable number of children; here, also, is a Lancasterian school, which educates about 150 boys; a girls' school, founded in 1810, for educating and clothing 80 poor girls; and a proprietary grammar school, founded in Southtown in 1833. The Fishermen's hospital, established and built in 1703, was chiefly supported by an annual government grant of £160 a year, deducted from the beer duties, till 1832, when it was discontinued, in consequence of the repeal of the beer duty. The hospital is, however, otherwise endowed, and, at the date of the late inquiry, had an income of £56 10s. a year. Warren's charity, established in 1694 for the general relief of the poor, sick, orphans, widows, &c., has an income of about £375 a year; and there are several other endowments for schools and other charitable purposes. (*Charities' Rep. XXXI.; and Digest, &c.*)

There is in the town a very extensive silk factory for the winding and throwing of silk, and the weaving of crapes and other silk goods. The municipal corporation report of 1836 states that "Ship-building, and the various trades with it, are also carried on to some extent in Yarmouth; nevertheless, it cannot be considered as a manufacturing town, but derives its importance and prosperity from the trade and commerce which it owes to its situation and port. The rivers, Yare, Waveney, and Bure, which unite in Braydon water, adjoining the town, are navigable; the first to Norwich, the second to Bungay, and the Bure to Aylsham; and they secure to Yarmouth an extensive trade in the exportation of the agricultural produce of the districts traversed by these rivers, and in supplying them with coals and other heavy goods. The export of grain and malt from this port is considerable, of barley greater than from any other part in England; but the principal business of Yarmouth is the herring and mackerel fisheries, and the curing and exportation of the herrings to foreign countries, particularly the states bordering on the Mediterranean. An extensive timber trade with the Baltic is also carried on to a considerable number of square-rigged vessels belong to the port. Yarmouth roads have long been the principal rendezvous of the vessels in the collier trade; and the town derives some advantages from the supply of fresh provisions to them.

"The harbour of Yarmouth is formed by the river Yare: it has an awkward entrance obstructed by a bar. Great attention, however, appears to be bestowed on remedying this defect, and on the improvement of the port generally. Vessels drawing about 12 ft. water, or of about 200 tons burden, can cross the bar, and proceed up to the town at spring tides." The chief improvements of the harbour were effected by a Dutchman named Johnson, employed for the purpose, who first erected piers at the mouth of the river.

Yarmouth roads, between the town and a line of outer sand banks, though so much frequented, are by no means free from danger. They are marked by buoys and floating lights. There belonged to the port, in 1842, 321 boats of under 50 tons each, and 312 vessels of above 50 tons each, the aggregate burden of the latter being 34,320 tons.

Yarmouth is the principal seat of the herring English fishery. The herrings usually make their appearance in the roads about the middle of September, when the fishery begins, and continues till towards the end of November. They are partly cured, and partly sent fresh into the metropolis. The fishery of cod, mackerel, skate, soles, red-mullet, whiting, &c., is also extensively carried on. In 1840, the gross customs duties received at Yarmouth, amounted to £46,732.

Yarmouth has been, for a long time, more or less frequented as a bathing place, for which, indeed, it is well fitted by its salubrity and its firm shelving sea-beach. It has, also, a pier, projecting 450 ft. into the sea, with public baths, assembly rooms, a neat theatre, a public library, public gardens, and all the establishments usual at a watering-place. To the N. and S. of the town, facing the sea, are open and

## YATES.

level pieces of ground covered with verdure, called the Denes; and on the most southerly of these is a beautiful fluted column designed by Wilkins, erected in 1817 in honour of Nelson: it is 144 ft. in height, and is surmounted by a statue of Britannia. On other parts of the Denes, are various batteries, the barracks, a fine edifice, formerly a naval hospital, built in 1809, at an expense of £120,000; a new workhouse, erected in 1839, at an expense of £8000; numerous windmills, a race-course, &c. On other sides the environs of Yarmouth have no particular beauty; but the country is well cultivated, and the markets of the town are well supplied. Within a few miles, on the Suffolk side, are extensive remains of the Roman station *Gariannonum*, so called from its situation at the mouth of the *Garienis* or Yare; and within a similar distance, on the Norfolk side, are the ruins of Calstoe castle, formerly a sumptuous mansion, erected by Sir J. Pastolfe soon after the battle of Agincourt.

The first charter of incorporation possessed by Yarmouth appears to have been granted by John in 1203; but the governing charter previously to the late acts was that granted by Queen Anne, in 1702. Under the Municipal Reform Act the borough is divided into six wards, and is governed by a mayor, 11 other aldermen, and 36 councillors. Corporation revenue, about £6000 a year.

Yarmouth has sent two members to the House of Commons, with little intermission, since the time of Edward I., the right of voting, down to the Reform Act, having been in the sons of freemen, and in apprentices serving a seven years' apprenticeship to freemen within the borough. Registered electors, in 1839-40, 1904. It has two banks. The borough has a commission of the peace, and a jail, an admiralty court held weekly by the mayor, a 40s. court of requests, courts leet, piepoudre, &c. The maritime jurisdiction of the corporation extends for 10 m. up the rivers Bure, Yare, and Waveney. Two markets are held weekly; that on Saturday is extensive, that on Wednesday of minor importance. A fair is held on Friday and Saturday in Easter week; a regatta annually, &c.

Yarmouth communicates with Norwich daily by three coaches and two steamboats, London, Colchester, Ipswich, Bury, &c., by daily coaches, and with London and Hull by steam packets; the Leith, Dundee, Aberdeen, and other steamers, usually call here in fine weather. (*Bound., Mun., Corp., and other Parl. Reps., and Local Information.*)

YARMOUTH, a market town and par. of England, on the N.W. shore of the Isle of Wight, at the mouth of the little river Yar, immediately opposite Lymington, and 9 m. W. Newport. Area of par. 50 acres. Pop. of ditto, in 1831, 586. This town, which has long been in a stationary state, would have been wholly unworthy of notice in a work of this kind but for the circumstance of its having enjoyed the important privilege of sending two members to the House of Commons from the era of Edward I. down to the passing of the Reform Act, by which it was most properly disfranchised. It was, in fact, one of the most perfect specimens of a proprietary borough. (*Parl. Reps., &c.*)

YARMOUTH, p. t. Barnstable co., Mass., 78 m. S.E. Boston, 479 W. It extends across Cape Cod. Bounded S. by the Atlantic, N. by Cape Cod bay. It contains four churches, a Congregational, Methodist, Baptist, and Universalist, 13 stores, six grist-mills, one tannery, one printing-office, one weekly newspaper; one academy, 45 students; 13 schools, 627 scholars. Pop. 2554. It has extensive salt works, and a number of vessels employed in the cod and mackerel fisheries.

YATES, county, N. Y. Situated W. of the centre of the state, and contains 320 sq. m. Bounded E. by Seneca lake and N.W. by Canandaigua lake. Crooked lake enters its S. part, and has its outlet through it into Seneca lake, affording good water-power. Crooked Lake canal connects that lake with Seneca lake, and thus with the Erie canal. Organized in 1823. It contained, in 1840, 16,989 neat cattle, 86,876 sheep, 18,475 swine; and produced 352,814 bushels of wheat, 2102 of rye, 104,066 of Indian corn, 20,891 of buckwheat, 30,994 of barley, 162,483 of oats, 170,318 of potatoes, 2000 pounds of hops, 39,384 of sugar. It had 51 stores, three furnaces, 14 fulling-mills, three woolen factories, seven flouring-mills, 13 grist-mills, 62 saw-mills, one oil-mill, eight tanneries, two distilleries, two printing-offices, two weekly newspapers, and one periodical; 112 schools, 6207 scholars. Pop. 20,444. Capital, Penn Yan.

YATES, p. t., Orleans co., N. Y., 12 m. N. Albion, 266 m. W. by N. Albany, 409 W. Bounded N. by lake Ontario. Drained by Johnson's creek. It has five stores, one furnace, one fulling-mill, one grist-mill, five saw-mills; 14 schools, 663 scholars. Pop. 2230.

YAZOO, river, Miss., is formed by the junction of Tallahatchee and Yalabusha rivers in Carroll co., and flows S.S.W. into Mississippi river, 12 m. above the Walnut Hills. It is 100 yards wide at its mouth, and is navigable for boats for 50 miles, in high stages of the water.

YAZOO, county, Miss. Situated W. of the centre of the

## YEOVIL.

state, and contains 650 sq. m. Bounded N.W. by Yazoo r., S.E. by Big Black river, and drained by their tributaries. It contained, in 1840, 19032 neat cattle, 2636 sheep, 30,179 swine; and produced 834 bushels of wheat, 1746 of rye, 536,340 of Indian corn, 81,035 of oats, 139,964 of potatoes, 7350 pounds of rice, 2705 of tobacco, 12,085,802 of cotton. It had nine commission houses in foreign trade, 24 retail stores, two grist-mills, three saw-mills, two printing-offices, two weekly newspapers; 11 schools, 255 scholars. Pop.: whites, 3116; slaves, 7339; free coloured, 25; total, 10,450. Capital, Benton.

YECLA, a town of Spain, prov. Murcia, at the foot and on the declivity of a hill, 43 m. N. by E. Murcia. Pop., according to Miñano, 11,600. It was formerly walled and had a fortress, but of these there are now no remains. Its principal buildings comprise two parish churches, some convents, a hospital, an ecclesiastical tribunal, and a prison. Its neighbourhood is very fertile; and its inhabitants are mostly occupied in the production of corn, flour, wine, brandy, and leather. Near Yecla are the traces of a more ancient town, where various Roman antiquities have been discovered. (*Miñano; Dict. Geog.*)

YEDDO, or JEDDO, the chief city of Japan, and the residence of the *sjogun* or military emperor; on the S.E. shore of the island of Nippon, prov. Monsasa, at the bottom of the bay of Yeddo; lat. 36° 39' N., long. 140° E. Its population has been variously estimated at from 700,000 to 1,500,000; but the probability is, that the first of these numbers is beyond the mark. Yeddo is said to be surrounded by a ditch, and intersected by numerous canals and branches of the river Toniaki, which are navigable for vessels of moderate burden. It has two large suburbs. Its internal plan would appear to be less regular than that of most other Japanese cities; but its streets and squares are clean, and some of the former are of prodigious length. Each street is appropriated to persons of one trade only, lined with covered arcades, and closed at night by gates at each extremity. The houses are mostly two stories in height; but being built almost wholly of wood, destructive fires are very frequent. Yeddo has many temples, Buddhist convents, and other large public buildings: the emperor's palace occupies a large extent of ground. This city has a considerable trade; but there are no materials for forming any estimate of its amount. For farther information as to Yeddo, we must refer the reader to the works of Kämpfer, Thunburg, Siebold, &c.

YELL, county, Ark. Situated W. of the centre of the state, and contains 936 sq. m. Bounded N.E. by Arkansas river, and drained by its tributaries. Formed since the census of 1840. Capital, Danville.

YEMEN, a district of Arabia, which see.

YENISEI, a great river of N. Asia, in Siberia, through the central part of which it flows, its basin lying between those of the Lena to the E., and the Obi to the W., is supposed to comprise an area of near 1,000,000 sq. m., being about the same size as the province of Yeniseisk. The Yenisei rises within the Chinese empire, not far from lat. 51° N., long. 98° E., and proceeds at first W. for about 50° of long., to near the point where it leaves the Chinese frontier. It then turns northward, and pursues generally a northerly course to the Arctic ocean, which it enters by a wide estuary called the bay of the 73 islands, the mouth of which is in about lat. 72½° N., long. 85° E., about 200 m. E. of the gulf of Obi. The entire course of the Yenisei has been estimated at 2600 m. Its chief affluents join it from the E., its tributaries from the W. being of much less importance. Various towns in the upper, with Krasnojarsk, Yeniseisk, &c., in the middle and lower part of its course, are on its banks; Irkutsk is on its great tributary the Verkhnie-Tungoska, which flows out of lake Baikal. As far as Krasnojarsk it runs through a mountainous country, and thenceforward to Yeniseisk, where its width, when highest, is about 1 m.; its banks are elevated and precipitous. A survey of the river was completed last century by the Russian government, up to this town; and from this it appears that its channel varies from 2 to 8 fathoms in depth. This noble stream, however, like the other large rivers of Siberia, is but of little use, inasmuch as it flows, for the most part, through desolate wastes; its embouchure being also in a frozen sea, and the river itself being frozen over for the greater part of the year. The Russian surveyors were stopped in their progress upwards, by the ice at Turnshansk on the 1st of October, and by the 10th the river was completely frozen over; and it was not till the succeeding 4th of June that they were enabled to proceed with their survey. (*See Wrangell's Siberia, &c. Introd.; Dict. Geog.*)

YEOVIL, a market town and par. of England, county Somerset, hund. Stone, on the border of Dorset, on the Yeo or Ivel, a tributary of the Parrott, here crossed by a stone bridge, 18 m. S. Wells. Area of parish, 3890 acres. Pop. of do., in 1831, 5921, of whom about 500 inhabited the town. Yeovil comprises about twenty streets and lanes;

## YEZD.

some of which are wide and open thoroughfares, the houses being generally good and built of freestone. The parish church, a light Gothic structure, with a large plain tower at the W. end, is supposed to date from the time of Henry VI. An ancient crypt, an adjoining chapel, and a handsome altar in the church, are worthy of notice. The living, a vicarage, with the curacy of Preston, of the clear annual value of £391, is in the gift of — Phillips, Esq. Here, also, are places of worship for Unitarians, Baptists, Wesleyans, Independents, &c. The free-school, endowed in 1707 and subsequently, had recently an income of £114 a year, and at the date of the last inquiry, 30 boys were taught reading, writing, and arithmetic, 14 of whom were clothed and apprenticed, and one taught Latin. An almshouse for a master, two wardens, and 12 poor men and women, had an income of £291 a year; and, exclusive of these, there is an almshouse for four poor women, and several minor charities. (*Digest of Charity Reports.*)

Yeovil was at one period celebrated for its woollen manufactures. But these appear to have been early superseded by the glove trade, the latter having attained to considerable importance in the town so far back as the middle of the 16th century. "At present the manufacturers are employed in making men and women's fine gloves; which pass in the retail shops as kid gloves, but are, in reality, made from lamb skins imported from Italy, Spain, and Germany. These skins are mostly dressed into leather in Yeovil, in which place the manufacturers are leather dressers and large dealers in wool, as well as gloves. The quantity of gloves made in Yeovil, of all sorts, may be estimated at 300,000 dozens annually; and the number of men, women, and children employed in the place and the adjoining districts, (spreading over 20 m.) amounts, perhaps, to 20,000. (*Hull's History of the Glove Trade*, 70, 71.)

The use of cotton and woollen gloves, and the importation of French and other foreign leather gloves, has of late years seriously depressed the trade of Yeovil; though, according to the statement in the appendix to the Municipal Corporation Report, about £70,000 a year are said to have been paid as wages (in 1836) to persons engaged in the glove trade of the town and its vicinity, and that the town was increasing. Yeovil claims to be a borough by prescription, its government having been till lately vested in a portreeve and 11 burgesses; but their authority was very circumscribed, and all the courts formerly held by the corporation have fallen into disuse. Market-day, Friday, when a good deal of butter cheese, corn, &c., is sent into the town; and large quantities of the butter made in the surrounding district are purchased, and sent to London, to be sold as Dorset butter. Fairs, June 29th and Nov. 17, chiefly for farm stock. (*Parliament Reports*; *Hull's History of the Glove Trade*, &c.)

YEZD, a considerable city of Persia, in the E. part of which it is situated, about 250 m. E. by S. Ispahan. Its population has been variously estimated; but if the statement of Kinnair, who assigns to it 24,000 houses, be near the mark, it must certainly be one of the most populous cities in the empire. It is situated in a sandy desert, near a range of high mountains, and has a fort, but no other defensive works. Being at the point of union of the principal roads connecting Ispahan, Kirman, Meshed, and Herat, it is consequently a considerable emporium. Its bazaar is said to be well supplied with provisions; though, from the sterility of the adjacent country, its supplies of corn have, for the most part, to be brought from Ispahan, and cattle are both scarce and dear.

The manufacture of silk stuffs in this city was, some years ago, superior to any other in Persia, and the village of Tuft, about 8 m. S.W., was equally famous for its *numuds*. Here, also, are some fabrics of arms and sugar refineries. Formerly a good many Hindoos were settled in the town, but these were driven away by the exactions of a late Persian governor: it has still, however, numerous families of Parsees (Guebres, or fire-worshippers) among the population; this being almost the only town in the Persian dominions where they are now met with. Though an oppressed, they are an exceedingly industrious people. (*Kinnair's Pers. Emp.*, 113, 114; *Dict. Geog.*, &c.)

YONKERS, p. t., Westchester co., N. Y., 132 m. S. Albany, 242 W. Watered by Bronx and Saw-mill rivers. It has three academies, 75 students; five schools, 210 scholars. Pop. 2968. The village is on the E. side of Hudson river, at the mouth of Saw-mill river, where is a steamboat landing.

YONNE, a dep. of France, reg. centre, formerly comprised for the most part, in Champagne and Burgundy, principally between lat. 47° 30' and 48° 30' N., and the 3rd and 4th degrees of E. long., having N.W. the dep. Seine-et-Marne, N.E. Aube, E. Cote d'Or, S. Nievre, and W. Loiret. Area, 728,747 hectares. Pop., in 1836, 352,457. Surface undulating; the hills scarcely anywhere rising to more than 690 ft. in height: the most elevated are in the S.W.,

## YORK.

separating the basin of the Seine from that of the Loire. The Yonne, whence the dep. takes its name, rises in Nievre, near Château-Chalon, and runs generally northward to the Seine, which it enters at Montreau, in the dep. Seine-et-Marne, after a course of about 177 m.; for 70 of which, or as high as Auxerre, it is navigable. It traverses the dep. of Yonne nearly in its centre, receiving within its limits the Cure, Serein, and Armançon from the E., its tributaries from the opposite side being inconsiderable. It communicates with the Loire by the canal of Nivernais; and with the Saône by that of Burgundy. A great part of the soil is calcareous, or gravelly, but about 300,000 hectares are said, in the *Official Tables*, to consist of rich land; and more corn is grown than is required for home consumption. In 1841, the arable lands were estimated to comprise 453,100 hectares; meadows, 31,265 do.; vineyards, 37,543 do.; and woods, 146,570 do. Hugo estimates the annual produce of corn, mostly wheat and oats, at 2,060,000 hectolitres, and that of wine at 1,110,000 do. The growths of this dep. are known as those of Lower Burgundy; the red wines of Tonnerre and Auxerre are especially esteemed; and the secondary growths of Epineuil, Irancy, &c., are also in high estimation. Chablis, the best of the white wines, is served up by the French epicures with oysters. Wines of this class *sont spiritueux sans être trop fumeux, ont du corps, de la finesse, et un parfum très agréable*. The consumption of the department does not exceed 250,000 hectolitres, the rest being mostly sent to Paris, the N. of France, and foreign countries, little brandy being made. The orchards, which comprise nearly 6000 hectares, are of importance; and Yonne, along with Loiret, supplies Paris with all the *raising* consumed by its inhabitants. Fewer cattle and sheep are reared in this than any other part of the central departments. The forests abound with game, and produce great quantities of charcoal, the trade in which is extensive. Iron, marble, lithographic, and many other kinds of stone, gun flints at Cerilly, lime, and clay, are the principal minerals. Bricks and tiles are made in large quantities, and glass, earthenware, &c., in various places. The manufactured products include woollen stuffs and yam, blankets, serges, &c.; beet-root sugar, paper, glue, &c.; hydraulic clocks made at Sens, barrels at Avallon, &c. The chief trade of the department consists in the export of its wines, corn, timber, and other agricultural produce. In 1835, of 190,786 properties subject to the *contribution foncière*, 108,342 were assessed at less than 5 fr., and 28,578 at from 5 to 10 fr.; the number of those assessed at 1,000 fr. and upwards, amounted to only 161. Yonne is divided into five arrondis.; chief towns, Auxerre the capital, Avallon, Joigny, Sens, and Tonnerre. It sends five members to the chamber of deputies. Number of electors, in 1838-39, 1839. Total public revenue, in 1831, 11,344,924 francs. (*Hugo*, art. *Yonne*; *Dict. Geog.*; *French Offic. Tables*.)

YORK, a marit. co. of England, being by far the largest and most important in that part of the United Kingdom, is bounded on the N. by the co. Durham, E. by the North sea, S. by the counties of Lincoln (from which it is separated by the Humber), Nottingham, and Derby, and W. by Lancaster and Westmoreland, and a small part of Chester. Area, 3,669,510 acres, of which about 2,500,000 are supposed to be arable, meadow, and pasture. It is divided into the districts of the North, East, and West Ridings, being respectively as large as counties, and each of them having its particular lord lieutenant: there is besides a separate smaller district called the city of York and Ainsty; but the latter, except in so far as the city is concerned, has been united to the W. Riding. The extent, population, &c., of these different divisions are as follows:

	Area, Acres.	Inhabited Houses in 1841.	Population in 1841.
North Riding . . .	1,375,820	42,509	204,602
East Riding . . .	711,360	38,380	193,676
West Riding . . .	1,629,890	226,473	1,154,924
City and Ainsty . .	52,440	7,710	38,322
Totals . . . . .	3,669,510	315,032	1,591,524

Owing to its extent and various capacities, Yorkshire presents an epitome of the whole kingdom with respect to surface, soil, products, and industry. Some of the mountains on its W. border, are among the highest in the great central ridge extending from Scotland S. to the middle of Derbyshire; and both there and in its N. division are very extensive tracts of high, sterile, moor ground. In the E. Riding a large tract of wolds extend from Flamborough head to Filey head, on the coast, to Pocklington and Market Wighton; but, notwithstanding these deductions, Yorkshire contains a great extent of most excellent land. The vale of York, the district of Cleveland in the N.; and that of Holderness in the S.E., besides various other extensive tracts in different parts of the county, are exceedingly fertile, possessing soils suitable for every purpose, either of

## YORK.

arable or stock husbandry. The climate is as various as the soil and elevation; but, except on the high grounds, it is mild and early, and is everywhere salubrious, except on the low, marshy grounds along the Humber. Agriculture in a medium state of improvement; not so far advanced as in Northumberland or Lincoln, but not so backward as in several other counties. There is, in this respect, however, a great difference in the different ridings, agriculture being in a much more advanced state in the W. riding than in either of the others. The general rotation is there—1st, turnips or fallow; 2nd, barley; 3rd, seeds; 4th, wheat. Bone manure is much used, but not to so great an extent as rape-dust; the latter, however, is principally used for wheat, the bone manure being decidedly superior for turnips. Drainage is too much neglected in the N. and E. ridings. In the latter no system is acted upon, except in the wolds where the rotation is—1st, turnips; 2nd, barley; 3rd, seeds, 4th, wheat. In other parts of this riding, and in the N. riding, two corn crops not unfrequently follow in succession, and but few operations are performed as they ought to be. (*Kennedy and Grainger*, i. 367.) York is more of a grazing than of an agricultural county. Vast numbers of horses are bred in most parts. Those in the highest estimation are called Cleveland bays, partly from the district in which they were originally found in the greatest perfection, and partly from their colour; but they are now very widely diffused. They are in extensive demand as carriage-horses. Cattle very various; they consist mostly of the long-horned breed; but there are considerable numbers of short horns, with endless varieties produced by crosses between these and other breeds. At present, the Teeswater and Holderness breeds are the greatest favourites with the graziers; but the long horns, or a cross between them and the short horns, are preferred by the dairy farmers. Yorkshire supplies most of the cows used in the London dairies. Their average yield of milk may be estimated at from 22 to 24 quarts a day, but it does not yield a proportionate quantity of butter. Sheep of all varieties, and stock very large, supposed to amount to about 1,200,000 head, producing annually about 28,000 packs of wool. Many hogs are kept, and Yorkshire hams are celebrated in all parts of the country. Property in the N. and W. ridings very subdivided; but in the E. riding it is less subdivided than in most parts of England, and many families in this riding have held their estates for centuries. Farms of all sizes; but the majority seem to be unusually small. Most part of these farms are held from year to year, or by tenants at will; and, notwithstanding the statements that have been made to the contrary, we have no doubt that this species of tenure, by diminishing the security of the farmer, has operated in no ordinary degree to retard the progress of improvement. Farm-houses and buildings for the most part rather indifferent. Average rent of land, in 1810, 16s. 7½d. an acre.

The W. riding of this county stands in the very first rank as a manufacturing district. Leeds, Bradford, Huddersfield, Halifax, and Wakefield are the great seats of the woollen manufacture; flax-spinning is extensively carried on at Leeds; and the hardware manufactures of Sheffield rival, and in some departments, as that of cutlery, far surpass, those of Birmingham. There are extensive iron-works at Rotherham; and latterly the iron-works of Yorkshire have made considerable progress. Their total produce in 1839 was estimated by Mr. Scrivenor at about 90,000 tons, though we incline to think that this is beyond the mark. Cotton manufactures have been established at Easingwold, and in some other parts of the W. Riding. The manufactures in the other ridings are but of trivial importance. The valuable beds of coals found in the vicinity of Leeds, Sheffield, Bradford, Wakefield, &c., have, no doubt, been the principal source of their prosperity. Besides coal and iron, Yorkshire has mines of lead, and veins of copper; alum works were established near Whitby in the reign of Elizabeth, and are still worked (*see WHITBY*); and there are in various places excellent limestone and freestone quarries. Principal rivers Ouse, Swale, Ure, Wharfe, Aire, Calder, Don, Derwent, Hull, and Esk; the waters of all these, except the last, being poured into the great estuary of the Humber. The canals, particularly in the W. Riding, are numerous, and some of them are of great importance; and the principal towns are now, also, connected with railways. The county is divided into wapentakes and liberties, and contains 613 parishes. It sends 39 members to the House of Commons, viz. six for the county, being two for each riding; two each for the city of York, and the boroughs of Leeds, Sheffield, Hull, Beverley, Bradford, Halifax, Doncaster, Pontefract, Ripon, Knaresborough, Malton, Richmond, and Scarborough; and one each for the boroughs of Huddersfield, Whitby, Wakefield, Northallerton, and Thirsk. Registered electors for the N. Riding, in 1839-40, 11,911; for the E. Riding, 7496; and for the W. Riding, 30,122. Sum expended for the relief of the poor, in 1839, N. Riding, £53,642; E.

Riding, £67,539, W. Riding, £290,204. Total value of real property assessed to the poor, in 1840-41, in the N. Riding, £1,011,885, E. Riding, £1,111,807, and W. Riding, £3,324,882. Total amount of money levied for poor-rates for the county during the year ended Lady-day, 1814, £468,947.

York (an. *Eboracum*), an ancient and celebrated city of England, being, under the Romans, the capital of Britain, and at present the second city of the kingdom in respect of rank, though not of importance. It is a county of itself, and a parliamentary and municipal borough, locally situated near the centre of the county York, of which it is the capital, at the junction of the N. E., and W. Ridings; on the Ouse, at the confluence of the Foss, 22 m. N. E. Leeds, 33 m. N. W. Hull, 170 m. N. N. W. London, and 160 m. S. S. E. Edinburgh. Lat. 53° 57' 45" N., long. 1° 4' 34" W. The area of the old parliamentary borough and city comprised 2720 acres, and had in 1831 a population of 26,260. But by the late act, some additions were made of parts of the townships of Clifton and Heworth on the N., and of Fulford on the S. E., to the parliamentary borough, which is nearly co-extensive with the municipal borough, comprising, in part or wholly, 36 parishes, with some extra-parochial districts.

The city is enclosed by its ancient walls, supposed to have been erected by Edw. I., about 1280; they are flanked with numerous towers, and having been repaired and renovated in 1831, form a most delightful promenade, extending round the greater part of the city. They are pierced by five principal gates, termed bars, and by five smaller gates, or posterns; some of the former being remarkable structures. The Ouse and the Foss traverse the interior of the city, uniting at its S. extremity. The Foss is crossed by four bridges, and the Ouse by a single bridge, a handsome structure of three arches, constructed between 1810 and 1820, at a cost of £80,000. The span of the central arch is 75 ft., that of the other arches 65 ft. each; the total width of the bridge within the parapet is 40 ft. Handsome flights of steps at each end conduct to spacious quays on both sides the river, called the King's and Queen's straits, to which vessels of 90 tons may be moored.

York consists of several parallel lines of thoroughfare, running N. and S., crossed by others, which are generally shorter and more irregular, in an opposite direction. The principal of the former, nearly 2 m. in length, consists of Bootham, Petergate, Colliergate, Walmgate, &c., with their continuations. The line crossing it, and composed of Micklegate, Ousegate, Pavement, St. Saviour's-gate, &c., is almost as long. In the centre of the city is a fine broad open space called Parliament-street, terminating at one end in Sampson-square; and at the other end in the Pavement, the site of the corn, poultry, and other markets; and wool and leather fairs are held in Peaseholme Green, an open space in the E. part of the city. There are a few other open spaces in the heart of the city, as St. Helen's square, &c.; but none of them deserves any particular notice. York has been much improved and modernized of late years, but it still preserves an air of antiquity in its narrow streets and old-fashioned houses. Many of the latter formerly overhanging the streets, the upper stories projecting beyond the lower; but a good many of these have been taken down, and buildings in a modern style have been erected in their stead. Some of the streets also have been widened, and the city generally is well paved, and lighted with gas. In consequence of the rise of Liverpool, Manchester, &c., the increasing importance of many of the large towns of Yorkshire, and the greater facilities of communication between the different parts of the kingdom, York no longer enjoys that pre-eminence in the N. she possessed in the earlier part of last century. Still, however, she is not declining in any respect; but is, on the contrary, increasing in size. In the outskirts many substantial and even superior buildings have been recently erected; and the city is extending itself nearly in an equal degree in almost all directions. To the N. E. of the town was formerly an open space known by the name of Heworth moor. In 1817 this was enclosed; and in this neighbourhood a great number of substantial and excellent houses have been built since the period of the enclosure. Here also many market gardens are cultivated; and altogether the district is thriving and populous, and presents undoubted testimony of progressive and prosperous industry. (*Bound. Report*.) On the W. of the Ouse along the road from Leeds to the "Micklegate" are several good houses, many of which have been recently built, and are occupied chiefly by persons who have either retired from business, or are engaged in business in the older part of the town; the number of these houses is constantly increasing. The parishes beyond the Foss, through which the road to Hull passes, contain for the most part a population of a poor description. (*Mun. Corp. Rep.*)

York minster, or cathedral, is the finest edifice of its kind in the kingdom. It stands in the N. part of the city, and, except on its N. side, where a considerable space of ground has been cleared, is closely hemmed in by mean-looking

## YORK.

buildings. The present edifice, said to have been raised on the site of a church originally founded by Edwin, king of Northumberland, in the 7th century, was principally erected during the 13th and 14th centuries. It is without cloisters, and built in the form of a cross; consisting internally of a nave and two aisles; a transept, with aisles and a lantern in the centre; a choir, with aisles, and vestries or chapels on the S. side; and a chapter-house, with a vestibule, on the N. side. Its principal measurements are as follow:—length, internally, 524½ ft. (being greater than that of any other cathedral in England, except Winchester); internal length of transept, 222 ft.; length of nave, 264 ft.; do. of choir, 131 ft.; height of both, 99 ft.; breadth of nave, 109 ft.; height of great tower, 234 ft.; height of W. towers, each 196 ft. (*Stranger's Guide to York*, p. 103.)

This magnificent structure has a portion of all the styles of English architecture; but the Norman only appears in a fine crypt, under a part of the choir, which reduces the general appearance to the three later styles; of these, the transepts are early English; the nave and arches supporting the great tower are decorated; and the choir and upper part of the great tower are perpendicular. (*Rickman's Gothic Architecture*.) The W. front has been compared to that of the cathedral of Rheims for richness, sublimity, and beauty of architectural design. It is divided into three compartments, by two massive graduated buttresses enriched on every face with tabernacle-work, and the elevated battlemented gable is covered with ornamental tracery of the most florid kind. There are three entrances in this front; over the central of which is the unrivalled W. window, divided into eight portions by upright mullions, which in the upper part beautifully diverge into the leafy tracery peculiar to the 14th century. The magnificent towers which flank this side exactly correspond; they are supported by buttresses, and have at their summits eight crocketed pinnacles connected by a battlement. Almost the whole of the W. front is filled with niches, but these, with few exceptions, are empty. The S. side, though finished less elaborately than the W. front, is very imposing. The porch in the S. transept is the most usual entrance to the church, and is deeply recessed by numerous mouldings; over it is a beautiful margold window, and the gable is surmounted by an enriched pinnace. The N. side is in a similar style to the S., though finished in a plainer manner; and in its transept is the remarkable stained glass window termed the "five sisters." The E., like the W. front, is in three grand divisions separated by buttresses, the central of which is wholly occupied by a magnificent window. Like the W. front also, it is covered with niches, though only a very few of the statues formerly occupying them now exist. On this front the influence of time is very perceptible. The central tower, 234 ft. in height, is probably unfinished. It has two large windows, with two tiers of mullions, in each of its four sides. But it wants a spire; and when contrasted with the W. towers, has a heavy appearance.

The interior of the minster corresponds in beauty and grandeur with the exterior. A careful restoration of the cathedral in most of its parts had been completed, when, on 24 February, 1839, it was set on fire by a lunatic; the conflagration thence ensuing destroyed the fine organ, and all the woodwork and roof of the choir. Another destructive fire broke out on the 20th of May, 1840, in the S.W. tower, by which its fine ring of 10 bells and the clock, with part of the roof of the nave, were burnt. These injuries are now (1842) in the course of being completely repaired: the choir was renovated after the fire of 1829, under the superintendence of Sir R. Smirke. The new roof is wholly constructed of teak, presented by government; and is covered with lead procured from the mines of the Greenwich hospital estates. The remarkable stone screen, which separates the choir from the nave, stands in its original position, and is of a most gorgeous and florid style, ornamented with 15 statues of the kings of England, from William I. to Henry VI., all of which, except the last, are of ancient sculpture. The new organ, placed above this screen, and presented by the late earl of Scarborough, is of the most superb description; and has some pipes 32 ft. in length. A great deal of fine stained glass, many sculptured coats of arms, and the tombs of many of the archbishops of York, attract the visitor's notice in the interior; though, on the whole, this cathedral is less rich in monuments than many others in the kingdom. From the N. transept, a vestibule leads to the chapter-house; this is an octagonal building, 63 ft. in diameter, and 67 ft. 10 in. in height, supported on the outside by eight massive buttresses. "The more minutely," says Rickman, "this magnificent edifice is examined, the more will its great value appear. The simplicity and boldness, and at the same time the great richness of the nave, and the very great chastity of design and harmony of composition of the choir and great tower, render the building more completely one whole than any of our mixed cathedrals; while the exquisite beauty of the early character of the chapter-house,

and its approach, forms a valuable link to unite the early English transepts and the decorated nave. This chapter-house is by far the finest polygonal room without a central pier in the kingdom, and the delicacy and variety of its details are nearly unequalled. Too much praise cannot be given to the dean and chapter for their careful restoration of every decayed portion. By this restoration the whole of the W. front may be considered in as good a state as when first erected; a considerable portion of the S. side is also restored." (*Gothic Architect*, p. 265.) The vestries on the S. side of the church contain, among many other antiquities, a chair in which several of the Saxon kings were crowned, and which is said to be older than the cathedral itself; and the drinking horn of Ulphus, a Saxon prince of Deira, presented to the cathedral in 1036, with a large extent of country to the E. of York, still in the possession of the see. The library is a short distance from the cathedral on the N. side. (*Winkie's Cathedrals; Guide to York*, &c.)

The gross annual income of the see of York amounted, at an average of the three years ending with 1831, to about £13,800, and the nett income to £12,629. The chapter consists of a dean and four canons residentiary, sharing an income of £1352 a year, and 26 prebendaries having separate revenues. (*Eccle. Rev. Report*.) The archbishop of York has the title of primate of England, with the privilege of crowning the queen-consort, and ecclesiastical authority over the province of York, comprising the sees of York, Durham, Carlisle, Chester, Ripon, and Sodor and Man.

Previously to the dissolution of the religious houses by Henry VIII., besides 17 chapels, 16 hospitals, and nine religious houses, there were in the city 41 parish churches, but of these last only 23 now remain. Many of these would be worthy of notice elsewhere; but they sink into insignificance after the cathedral. St. Michael-le-Belfrey, in the minster-yard, is the largest and most elegant, and with St. Martin's in Coney-street is in the late perpendicular style. All Saints, North-street, and St. Mary's, Castle-gate, have towers and lofty spires, and are mostly perpendicular with some earlier portions; St. Denis, St. Lawrence, and St. Margaret, have good Norman doors, with portions of later date; and St. Mary Bishopophill, the Elder, has portions of good early English, and decorated work, amidst various alterations and insertions. In many of the churches are considerable quantities of old stained glass. (*Rickman*, p. 266.) All Saints in the Pavement is of very ancient foundation; and Drake says that its N. side is almost wholly built out of the ruins of *Eboracum*, though other parts of the edifice are quite modern. A large lamp still preserved here used to be hung at the summit of this building, as a beacon for travellers at night through the forest of Galtres, which extended from Bootham-bar a considerable distance N. of the city. Most of the livings of these churches are rectories or vicarages in the gift of the crown or the dean and chapter of York; the most valuable are those of St. Cuthbert, worth £233 a year nett, and St. Mary Bishopophill, the Elder, worth £226 a year, both in the gift of the crown; St. Martin's, Micklegate, worth £243 a year, is in the gift of a private family. (*Eccle. Rev. Rep.*, &c.)

The remains of St. Mary's abbey, originally founded by William Rufus in 1068, and refounded in 1270 for black monks of the Benedictine order, are very interesting. The abbott was miltred, and had a seat in parliament; and at the time of the dissolution the revenues of the abbey amounted to £2085 1s. 3d. a year. The buildings were for the most part destroyed between 1701 and 1717, and their materials used for rebuilding the castle of York and St. Olave's church, and repeling Beverley minster. Almost the only parts remaining are a gateway, and the N. wall of the abbey church, 371 ft. in length, having fine light Gothic window-arches, with highly finished carved capitals. Mr. Rickman says that the remaining part of the church furnishes the richest and most beautiful specimens of transitions from early English to decorated that remain for examination; but being entirely exposed, it is fast decaying. The abbey had an extensive and strongly fortified prebent without the ancient walls of the city; and some of its walls and towers, forming an extraneous portion of the old city defences, may still be seen between Bootham-bar and the Ouse. The remains of St. William's college, founded by Henry VI., exist in a street near the cathedral. St. William's chapel stood on the old bridge over the Ouse, and was consequently taken down with that structure. The cloisters of St. Leonard's and St. Peter's hospitals, curious remains of the architecture of the time of William I. and II., are now used as wine vaults.

The dissenters, who form a numerous and respectable body in York, have at least a dozen places of worship; the oldest of which is the Presbyterian (Unitarian) chapel, in St. Saviour-gate. The Wesleyans have an elegant new chapel in the same street, with a massive Ionic portico, &c., besides three other chapels. The Independents have two

## YORK.

chapels, one of which (Salem chapel), erected at the end of St. Saviour-gate, is a large and handsome edifice. There are also meeting houses for Primitive and other Methodists, and Friends; a fine Roman Catholic chapel, a nunnery, and chapel outside Micklegate-bar, &c.

York castle, towards the S. extremity of the city, between the Ouse and Foss, near their confluence, occupies a space of nearly four acres. It was originally built by William the Conqueror, who also erected another fortress at York, on the other side of the Ouse. But only a small portion of the original structure of the castle remains, except Clifford's tower, a keep added by the Conqueror to the rest of the edifice, and erected upon an artificial mound, which had probably served for the site of a Roman fortress. York castle, which was long garrisoned for the king in the civil wars, is not now a defensive military post, but has been converted into the county prison and hall. The basilica, or county hall, on the W. side of the great area, is entered by a portico, supported by Ionic columns, and internally divided into civil and criminal courts, with handsome rooms, for the use of the grand and petit juries, counsel, &c. The building, on the E. side of the area, which is uniform in design with the courthouse, is chiefly appropriated to female prisoners. Between 1821 and 1836, a new prison was built here, at an expense of £203,530, on the panopticon principle, with eight airing courts, the whole being surrounded by a lofty stone wall, 35 ft. high. This building is said to be the most excellent of its kind. In 1838-39, the commitments to York castle amounted to 632. (*Jail Returns*, 1840.) The city jail and house of correction is on the W. side of the Ouse; its outer wall encloses an area of nearly three fourths of a mile in circuit: it is appropriated partly to prisoners before trial. Near it is the *vetus ballium*, or old baile, a mound corresponding with that on which Clifford's tower is built, having probably had the same origin and purpose.

Most of the other edifices of public interest, are in the N. part of the city. The mansion-house, a large and handsome edifice, erected in 1725, has in front a rustic basement supporting an Ionic colonnade, with a pediment on which are the arms of the city. The state-room, 49½ ft. in length by 27½ ft. in breadth, has paintings of William III., George II. and IV., and of several noblemen and gentlemen. The guildhall, behind this edifice, built in 1446, comprises one of the finest Gothic halls in the kingdom, 96 ft. in length, 43 ft. in width, and 29½ ft. in height, the roof being supported by 10 octagonal pillars on stone bases. In the windows are some fine specimens of stained glass, and over the entrance is a full-length statue of George II. In this hall, the lords-president of the north formerly held their court; and here also the Scotch received the £300,000 paid them by parliament for the assistance they afforded against Charles I. At the end of the hall is the city assize and sessions court; and adjoining, are the council chambers of the corporation. The assembly-rooms were erected, by subscription, in 1730, and are entered under a portico, resting upon light stone columns, supporting a balustrade. The walls are supported by 44 light and elegant Corinthian columns, with a beautiful cornice, the upper part of the building being of the composite order, and richly adorned. The rooms are lighted by 44 windows. The grand assembly-room is constructed from a design by Palladio, and measures 112 ft. by 40 ft. and 40 ft. in height. It was used for concerts till about 1825, when, being found too small, a magnificent concert-hall adjoining was built, 95 ft. in length, 60 ft. in breadth, and 45 ft. in height, capable of containing 1700 persons, 400 being accommodated in a gallery supported by cast-iron pillars. It is lighted with gas, and fitted up in a style of much elegance: its cost, including the purchase of the ground, amounted to £9400. The theatre, built by Tate Wilkinson, in 1765, and recently altered externally in the Elizabethan style, is extremely commodious. The Yorkshire Philosophical society, founded in 1822, obtained, in 1826, a grant of three acres of land, part of the site of St. Mary's abbey, from government, for a suitable building, botanic garden, &c. The museum, built between 1827 and 1830, is an elegant edifice, with a front towards the Ouse, 200 ft. in length, and has a spacious hall, a library, a theatre for lectures, with large collections in geology, mineralogy, zoology, comparative anatomy, a chemical laboratory, &c. The affairs of the society are conducted by a council of 12 members, and officers elected once a year. Annual subscription of members £2 (ladies, £1), with £5 entrance. The York Subscription library, with 17,000 vols., occupies a spacious suite of rooms in St. Leonard's-place; it is supported by about 400 members, who pay 10 guineas each on entrance, and 25s. a year afterwards. There are other subscription, and several good private circulating libraries, with three news-rooms, at which the London, Edinburgh, and many provincial newspapers are taken in. Four weekly newspapers are published in York.

Outside Monk-bar is the county hospital, founded in 1749 by Lady Hastings, with (in 1842) an income of about £1400

a year. The building has a front of 75 ft., by a depth of 99 ft., and encloses a court measuring 26 ft. by 35 ft. It is remarkably well kept, and capable of accommodating 100 patients. Without Bootham-bar is a lunatic asylum, built by subscription in 1777, three stories in height, having a front 132 ft. in length, with extensive grounds, &c.; and about 1 m. from the city is the Retreat, an establishment of a similar nature under the careful management of the society of Quakers. Here, also, is a dispensary, founded in 1788; an eye infirmary, established in 1831, and various medical and other charities for the benefit of the poor. The educational establishments are on a very extensive scale, at least in so far as elementary and the more ordinary branches of instruction are concerned. A masters' school, in connection with the York Diocesan society, occupies the extensive premises in Monkgate, formerly used as the Unitarian college. This last, the chief seminary of the Unitarians in England, was removed from Manchester to York in 1803, but has lately been again removed to Manchester. Here also are national schools, established in 1812, in which above 700 children of both sexes are educated; British schools for about 200 boys and 300 girls; the blue-coat boys' and grey coat girls' schools, established in 1705, having an income of about £1500 a year; Haughton's charity school, for the education of 20 poor children of the parish of St. Cruz; the spinning school, established by two ladies in 1782, where about 60 girls are instructed in reading, knitting, and sewing, and principally clothed; with Sunday schools, &c.

The cavalry barracks on the Fulford road, the manor-house at different times a royal palace and mint, and Bishopthorpe palace, the seat of the archbishop, about 3 m. S.E. from the city, are the principal edifices which remain to be noticed. The grounds of the last are frequently resorted to in summer by the inhabitants, whose principal public promenade in the city is the New walk, a gravelled terrace planted with elms, &c., extending from the neighbourhood of the castle for nearly 1 m. along the Ouse. Near the New walk is a cold bath; and hot, cold, and vapour-baths are established in Lendal, for the accommodation of the public at large. Swimming baths have also been recently erected.

The city of York claims to be a corporation by prescription. Its earliest extant charter is one of Henry II., without date; but its governing charters before the Municipal Reform Act were of the 16th Charles II. and the 10th George IV. By the latter, the corporation officers were the mayor, 12 aldermen, and the two acting and the former sheriffs, the recorder, city counsel, town clerk, coroners, 72 common councilmen, &c., who sat, as in London, in two separate courts. All the corporate officers were freemen, the freedom of the city being acquired by birth or apprenticeship to a freeman within the city liberty, and by gift or purchase from the upper house, the price of purchase varying from £25 to £150. Under the Municipal Reform Act, the borough is divided into six wards, and is governed by a mayor, recorder, 12 aldermen, and 36 councillors, six from each ward. The chief magistrate has the title of lord mayor, conferred by Richard II., in 1389, which title he consequently enjoyed before the chief magistrate of the metropolis. York sent two members to the House of Commons in the 49th of Henry III., and has continued to do so regularly from the time of Edward I., the right of election having been formerly vested in the corporation and freemen. The greatest number of voters within the 30 years previously to the parl. Reform Act, was 3715 polled in 1830. Registered electors in 1839-40, 3326. The election for the N. riding of the county of York is held here. Courts of assizes for the county and the city are also held here twice a year, besides quarter sessions, a court of pleas, and petty sessions twice a week; there were formerly several other courts, now obsolete. (*Mun. Rep.*, Appendix, iii.) Corporation revenue, in 1840, about £3000. The corporation of York had exclusive jurisdiction over the Ainsty, a large district comprising about 35 towns and villages, from the time of Henry VI. till a late act annexed the Ainsty to the W. riding of the county.

Under the Romans, York was, no doubt, the commercial emporium of the N. part of the island, and it appears to have been a city of some commercial importance in the time of Edward III., who established a woollen manufacture in the city, which continued to flourish for a lengthened period. At present its trade is comparatively small for its size; and the largest amount of capital now employed in any one branch by the citizens is supposed to be in the drug trade. Considerable business has, however, been done lately in the iron trade, and there are several large foundries: printing, brewing, and comb making are also extensively carried on. The glass manufacture was established at York at a somewhat early period; and phials and flint glass wares are still made here. Linen cloth, sack, twine, leather, gloves, jewellery, paper-hangings, fringe, musical instruments, brass wares, tobacco pipes, &c., are among the other goods made at York. Many guilds or trading companies formerly existed, but all of them except three appear to be dis-

## YORK.

solved. The company of merchant adventurers of York is an ancient corporation by prescription, now consisting of about 120 members, under a governor, deputy governor, &c., having property yielding £200 a year, with a chapel and hall, and a hospital, in Fosgate. The merchant tailors' company, incorporated by charter 14 Charles II., consists of from 30 to 35 members, with exclusive privileges in the city and an income of £136 a year. The other company is the goldsmiths', authorized by act of parliament. The Ouse trustees have lately spent large sums on the improvement of the river navigation; and steamers now ply to and from Hull at all times of the tide. Coals are brought to the town by water and by railway. A decided increase of trade has been experienced since the completion of the railways, by which York communicates with Newcastle, Durham, Carlisle, &c., northward, and with Leeds, Hull, the Liverpool lines, and other parts to the S. The York station of these railways is an elegant building, immediately within the walls near Micklegate. Large sales of cattle and horses take place at fairs held here once a fortnight, besides which there are monthly fairs for leather; many others in the year for flax, wool, &c. Markets, Tuesday and Saturday, the latter chiefly for corn. A new cattle-market was opened in 1828 outside Fishergate. Races, which are extremely well attended, are held three times a year on Knavesmire, a large plain about 1 m. S. from the city, where is a spacious grand stand. Four joint-stock banking companies and two private banks are established in the city.

The society of York is superior to that of most provincial towns. From its being the capital of the most extensive county in the kingdom, it is the residence of a greater number of gentlemen connected with the law and the administration of public affairs. It is necessarily, also, the residence of a number of gentlemen connected with its cathedral and different ecclesiastical establishments. And in addition to its fixed inhabitants, it is the winter residence of many of the provincial gentry attracted hither, by its superior society, amusements, facilities for education, &c.

*Antiquities and History.*—York, though successively the residence of Hadrian, Severus, Geta and Caracalla, Constantius Chlorus, Constantine the Great, &c., has few striking Roman antiquities. Such as do exist comprise a remarkable multangular tower, a long wall, with altars, *paterae*, tombs, monuments, and the foundations of ancient buildings. The *palatium* of the Roman emperors is supposed by Drake to have occupied several acres near the cathedral, extending from Christchurch through all the space between Goodramgate and St. Andrewgate to Aldwark. Not far from this, in St. Cuthbert's cemetery, many Roman sepulchral remains have been found. Outside Micklegate-bar, a Roman vault, with a perfect skeleton, was opened in 1807; and a tessellated pavement was discovered within the same bar in 1814. Severus died at York, A.D. 212; and his funeral obsequies would appear to have been performed on some heights a little W. of the city, still called Severus' hills. Constantius, who died in 307, is traditionally said to have been buried in the parish church of St. Helen's. Under the Saxons, York was successively the capital of the kingdoms of Northumberland and Deira. It was taken, and its neighbourhood devastated by William the Conqueror in 1069. Several parliaments have been held in York, the first being that summoned by Henry II. in 1160. In 1540, Henry VIII. established in this city an officer called the lord president of the north, and a council with very extensive powers which existed till the civil wars, when York was frequently a principal station and residence of Charles I.; it, however, surrendered to the parliament in 1644. (*Bound., Munic., and other Parl. Repts.; Bellerby's Guide to York; Rickman's Archit. in England; Private Information, &c.*)

YORK, river, Va., is formed by the junction of Pamunkey and Mattaponi rivers; and enters Chesapeake bay between York and Gloucester counties. The lower part forms a bay, generally 2 or 3 m. wide, but at Yorktown it is contracted to the width of 1 m., where it forms one of the best harbours in the state. It is navigable 20 m. above this for large vessels. It is about 120 m. long to its remote sources.

YORK, county, Me. Situated in the S.W. part of the state, and contains 818 sq. m. Bounded S.E. by the Atlantic, along which is a number of good harbours, and several lighthouses. It contained in 1840, 5010 neat cattle, 69,477 sheep, 14,391 swine; and produced 55,886 bushels of wheat, 23,140 of rye, 230,650 of Indian corn, 6046 of buckwheat, 40,670 of barley, 102,413 of oats, 1,123,441 of potatoes, 26,084 of sugar. It had 245 stores, 22 fulling-mills, seven woollen factories, five cotton factories with 25,736 spindles, 90 grist-mills, 137 saw-mills, two oil-mills 101 tanneries, six potteries, four printing-offices, four weekly newspapers; total capital in manufactures \$1,604,425. Pop. 54,034. Capital, Alfred.

YORK, county, Pa. Situated in the S., toward the E.,

## YORKSHIRE.

part of the state, and contains 864 sq. m. Bounded N.E. by Susquehanna river, N. by Yellow Breeches creek. Drained by Codorus and Conewago creeks. It contained in 1840, 34,425 neat cattle, 36,347 sheep, 56,297 swine; and produced 357,515 bushels of wheat, 363,886 of rye, 600,822 of Indian corn, 12,999 of buckwheat, 1714 of barley, 597,044 of oats, 172,246 of potatoes, 162,748 pounds of tobacco. It had 159 stores, 17 lumber-yards, seven fulling-mills, 10 woollen factories, seven flouring-mills, 132 grist-mills, 104 saw-mills, four paper-mills, nine oil-mills, 53 tanneries, 216 distilleries, four breweries, nine potteries, six printing-offices, seven weekly newspapers; two academies, 50 students; 130 schools, 3749 scholars. Pop. 47,010. Capital, York.

YORK, county, Va. Situated in the S.E. part of the state, and contains 150 sq. m. Bounded N.E. by York river, S.E. by Chesapeake bay. It has six schools, 170 scholars. Pop. 4720. Capital, Yorktown.

YORK, district, S.C. Situated in the N. part of the state, and contains 700 sq. m. Bounded S.W. by Broad river, N.E. by Catawba river, and drained by their tributaries. It contained in 1840, 13,695 neat cattle, 7049 sheep, 24,021 swine; and produced 64,021 bushels of wheat, 44,738 of rye, 478,833 of Indian corn, 44,148 of oats, 12,175 of potatoes, 5200 pounds of rice, 3942 of tobacco, 866,594 of cotton. It had 14 stores, six flouring-mills, 21 grist-mills, 15 saw-mills, three tanneries, 24 distilleries, one pottery, one printing-office, one weekly newspaper; one academy, 33 students; 29 schools, 679 scholars. Pop. 11,383, 11,449; slaves, 6825; free coloured, 109; total, 18,335. Capital, Yorkville.

YORK, p. t., port of entry, York co., Me., 45 m. S.W. by S. Portland, 92 m. S.W. Augusta, 502 W. Bounded S.E. by the Atlantic, into which York river enters by a broad estuary. Incorporated in 1653. Agamenticus mountain lies in its N.E. part, a noted landmark for seamen. The village is situated on York river, 1 m. from the ocean, and has a harbour which admits vessels of 250 tons. It was originally laid out for a large city, with streets crossing each other at right angles, but has not equalled the designs of its early founders. On Cape Neddock, a rocky promontory on the S. side of a river of the same name, is a light-house, and on this river, a mile from the ocean, is a village, with a harbour, navigable at full tides only. The town has 11 stores, two fulling-mills, five grist-mills, five saw-mills; 886 scholars in schools. Pop. 3111. Tonnage of the district in 1843, 2072 tons.

YORK, p. t., Livings on co., N. Y., 238 m. W. Albany, 354 W. Bounded E. by Genesee river, and drained by its tributaries. It has 12 stores, one woollen factory, two furnaces, three grist-mills, five saw-mills, two distilleries; 17 schools, 1039 scholars. Pop. 3049.

YORK, t., York co., Pa., 5 m. S.W. York borough. It has two grist-mills, one saw-mill, two tanneries. Pop. 1294.

YORK, p. b., capital of York co., Pa., 24 m. S. Harrisburg, 90 W. Situated in Spring Garden and West Manchester townships, on Codorus creek, 11 m. from Susquehanna river. It is regularly laid out, with streets crossing each other at right angles, and contains a spacious and elegant new courthouse, a jail, a bank, an academy, a county lyceum, with a cabinet of mineralogy and Natural history, which sustains scientific lectures, and 10 churches belonging to Lutherans, German Reformed, Presbyterians, Moravians, Episcopalians, Methodists, Friends, Roman Catholics, and African Methodists, 38 stores, 11 lumber-yards, one woollen factory, five tanneries, three breweries, four printing-offices, five weekly newspapers, three of which are in German; two academies, 50 students, 10 schools, 647 scholars. Pop. 4779, and including the adjoining villages of Frystown and Buttstown, 5415. The place is supplied with excellent water from a spring near the foot of the slate ridge on the S. The county poor-house is in the vicinity of the village. The creek is made navigable to the Susquehanna river by 8 m. of polds and 3 of canals, with nine locks. It is connected with Philadelphia and Baltimore by railroads. It has good turnpike roads in various directions. The United States congress, when driven from Philadelphia, removed to this place in the Revolutionary war; and Philip Livingston, one of its members, died and was buried here, in the cemetery of the German Reformed church.

YORK, t., Athens co., O. Drained by Hoekhocking river, on which is Nelsonville village. It has 10 schools, 191 scholars. Pop. 1601.

YORK, t., Belmont co., O. Bounded E. by Ohio river. Captina creek affords water-power. It has one school, 35 scholars. Pop. 1294.

YORK, p. t., Washtenaw co., Mich., 46 m. W. Detroit, 511 W. It has one store, one flouring-mill, one grist-mill, four saw-mills. Pop. 1146.

YORKSHIRE, p. t., Cattaraugus co., N. Y., 278 m. W. Albany, 341 W. Drained by Cattaraugus creek and its tributaries. It has one church, two stores, one fulling-

## YORKTOWN.

mill, two grist-mills, six saw-mills, three tanneries. Pop. 1252.

YORKTOWN, p. t., Westchester co., N. Y., 112 m. S. Albany, 275 W. Drained by Croton river. It has 10 schools, 201 scholars. Pop. 2819.

YORKTOWN, p. v., port of entry, and capital of York co., Va., 70 m. E.S.E. Richmond, 185 W. Situated on the S. side of York river, opposite to Gloucester. It contains a courthouse, jail, county offices, and 40 dwellings, some of them in a dilapidated condition, and about 300 inhabitants. It is memorable as the place where Lord Cornwallis surrendered the British army to Gen. Washington, Oct. 19th 1781, which event terminated the Revolutionary war.

YORKVILLE, v., New-York co., N. Y. Situated on Harlem railroad, 5 m. N. of the city hall, through which the cars ply many times daily. The railroad here passes through a deep cut, and immediately N. of the village is a tunnel, 595 ft. long, 24 wide and 21 high to the crown of the arch, cut through solid rock, which supercedes the necessity of masonry, and which cost \$90,000. In the vicinity of the village is the receiving reservoir of the Croton water-works, containing 35 acres, enclosed by a high and substantial wall. It is a little remarkable that, in the hottest weather in the summer, the water in this reservoir is as cool as when it enters from the aqueduct.

YOUGHALL, a par. bor. and seaport town of Ireland, prov. Munster, co. Cork, on the W. side of the estuary of the Blackwater, immediately within its mouth, 27 m. E. by N. Cork. Area of modern par. bor., 212 acres. Pop. in 1831, 9600. It is built close to the water's edge, along the foot of a pretty steep hill, and consists principally of a main street, extending for about 1 m. parallel to the strand, and of various other smaller streets and lanes. It was formerly surrounded by walls; and these in part remain, and form, on the summit of the hill to the W., the boundary of the town. Of 1200 houses comprised within the par. bor., in 1831, 1000 were slated, and 200 thatched; the greater proportion of the latter are in the suburbs, which are "large and bad," extending in every direction up the hill. The principal public building is the parish church, a large Gothic edifice; in its immediate vicinity are the ruins of an old abbey, one of the windows of which "is extremely beautiful, and quite entire. The churchyard, too, is one of the largest and finest, in point of situation, I have ever seen. It is interspersed with lime and other trees; and like everything else about Youghall, has many remnants of antiquity, old tombs, old ivied moss-grown stones, and luxuriant weeds." (*Inglist*, i. 178.) It has, also, a chapel of ease, several Roman Catholic chapels, and meeting-houses for various classes of dissenters, an infirmary, a dispensary, a barrack for infantry, numerous public schools, a convent, the college, now in a neglected state, the property of the duke of Devonshire, a courthouse, custom-house, fever and lying-in hospitals, &c. The house occupied by Sir Walter Raleigh is still preserved in good repair, and with but little change.

Youghall sent two members to the Irish House of Commons; and it has sent one member to the Imperial House of Commons from the era of the union downwards. Registered electors for 1839-40, 670. Under the Irish Municipal Reform Act, 3 and 4 Victoria, cap. 108, the corporate body is styled the mayor, bailiffs, burgesses, and commonalty of Youghall.

The manufactures of the town are inconsiderable, consisting only of two small potteries and brick-works. It is too near Cork to have much foreign trade; but owing to its situation on a fine navigable river, it is the emporium of a considerable tract of country. The great articles of export consist of grain and meal, provisions, cattle, and pigs, their aggregate value having amounted, in 1836, to £215,316. The principal articles of import are timber and coal. The bar at the river's mouth has only 4 ft. water at ebb tide, and it is inaccessible for vessels drawing more than 12 or 13 feet water, except at high springs. Youghall is included in the port of Cork, but its shipping is inconsiderable. Postage, in 1830, £1114; ditto, in 1836, £1299. Branches of the bank of Ireland and the Provincial banks are established in the town. The beach is fine and the town is well fitted for sea-bathing; though, in this respect, but little advantage has been taken of its capabilities.

It is believed, apparently on good grounds, that the introduction of the potato cultivation into Ireland dates from 1610, when Sir Walter Raleigh sent a few to be planted on his estate in the vicinity of this town! But such has been the progress of this exotic, that it now furnishes, and has for a lengthened period furnished more than three fourths of the food of the people of Ireland; and its astonishing increase has been at once a cause and a consequence of the equally astonishing increase of population in the island. (See *Boundary Report*; *Railway Report*; *Commercial Dict.*, art. *Potatoes*, &c.)

YOUGHOGHENY, river, Va., Md., and Pa., rises in Preston co., Va., and flowing through Md. and Pa. enters

## YUCATAN.

Monongahela river, 18 m. S.E. of Pittsburg. It passes through the Laurel hills, and Chestnut ridge. The Ohiopey falls, about 30 m. from its entrance into Monongahela river, have a perpendicular descent of 30 ft., presenting, in high water, a grand and interesting appearance. It is navigable to these falls.

YPRES (Flenn. *Ypern*.) a fortified town of Belgium, prov. W. Flanders, cap. arrond. and two cnts., on the Yperlee, 29 m. S.W. Bruges, and 16 m. N.N.E. Lille; lat. 50° 51' 10" N., long. 2° 53' 4" E. In the 14th century it is said to have been nearly equal in population and importance to Bruges; whereas in 1836, it had only 15,964 inhabitants (*Heuschlingh*). It is well built, and, like most towns in Flanders, it has extensive water communications, being connected by canals with Nieuport, Bruges, &c.

The courthouse and cloth-hall occupy a vast Gothic building of the 14th century, surmounted by a fine tower. The cathedral, a Gothic edifice, has a painting attributed to Van Eyck; the tomb of Jansen, bishop of Ypres, and founder of the sect of Jansenists in the 17th century, &c. There are several other churches and chapels, four hospitals, an exchange, a royal college, &c. Ypres was formerly famous for its manufactures of woollen and linen cloths, and the fabric called *diaper* (originally *d'Ypres*) derives its name from having been originally made in this town. Linen yarn and lace are now the principal articles manufactured; but there are still some woollen and linen cloth factories at Ypres, with tanneries, bleaching and dyeing-houses, one or more salt refineries, &c. Ypres experienced many reverses in the wars of the 17th and 18th centuries. Under the French it was the capital of the dep. Lys. (*Vandermaelen, Dict. de Fland. Occident.*; *De Cloet*, &c.)

YPSILANTI, p. t., Washtenaw co., Mich., 30 m. W. by S. Detroit, 517 W. Watered by Huron river and Stony creek. The village is situated on the W. side of Huron river. It contains three churches, a Presbyterian, Methodist, and Episcopal, an academy, 10 stores, three flouring-mills, three saw-mills, one woollen factory, two carding machines, one iron foundry, one tannery, 300 dwellings and about 1500 inhabitants. The town contains 16 stores, one furnace, four flouring-mills, three grist-mills, nine saw-mills, one distillery. Pop. 2419.

YRIEX (ST.), a town of France, dep. Haute-Vienne, cap. arrond., on the Loue, a tributary of the Isle, 21 m. S.S.W. Limoges. Pop. in 1836, incl. comm., 6900. It owes its origin to a monastery founded here in the 6th century; and is old and ill built. It has a collegiate church, a curious Gothic edifice of the 12th century, four other par. churches, a hospital, a court of primary jurisdiction, a society of agriculture, &c., with manufactures of woollen stuffs, linen yarn, and porcelain, and 12 annual fairs. Here are some iron works, and works for the preparation of antimony: all the porcelain clay used in the china manufactory of Sévres comes from St. Yriex. (*Hugo*; *Guide du Voyageur*, &c.)

YSENGEAUX, a town of France, dep. Haute-Loire, cap. arrond., on a rocky and elevated site, 14 m. N.E. Le Puy. Pop., incl. comm., 7621. Though irregularly built, and *assez triste*, it has a good modern church, and is improving. It has no manufactures worthy of notice, its inhabitants being principally engaged in agriculture and cattle-dealing. (*Hugo*, &c.)

YUCATAN, the most E. state of the Mexican confederation, consisting of a peninsula, projecting northwards, between the Caribbean sea on the E., and the gulf of Mexico on the W., and between the 18th and 21st degs. of N. lat., and the 87th and 91st of W. long., having S. the states of Tabasco, Chiapa, Vera Paz, and the British territ. of Honduras; length, N. and S., about 250 m.; average breadth, 200 m. Area about 50,000 sq. m. The population has been estimated at about 500,000. The most striking accounts of the productiveness of this region have been frequently put forth in geographical works. But according to Mr. Ward, "Yucatan is one of the poorest states in the federation. On parts of it, maize, cotton rice, tobacco, pepper, and the sugar cane, are produced; with dye woods, hides, soap, &c. But the scarcity of water in the central parts of the peninsula, where not a stream of any kind is known to exist, and the uncertainty of the rainy season, render the crops very variable; and years frequently occur in which the poorer classes are driven to seek a subsistence by collecting roots in the woods, when a great mortality ensues in consequence of their exposure to a very deleterious climate. Yucatan has no mines. An active intercourse was formerly carried on with Havannah, which Yucatan supplied with Campeachy wood, salt, hides, deer skins, salted meat, and the *jenequen*, a plant from which a sort of coarse thread was made, and wrought up into sucking, cordage, and hammocks. This trade was cut short by the war; and as few foreigners had been induced to settle in Yucatan, the inhabitants have derived but little advantage from the late change of institutions. The receipts of the

## YUTHIA.

estates in 1826 amounted to 213,127 dolls., the expenditure was 207,199 do.; so that a small surplus revenue remained." (*Ward's Mexico*, ii. 390, 391.)

This state is divided into 15 departments; its chief towns are Merida, the capital, Valladolid, Bacalar, Campechy, and Vittoria; but none is of much importance. In 1829 it separated itself for a time from Mexico; and we incline to think that at present (1842) it is but little, if in any degree, dependent on the central government.

YUTHIA, the an. cap. of the kingdom of Siam, on the Menam, 40 m. N. Bangkok: it appears to have been formerly a place of much magnificence, but it has now fallen into decay.

YVERDUN (Germ. *Iferten*, an. *Ebrodunum*), a town of Switzerland, cant. Vaud, cap. distr., on the Thiele, at its mouth in the S. extremity of the lake of Neuchâtel, 17 m. N. by V. Lausanne. Population between 3000 and 4000. It is well built, consisting of three principal streets, with a handsome square, a new church, and town-hall, several bridges across the Thiele, &c. Its principal edifice is a castle, built in the 13th century, and which, from 1805 to 1825, served for Pestalozzi's central school, conducted by himself. Yverdun has a college, a public library, with a museum of antiquities, and a tolerable harbour on the Thiele. Its trade is brisk, it being the great dépôt for the wine of the canton exported northward. (*Ebel; Dict. Geog., &c.*)

YVETOT, a town of France, dep. Seine-Inférieure, cap. arrond., on the road between Havre and Rouen, 20 m. N.W. the latter. Pop. in 1836, ex. comm., 7923. It is situated on a bare and arid hill, destitute of any running water, the inhabitants being supplied from wells. It consists chiefly of one long street; but this has few good houses, and the rest of the town is very meanly built. It has, however, a planted promenade; and the surrounding country is fertile and populous. Yvetot is the seat of courts of primary jurisdiction and commerce, a chamber of manufactures, &c., and has manufactures of linen and cotton cloths, cotton velvet, handkerchiefs, hosiery, cutlery, and hardware. It has also a considerable trade in corn and sheep. Toward the end of the 13th century the Spanish, Italian, and other merchants used to proceed from Harfleur to Yvetot, where they conducted their chief mercantile transactions with the French; and, perhaps in the view of encouraging commerce, the fief of Yvetot was declared, in 1370, free of all feudal service to the French crown. Its lords soon afterward coined their own money, and assumed the title of king. The exploits of one of these petty monarchs form the subject of one of Beranger's national songs. (*Hugo, art. Seine Inférieure; Dict. Geog., &c.*)

## Z.

ZAANDAM, improperly SAARDAM, a town of N. Holland, on the Zaan, a tributary of the Y, by which it is divided into E. and W. Zaandam, 4½ m. N.W. Amsterdam. Pop. about 10,000. Mr. McGregor says, "We have only visited one place (Broek) so trim, quiet, and minutely clean. The streets are paved with clinkers, and daily washed; the houses are built of wood, and painted white and green, and their principal door, that of ceremony, is only opened at baptisms, marriages, and funerals. The dockyard, in which 300 vessels were built and repaired annually, has disappeared; its herring and whale fisheries have also vanished; but its vast number of windmills employed in sawing timber, &c., appear, with their dependent operations, to give full occupation to the inhabitants." (*Note Book*, i. 197, 198.)

At one period Zaandam ranked among the greatest naval arsenals in Europe; but the principal celebrity of the arsenal, and, indeed, of the town, is derived from the circumstance of Peter the Great having wrought in it as an ordinary ship carpenter during his visit to Holland in 1697. The hut which he occupied is still kept up, and has been visited by numerous distinguished personages, including Napoleon, Alexander, emperor of Russia, &c. (*De Cloet; Voltaire, Hist. de Russie*, partie i., cap. 9.)

ZACATECAS, a city of Mexico, cap. of the state of its own name, in a narrow valley, 290 m. N.W. Mexico. Ward estimated its population at 22,000, and that of its suburb, Veta Grande, at 6000. (*Mexico*, ii. 342.) At a distance, its numerous churches and convents give it a fine appearance, and it has many excellent houses; but its streets are narrow and filthy. Its markets appear to be abundantly supplied with fish, fruits, vegetables, &c. Gunpowder and some cotton fabrics are manufactured here; and Zacatecas is next to Guanajuato, the principal mining city, and one of the chief mints in Mexico. In the latter establishment, some years ago, 300 people were constantly employed. The machinery, of brass, and made in the town, was ponderous, and a great deal of labour was wasted; still, however, the coinage from January, 1821, to June, 1826, amounted to upwards of 17,570,000 dollars.

## ZANTE.

The state of Zacatecas, with an area of about 20,000 sq. m., and a population of 280,000, is one of the richest mining provinces in America. "As a mining district it differs materially from Guanajuato, for, in lieu of one great mother vein, it has three lodes nearly equal in importance, with many inferior lodes; upon all of which nearly 3000 pits or shafts have been opened." (*Ward's Mexico*, ii. 333.) N. and E. of Zacatecas, the country is divided into vast breeding estates, and is very thinly peopled. The state has no manufactures, except those of the capital, and a few in Aguas Calientes; the population living by mining and rural industry. After the capital, the principal towns are Sombreret, Fresnillo, Jerez, Pinos, &c., which, according to Mr. Ward, have a population of from 14,000 to 18,000 each.

-ZAFRA (an. *Segeda*), a town of Spain, in Estremadura, prov. Badajoz, 40 m. S.E. Badajoz; on the road between it and Seville. Pop. 7500. (*Miñano*.) It is regularly built, and has two squares surrounded with arcades, and many houses of a superior class. Among the latter is the magnificent residence of the dukes of Medina Celi. (See *Miñano*, x., 58.) The collegiate church is also a fine edifice, and several other churches are richly adorned. This town had formerly manufactures of gloves and jewellery; but these have decayed, and earthenware and leather are now the principal articles made at Zafra. It was taken from the Moors by Ferdinand III. in 1240. (*Dict. Geog., &c.*)

ZAMORA, a city of Spain, in Leon, cap. prov. of its own name, near the confines of Portugal, on the Douro, here crossed, according to Twiss, by an ancient and clumsy stone bridge, with 16 unequal arches; 34 m. N.N.W. Salamanca. Pop. about 10,000. (*Miñano*.) Its fortifications are of considerable extent, and some years ago enclosed upwards of 20 churches, 16 convents, three hospitals, infantry and cavalry barracks, a courthouse, public granary, bishop's palace, &c. The cathedral was much admired by Townsend (ii. 71), for its variety of marbles and the beauty of its hangings. Without the walls are the remains of an ancient castle. The inhabitants manufacture hats, serges, leather, liqueurs, and gunpowder, and have several dyeing houses. The city, which is supposed to have been the ancient *Seutica*, derives its modern name from the turquoises found in its vicinity, for which Zamora is the Moorish term. Alphonso, the Catholic, took it from the Moors in 748, but it was retaken by the latter in 985. Ferdinand the Great finally annexed it to Castile in 1093, and it was the seat of the Cortes in 1297 and 1302. (*Miñano; Townsend; Twiss; Dict. Geog., &c.*)

ZANESVILLE, p.v., capital of Muskingum co., O., 54 m. E. Columbus, 339 W. Beautifully located at the point where the National road crosses Muskingum river, opposite to the mouth of Licking river. Two bridges cross Muskingum river, of fine workmanship, connecting it with Putnam and West Zanesville. It contains an elegant courthouse and county offices, a jail, a market-house, two academies, an Athenaeum with an extensive reading room, a cabinet of minerals, and a library of 9000 volumes, a juvenile lyceum with a reading room and library, a bank, and another in Putnam, opposite; an insurance office, nine churches, 40 wholesale and retail stores, two flouring-mills, and six grist-mills in the immediate vicinity, three of which are moved by steam power; three woolen factories, one cotton factory, three saw-mills, one oil-mill, one paper-mill, three iron foundries, two brass foundries, two steam engine and machine shops, two glass houses, two rope-walks, two breweries, three coach factories, a steam hat-body factory, a shoe-last factory, five printing-offices, five weekly newspapers. The population of the village is 4766; and including West and South Zanesville and Putnam adjacent, 7000. The Ohio canal is connected with the Muskingum river by a side cut, 2½ m. long at Dresden; and by means of the dam at Zanesville, and a dam and lock between this and Dresden, a communication is opened to the Ohio canal, to which steamboats are continually plying. By dams and locks, the Muskingum is made navigable to its mouth, in the Ohio river. There is a canal around the falls of the Muskingum at Zanesville, which affords great water-power. At his decease, the proprietor of Zanesville left his property, amounting to over \$35,000, to found a free school. This place is on a tract granted by the United States congress to Ebenezer Zane in 1796, on condition that he should open a bridge track from Wheeling, Va., to Maysville, Ky. The place was laid out in 1799, and the first cabin was built. The population of the t. exclusive of the village, is 355.

ZANTE (an. *Zacynthus*), one of the Ionian islands (which see), of which it is the third in point of magnitude and importance, about 10 m. off the W. coast of the Morea, its capital being in lat. 37° 47' 17" N., long. 20° 54' 32" E. It is of a somewhat oblong shape; greatest length, N.W. to S.E., about 20 m.; greatest breadth, 10 m. Area estimated at 156 sq. m. Pop. in 1836, 35,348. It is mostly mountainous, particularly its W. portion, where several summits rise to the height of 1300 ft.; but on the E. side, behind the

## ZARA.

town of Zante, is an extensive and fertile vale, so covered with currant bushes (*Vitis Corinthiaca*), olive-trees, cyperuses, &c., as to entitle the island now, as of old, to the epithet of "woody."

Jam medio apparat flucta hemorosa Zacynthus.  
Æneid, iii., 270.

"About 9,000,000 lbs. currants are annually produced in this fertile vale. They are accounted better than those of Cephalonia, but inferior to those of the Morea. They are gathered in August, and spread out to dry for three weeks; and for this purpose a plot of ground is levelled and kept dry before every house in the valley. Much depends upon the process of drying: a shower of rain will sometimes diminish the value of the article by one third, and a second entirely ruin the crop." (*Burgess's Greece*, &c., i., 120.) The learned traveller, Dr. Chnndler, has given the following details with respect to the treatment of currants, which, perhaps, may be worth quoting: "When dried by the sun and air, they are transported to the city on horses and mules, guarded by armed peasants; and poured down a hole into magazines, where they cake together. When about to be shipped, the fruit is dug up with iron crows, and stamped into casks by men with bare legs and feet. In the ships it sweats, and, as we experienced, often fills the vessel with a stench scarcely tolerable. The islanders believe it is purchased to be used in dyeing, and in general are ignorant of the many dishes of which currants are an ingredient." (*Travels in Greece*, cap. 79.) The honey, oil, and wine of the island are much esteemed; of the latter no fewer than 40 different sorts are said to be made. Oranges, lemons, and citrons, are also exported, and about 40,000 barrels of salt are annually produced from the salt-works of the island. The pitch wells, visited and described by Herodotus (iv., 195), are situated towards the S. extremity of the island, in a small plain, open on one side to the sea, but elsewhere circumscribed by hill ranges. It is partly, at least, of volcanic formation, and occasionally suffers from earthquakes, one of which, in 1840 (October 30), committed the most extensive ravages. In the wells, a dark substance is continually forcing itself from the bottom through the water, boiling up in large globules, which burst when they come to the surface. The pitch is collected with large spoon-like implements: the average annual produce is about 100 barrels, used for smeared ships' bottoms, &c.

The town of Zante, on the E. shore of the island, is the largest in the Ionian islands, having about 20,000 inhabitants. (*Burgess*.) It stands partly on the level shore, and partly on some acclivities, one of which is crowned by its citadel, anciently called *Psophis*, founded by the Arcadian Zacythus. The town, which is well kept and clean, is supplied with water by an aqueduct constructed by the British. The reflection of the sun renders it extremely hot in summer, though the heat be a good deal moderated by the action of the sea breeze, which blows during the day. The harbour is capacious, and protected from the N.E. winds by a mole, at the extremity of which a lighthouse is erected. Ships anchor opposite the town, at from 500 to 1000 yards distance, in from 12 to 15 fathoms water. Zante is the see of a Greek protopapas, and of a Roman Catholic bishop, and has numerous churches, two synagogues, a lazaretto, a nlyceum, &c.; with some manufactures of linen, cotton, and woollen stuffs, liqueurs, soap, jewellery, &c. This town suffered severely from the earthquake already alluded to.

At the time of the Peloponnesian war, Zacynthus belonged to Athens; it was at an after period alternately a possession of the Macedonians and the Romans. Several curious antiquities have been discovered in the island, and it has been supposed that the remains of Cicero were deposited in a tomb discovered here in 1544. (*See Hughes' Travels*, i., 155, 156, &c.; *Burgess*; *Chandler's Greece*; *Cramer's Anc. Greece*; *Commerce*, Dict., &c.)

ZARA (an. *Jadera*), the cap. of Dalmatia, circ. of same name on the Adriatic, opposite the island Ugliano, 150 m. S.E. Venice. Lat. 44° 2' 25" N., lon. 15° 9' 32" E. Pop. about 6500; principally of Italian descent. It stands on a small peninsula, and is fortified with bastioned walls and several outworks. It has many good private dwellings, but its streets are narrow and ill drained, and it suffers from a deficiency of water. It has a cathedral and several other churches, 10 convents, a naval and military arsenal, and a theatre, with a lyceum, gymnasium, Episcopal seminary, many inferior schools, a museum of antiquities, &c. Its harbour is spacious, but exposed to N. winds, which sometimes blow with tremendous violence. The coasting trade and fisheries employ most part of the inhabitants, and a great number of vessels are owned in the port. The manufacture of *rosoglio* is almost the only other branch of industry carried on, and that at present to a very limited extent. (*Oesterr. Nat. Encyc.*) ZARA is an archbishop's see, the residence of a general commandant, and the seat of all the superior provincial courts of Dalmatia. Without its walls

## ZEALAND (NEW).

are the remains of an ancient aqueduct; but, with this exception, few other Roman antiquities exist in Zara, in consequence of their having been mostly employed in the building of the fortifications. (*Fertis's Dalmatia*, 115; *Berg-haus*, &c.)

ZEALAND, the largest and most important of the Danish islands, being that on which Copenhagen is situated. It lies mostly between the 55th and 56th degs. of N. lat., and long. 11° and 12° 40' E. at the entrance of the Baltic, being separated from Sweden by the Sound, and from Funen and Langeland by the Great Belt. Its area may be estimated at 2530 sq. m. Pop., in 1834, including that of the small and thinly peopled islands of Moen and Samsoe, 439,962. Like the rest of the Danish islands, it is flat, or, at most, gently undulating, and is in parts intersected by canals. The climate is mild, and similar to that of the S. of Scotland. It is well cultivated, and is exceedingly fertile, producing grain of all sorts, especially rye, barley, oats, and wheat. The pastures are excellent, and the island is celebrated for its breed of horses. It is, also, well stocked with cattle and sheep. Wood is plentiful, except in the middle of the island, where turf is used for fuel. It is studded with cottages, farms, and country-houses; bearing a greater resemblance to England than is exhibited by most continental districts. It is also the principal seat of the manufactures and trade of Denmark. It is subdivided into five bailiwicks, and is governed by a grand-bailiff: it forms, of itself, a separate ecclesiastical superintendency. (*See DENMARK*, in this work; *Inglis*; *Bremner*, &c.)

ZEALAND (NEW), a group of two large and numerous small islands in the S. Pacific ocean, belonging to the Australian continent, and now forming a dependency of the British crown. The group extends between 35° and 47° of S. lat., and 166° and 179° of E. long., about 19° E. of S. Australia and Van Diemen's Land, being the land nearest to the antipodes of Great Britain. The two large islands, now called New Ulster and New Munster, stretch lengthwise from N. to S., being separated by the narrow channel called Cook's strait: a strait of about the same width separates the most southerly of the above islands from New Leinster, formerly called Stewart's, or the S. island. The length of curved line extending through these three islands from the N. to the S. cape would be about 900 m. The middle island, or New Munster, is the largest; but New Ulster, which alone has been colonized by the British, is the widest, being about 300 m. in its greatest breadth. Altogether, the area of New Zealand is estimated by Mr. Terry at about 86,000 sq. m., or 55,000,000 acres; and the total population may perhaps be 200,000, of whom nearly 10,000 are Europeans. (*Terry's New Zealand*, &c.)

"The mountains of New Zealand stretch along the centre of the middle island in its whole length and along the better half of the N. island, and sloping gradually down towards the sea level, leave an immense extent of forest, plain, and pasture, on both sides of the mountain range, between it and the sea. Here and there along the line of this cordillera, several huge mountains, overtopping the rest, rise into the region of perpetual snow. Some are more than 14,000 feet high; an elevation nearly equal to that of Mont Blanc. There are likewise several subordinate ranges of hills, and a few detached outliers of vast dimensions. A few of the smaller mountains are barren, or clothed with fern; but by far the greater number are covered, up to the range of perpetual snow, by magnificent timber of enormous size and great variety." (*Present State of N. Zealand*, 778.) The country is well watered; an abundance of streams descend from the central chain on both sides. Few of the larger rivers have been surveyed to any great distance, but the Wai-kato, with its affluent the Wai-pa, the Wai-hou, or Thames, and others, are of considerable size and length. The shores are in parts iron-bound and dangerous; but the N. island especially is indented with many excellent bays and harbours.

Our knowledge of the geology and mineralogy of New Zealand is very imperfect. It has, however, several active volcanoes; in the N. island, also, are various cavities, which appear to be extinct craters, in the vicinity of which numerous hot springs are met with; some of these, as they rise to the boiling point, the natives use for cooking. (*N. Zealand*, 80.) Pumice-stone is abundant, and used by the natives for polishing their spears: coal is supposed to exist in the middle island, whence also comes the green talc of which the natives make some of their weapons. Ironstone is plentiful; some pigments used by the natives appear to consist of manganese; sulphur, whinstone, slate, granite, marble, &c., are found; and in every part hitherto explored there is clay fitted for brick-burning.

The climate is temperate, being analogous to that of France and the S. part of England. The mean annual temperature at Auckland is about 59° Fahr., that of the summer months 67°, and of the winter months 52°. (*Terry*, 667.) The country is free from the oppressive heats that prevail in the

## ZEALAND (NEW).

middle of the day at Sydney, and, what is of still greater importance, it is not subject to the long-continued droughts that prevail in the Australian continent: Strong winds, principally from the N.E. or S.W., always occur at the changes of the moon, frequently bringing rain, particularly in the winter months: the rains, however, do not last for days together, and the W. and more prevalent winds very seldom blow so hard as to interfere with navigation. In the interior the weather is colder, but more equable. The climate appears to be generally salubrious, and favourable to longevity; the prevalent diseases are mostly those which have been introduced by Europeans, though in some situations the natives suffer from scrofulous and glandular affections. (*Parl. Rep. on New-Zealand.*)

The country presents the aspect of perpetual vegetation, most of its indigenous vegetable products being evergreens; and the soil, which, in most parts yet explored, is a rich loam or vegetable mould of much fertility, is apparently well adapted to the culture of nearly all the useful vegetables of Europe. However, as Mr. Terry says, "the exaggerated statements circulated in England of the colony and its products, soil, and climate, have led generally to the very erroneous impression and opinion, that the necessaries of life, especially food, would be abundant and cheap. But New Zealand has neither a tropical climate, nor is it a country in which edible vegetables and fruits, indigenous to such regions, grow and flourish spontaneously and abundantly, nor is it a land inhabited by native animals adapted for the food of man, and easily obtained by the toils of the chase. The islands are, at present, uncultivated wastes, consisting either of mountains covered with dense forests, of plains and low lands covered with impenetrable high fern and shrubs, or of swamps and marshes covered with rushes and flax, without any open spots of grass land for pasturage, or of verdant downs and hills for sheep. In these vast tracts there is not to be seen a living animal, wild or domestic; and whatever is produced from the soil for the food of the population, either of grain from arable land, or of stock from pasturage, must be the work of time, of great labour, and of much expense. Small are and will be the resources of food from the actual produce of the islands, either animal or vegetable, for the subsistence of any great number of settlers until they themselves bring the land into cultivation and pasture, and import cattle and sheep from New South Wales, to stock it for the supply of their wants." (*Terry*, 57, 58.)

Timber and flax are at present the most valuable native products. But the former, owing to the extravagantly high rate of wages, the difficulty of the country, and the want of roads, is very high priced, even in the ports of the colony; while the freight to England, which is from £5 to £6 per load, amounts of itself to a prohibition of its importation into this country. No doubt, however, its price in the colony will be progressively reduced; and being admirably adapted for ship-building, this will probably become, at no very distant date, a profitable business. Timber will, also, there can be no question, become an important article of export to Sydney, Hobart Town, and other ports in Australia. The forest-trees are principally of the pine species. The kauri is of enormous size; one was cut and shipped in 1841, 150 feet in length and 25 feet in circumference at the base; and another now standing on the E. coast measures 75 feet round at its base, its height being unknown, owing to the thickness of the surrounding forest.

Flax, it has been supposed, will continue, for a lengthened period, to be the staple of the country. It is obtained from the leaves, and not from the stem, of the *Phormium tenax*, an indigenous plant. It is said to be distinguished by the length, strength, and flexibility of its fibres, and to be preferable to the flax of the N. of Europe. But, in point of fact, there is a great diversity of opinion as to its real merits, and it fetches at present but a low price. It is alleged that this is a consequence of its imperfect preparation, which is left solely to the native women: they separate the fibre from the external epidermis in a green state by means of a muscle-shell, and then expose it to the air for a few days, which bleaches the flax, and dries the thin inner epidermis. In heckling and properly freeing the flax afterward from this substance, there is a loss in quantity of 25 per cent., besides the trouble and expense. But, without presuming to say whether the defects with which it is charged are inherent in the flax itself, or depend on its preparation, it is abundantly obvious that, unless it be furnished of a superior quality, it will never become a considerable article of export.

The principal food of the natives, when other kinds of vegetables have failed, has, until recently, been the roots of fern, which is found in inexhaustible abundance, and in the greatest variety throughout New Zealand. The natives had made some progress in agriculture even before their country was visited by Captain Cook, who saw along many parts of the coast small patches of ground turned up

and cultivated, each separate district being fenced in with reeds. In these places sweet potatoes, cocos or eddas, gourds, &c., were grown. Captain Cook planted and left with intelligent natives the seeds of wheat, peas, cabbage, onions, turnips, potatoes, &c.; though all these seem to have perished, through neglect or otherwise, except turnips and potatoes, which last are now the chief dependence of the natives during winter. Taro, water-melons, and pumpkins, are merely temporary food in their season. Maize is grown to some extent, but very little of any other kind of European grain. In general, the New Zealanders cultivate only virgin soils, raising two crops in succession, and then proceeding to break up new soil. Their native implements are of the rudest description; but latterly European spades, hoes, axes, &c., have been plentifully introduced among them. For these they show a great avidity; and, in fact, it is rather by payment of such articles and others of utility, than of finery and mere baubles, that purchases of land have been effected by Europeans.

Except a few cattle or sheep in the possession of the missionaries, and a small number of goats, no kind of live stock existed in New Zealand, down to a very late epoch, except pigs. These, however, from the great abundance of fern roots, their favourite food, multiply exceedingly, and have been allowed to run wild by the natives, who, when they require them, catch them by means of dogs. It is remarkable that when New Zealand was first discovered, it had *no indigenous mammalia whatever*; indeed its only quadrupeds were a few species of lizards, which the inhabitants held in veneration or terror. Even the rat and dog were introduced by Europeans; and the rat is at present the principal species of *game*! A good many parrots, paroquets, wild ducks, pigeons of a large size and fine flavour, &c., inhabit the forests; and poultry are found to thrive very well, though not yet reared to any great extent. Indeed, if we except their prisoners of war, almost the only animal food hitherto used by the New Zealanders has been fish, which abound round the coasts.

The New Zealanders probably belong to the Malay family, and if so, are by far its best specimens. In general, the men are tall; many individuals of the upper classes reaching the height of 6 feet and upwards. They are strong, active, and almost uniformly well shaped. Their hair is commonly straight, but sometimes curly, particularly the women, who are frequently handsome. Their colour resembles that of a European gypsy; but varies in individuals from a dark chestnut to the light tinge of an English brunette. Some individuals of the negro race of Australia and the E. archipelago are said to inhabit parts of the middle island; but the New Zealanders bear no sort of analogy to these, to whom they are greatly superior in every respect. They make excellent seamen, in which capacity they are extensively known. If we except occasional cannibalism and infanticide (both of which are said to have greatly decreased of late years), they manifest fewer of the vices of savages than almost any other savage people. Their manufactures, as may be supposed, are few, and mostly confined to the furniture of their huts, articles of dress, weapons, and other necessities. But they prepare mats and other articles in flax of great beauty; evince much ingenuity in carving and building canoes; and, with cultivation, would, perhaps, attain to a considerable degree of civilization. They have an abundance of poetry of a lyrical kind, in a metre which appears to be regulated by a regard to quantity; and are passionately fond of music. They have also a kind of astronomy; and, according to Baron Hügel, there is not a single tree or even weed, a fish or a bird, in the N. Island, for which the natives have not a name universally known. Unlike many other savages, they have evinced the greatest aptitude for sharing in the usages of civilized life; and this, probably, is a main cause of their ready adoption of the doctrines inculcated by the missionaries, and of their acquiescence in the rule of Great Britain. A considerable proportion of the natives are slaves to others, who are themselves dependent, to some extent, on certain *arcekes* or head chiefs; but the holders of slaves appear, notwithstanding, to have independent control over their own lands, and are able to dispose of them at will, without the consent of the *arceke*. (*See Parl. Rep.*) Polygamy is practised by such of the New Zealanders as continue attached to their ancient superstition: but the missionaries, who have establishments in various parts of the N. Island, have, according to their own account, been eminently successful in the conversion of many of the natives to Christianity; and these have given up the practice of polygamy, cannibalism, &c.

New Zealand was discovered by Tasman in 1642; but its extent and character were not ascertained till the voyages of Cook in 1769 and 1774. From that period, the coasts were occasionally visited by whalers and some communication was held with the natives; but no permanent settlement appears to have been made by any people till about

## ZEALAND (NEW).

1815, when a missionary station was established in the Bay of Islands, towards the N. extremity of the N. island. Though the right of Great Britain to these islands was recognized at the general peace, no constituted authority was placed over New Zealand till 1833, when a resident, subordinate to the government of New South Wales, was sent hither, but with very limited powers. Meantime the shores had become infested by marauding traders, runaway convicts, and other unscrupulous characters, who introduced a taste for ardent spirits, various diseases, and much demoralization. These persons also swindled, or attempted to swindle, the natives out of large tracts of land, by getting them to subscribe contracts, of the real import of which they certainly knew little or nothing by which entire districts were conveyed away for the merest trifle. Under these circumstances, it became necessary to establish a government sufficiently strong to protect the aborigines and the real interests of the colonists. Accordingly, in Jan. 1840, New Zealand was constituted a colony dependent on New South Wales; and a lieutenant-governor appointed, who immediately proclaimed, among other announcements, that *all purchases of land would, in future, be void unless conducted through the British local government.* But shortly before the formal occupation of the islands, the mania for speculating in land attained to an enormous extent; and vast tracts, equal, in fact, to provinces, were acquired by a few individuals, belonging to the islands, to Sydney, and other parts. It was not, therefore, enough to prevent such wholesale acquisitions in future. Justice to the natives, on the one hand, and the best interests of the colony on the other, made it imperatively necessary that the grounds on which the claims to land were made should be carefully inquired into; that in all cases in which the natives had been swindled the grants should be cancelled; and that, when confirmed, their extent should be limited. And, in consequence of these considerations, a commission has been appointed to inquire into the validity of all claims to land; and the commissioners have been instructed to recognize those only which are founded on fair and equitable considerations, with the important proviso, that no claim for land, when affirmed, shall be allowed to a greater extent than 2560 acres. Lands acquired by the government will be sold by auction, as in the other colonies.

In April, 1841, New Zealand was separated from New South Wales, and is now placed under a governor, with whom the colonial secretary and treasurer, the attorney-general, and three senior justices of the peace, compose the legislative council. Besides a bishop and 12 clergymen of the church of England, 62 other ministers of the Church Missionary, Wesleyan, Scotch church, and Roman Catholic associations, are established in the country. Auckland, the capital, on the Waitemata, in lat.  $36^{\circ} 51' 27''$  S., long.  $174^{\circ} 45' 20''$  E., is rapidly rising into a town, and has a spacious harbour. Russell, on the Bay of Islands, and Port Nicholson, are the other principal stations.

New Zealand has, till lately, been much frequented by whaling ships, not only British, but American, French, &c.; but the establishment of custom houses and a regular government has driven many of these to other islands of the Pacific; and a long time will probably elapse before the colonists be much benefited by whale fisheries of their own. Neither are New Zealand colonists likely to be speedily enriched by farming on a large scale, on account of the great expense necessary in the clearing the lands of fern. According to Mr. Terry, "the class of emigrants to which New Zealand at present offers the most certain advantages and success are those who have been accustomed to husbandry. If such persons, having families, would be content with small farms of from 20 to 50 acres, according to their means for outlay in stock and buildings, and then by their own personal industry and labour, cultivate the land, and rear cattle, poultry, &c., with moderate views and expectations, looking to frugality, perseverance, and time, to acquire competence and independence, instead of resorting to land-jobbing and speculation for sudden wealth, they would be certain of success in their undertakings, and of realising property in a few years."

"If New Zealand, by the power and means of abundance and judicious emigration, becomes extensively cultivated and plentifully stocked with cattle, so as to render the necessities of life cheap, and consequently diminish, proportionally, the rate of wages, it will most probably become in the end, the seat of extensive manufactures. In addition to moderate wages and cheap food, there would be the further important auxiliaries of coal, timber, and clay, with endless excellent localities, having water communication. New Zealand would then bring into profitable production her timber, for ship-building; flax, for canvasses, ropes, &c.; copper, for sheathing her ships, and all other purposes; sulphur, for brimstone, &c.; alum and dye woods, in manufacturing the wool of Australia or the cotton of India; tan, for leather from the hides of her own cattle, or from Aus-

## ZOAR.

tralia and S. America; tobacco which could be manufactured; breweries and distilleries, for barley and hops of native growth, &c. But it is far more rational to conceive that, instead of attempting fruitlessly to compete in the exports of raw produce, the colonists in the first instance will endeavour to render themselves independent of any other colony for the supply of food; and when food and labour are cheap, they will direct their capital and energies to bring into play the other national products, in manufactures for their own wants, as well as to supply Australia, India, China, and Spanish America, all of which are not far distant." (Terry, p. 259-261, &c.; *Parl. Rep. on New Zealand*; *Pres. State of New Zealand*; *Nicholas*; *Polack*, &c.)

ZEITZ, a town of Prussian Saxony, reg. Merseburg, cap. circ., on the White Elster, here crossed by a stone bridge, 22 m. W.S.W. Leipzig. Pop. 10,000. (*Berghaus*.) It is walled, is divided into an upper and lower town, and has a cathedral, and several other churches, various hospitals, two castles, one of which was formerly the residence of its princes, but now serves for a house of correction, a gymnasium, with a public library of 14,000 vols., and manufactures of cotton goods, earthenware, leather, shoes, &c.; with cotton-printing establishments, breweries, and distilleries. It is the seat of the ordinary circle courts, of an ecclesiastical board, and a Calvinist college. The gardens and grounds in its vicinity are celebrated for their neatness, and the attention bestowed on them. (*Berghaus*; *Dict. Géog.*, &c.)

ZELL, or CELLE, a town of the Hanoverian dom., distr. Lüneburg, on the Aller, where it receives the Fuse, on the road between Hanover and Lüneburg, 22 m. N.E. the former. Pop. 11,200. It is well built and paved, and has Lutheran, Calvinist and Roman Catholic churches, an old castle once the residence of the dukes of Lüneburg, a large penitentiary, a medical college, Latin school, society of agriculture, and a famous royal breeding stud. Its inhabitants manufacture linen cloths, hosiery, flannel, hats, tobacco, &c., and have a brisk transit trade both by the Aller and by land. Celle is the seat of the high court of appeal for the kingdom of Hanover, the decisions of which were final, till recently they were interfered with by the government. (*See HANOVER*, i. 1062.)

It was the residence, during the latter years of her life, of the unfortunate Matilda, queen of Denmark, and sister of George I. of England; and a monument to her memory stands in the palace garden.

Zell has also been for a lengthened period the favourite abode of such of the nobility of Lüneburg as do not live in Hanover. (*Hodgskins's, Travels in the N. of Germany*, i. 155-163.)

ZERBST, a town of N. Germany, territory of Anhalt-Dessau, on a small tributary of the Elbe,  $17\frac{1}{2}$  m. S.E. Magdeburg. Pop. 9200. It is walled and entered by six gates; has an old castle, several churches, one of which is among the finest structures of its class in Germany, two well-endowed charitable institutions, an orphan asylum, a house of correction, and a large school termed the *Franciscanum*. It is the seat of the high court of appeal for the Anhalt and Schwartzburg principalities; and till near the end of last century it was the residence of the ducal family of Anhalt. It has manufactures of jewellery and earthenware. The empress Catherine II. of Russia was a princess of Zerbst; but she was not born here, as is stated in the *Dict. Géographique*, but at Stettin (in 1729, of which her father was governor. (*Berghaus*; *Dict. Géog.*, &c.)

ZITTAU, a town of the kingdom of Saxony, circ. Bautzen, on the Mandau, a tributary of the Neisse, 50 m. E.S.E. Dresden. Pop. in 1838, 8674. It is tolerably well built, and has numerous churches, a gymnasium, public library of 13,000 vols., house of correction, and various charitable institutions. It is the centre of the linen manufactures of Lusatia; and most of its inhabitants are occupied in the weaving of damasks, ticks, and other linen fabrics, or of cotton and woollen cloths; and in bleaching, printing, earthenware and other auxiliary occupations. Zittau has also porcelain factories, paper-mills, and breweries, and a large trade in flax. It was the birth place of the great orientalist, B. Michaëlis. (*B. Ritter*; *Berghaus*, &c.)

ZOAR, p. v., Lawrence L., Tuscarawas co., O., 120 m. N.E. Columbus, 319 W. Situated on the E. side of Tuscarawas river, a short distance from the Ohio canal. This singular community was settled from Germany, by a colony called Separatists, from their secession from the Lutheran and other churches. It is under the government of a patriarch, and chooses its own officers. They were at first poor, and purchased their lands on credit, but they have paid for them, and added 1000 acres to their possessions, which are in a high state of cultivation. Their cattle are of a superior breed, and carefully selected; and their sheep, though not of the finest wool, are bred with a view to their profitability, and are conducted to the hills in the morning by shepherdesses, and are returned by them to their fold in the evening. The village contains one store, one grist-mill, two saw

## ZOMBOR.

mills one oil-mill, one woollen factory, one linen factory, upwards of 60 dwellings, and over 300 inhabitants. On the canal they have several warehouses and two blast furnaces. They are tenants in common, and each member seeks to advance his own interest by promoting that of the community. They have an extensive pleasure garden with a hot-house, which contains rare plants and exotic fruits, including lemons, oranges, figs, pomegranates, &c. The inhabitants of large places on the canal send their rare plants here for preservation in the winter. Their village is kept with the most perfect neatness, and is often visited as a curiosity.

ZOMBOR, a royal free town of Hungary, co. Bacs, of which it is the cap., in an extensive plain near the Francis canal, uniting the Danube and the Theiss, 118 m. S. by E. Pesth. Pop. about 21,000, mostly of the Greek church. It has several fine buildings, including a county hall, town-house, several churches, barracks, and the government offices. Here, also, is a Greek ecclesiastical seminary, and a Roman Catholic high school, with some silk manufactures, and a considerable trade in corn, wine, and cattle. (*Oest., Nat. Encepe.*)

⌈ZUG or ZONG, a canton, lake, and town of Switzerland, in the central part of the confederation. The canton, which is the smallest in Switzerland, is enclosed between the territory of Zurich on the N., Schwytz on the E. and S., and a small part of Lucerne and Aargau on the W.; from which last it is separated by the Reuss. Area, about 85 sq. m.; a considerable part of which is occupied by the lakes of Zug and Egeri. Pop. in 1837, 15,322. Except a small plain to the N. of Zug, the surface is wholly mountainous, but the mountains do not rise to any great elevation; the highest the Rossberg, on the S. border, being little more than 5000 ft. above the sea. Principal rivers, Reuss, Sihl, which forms the N.E. boundary, and Lortz, which brings the waters of the Egeri lake into that of Zug, and forms also the outlet of the latter towards the Reuss. The lake of Zug, principally comprised in this canton, but partly in that of Schwytz, and intermediate in situation, as in character, between the lakes of Zurich and Lucerne, is about 8½ m. in length, N. to S., by 3 m. in its greatest breadth. Its area has been estimated at about 10 sq. m., and the height of its surface above the level of the sea, at 1385 English ft. Its waters are of a very dark blue colour; and though near the town of Zug, its depth appears to be only about 200 ft.; at its S. extremity it is said to exceed 1200 ft. (*Ebel; Picot, &c.*)

The banks of the lake of Zug are cultivated, richly wooded, and in general gradually sloping, except on the S. and S.W. sides, where the Righi and Rossberg rise abruptly from the water's edge. The lake abounds with fish, the taking of which forms an important occupation of the inhabitants of its vicinity. Some indifferent wine, with cider, kirschwasser, &c., are made, and considerable quantities of apples and other fruits are grown for exportation; but the principal employment of the population is cattle breeding. A few silk and cotton fabrics are woven, cotton yarn is spun, and at Zug, Cham, and Baar are some tanneries and paper-mills; but the manufactures of the canton are comparatively insignificant. The government is strictly democratic. The cantonal council is composed of 54 deputies, elected for two years by all the male citizens of the canton above the age of 19 years, who are not bankrupt, pauper, or under penal condemnation. This council exercises all the ordinary administrative functions. The legislative power is exercised by the *triple council*, composed of the cantonal council and two additional members for each deputy, chosen like the deputies triennially by the communes. The general assembly meets annually in May, its *landamman* or president being taken alternately from the two circles into which the canton is divided. The deputies are paid for their services, at such rates as can be afforded by the communes which send them. The sum paid by the town of Zug to its representatives is about £4 each per annum! and, besides this, every councillor entering Zug to attend a council, which takes place perhaps once a month, receives about 9d. English. And some of the communes are so poor as not to be able to pay even this pittance to their representatives. (*Inglist.*) The chief criminal tribunal consists of 25 members, and the ordinary civil tribunal of 6 assessors and the *statshalte*: the latter becomes a final court of appeal, by the addition of 6 members chosen annually by the cantonal council. Civil causes below the amount of 12 francs, misdemeanours, and other matters of minor importance, are decided by the communal assemblies and tribunals. There is no tax of any kind in the canton. The whole state expenses, amounting to about £160 a year, are defrayed from the general Swiss fund, drawn from the entry of foreign merchandise, and from a monopoly of salt, which is farmed by the government, and brings in about £80 a year. Zug furnishes a contingent of 250 men to the army, and 2497 francs a year to the treasury of the Swiss confederation.

## ZURICH.

Zug, the capital on the N.E. side of the lake of the same name, 15 m. S. Zurich, with about 2500 inhabitants, is the only town worth notice. It is pleasantly situated, and has several good churches, to one of which is attached a curious *golgotta*, containing many hundreds of skulls, each labelled with the name of its original possessor. Provisions are cheap at Zug; and though without the pretension to rank with Zurich in importance, a residence here would seem to be the more agreeable of the two from the greater cordiality and gaiety of the people.

The people of this canton are of a German stock, and for the most part similar to those of Schwytz, though less ignorant and superstitious. They are all Roman Catholics; and, small as is the extent of the canton, Ebel says, "*La pays de Zug fournit des prêtres à une grande partie de la Suisse Catholique.*" (*Picot, Statistique de la Suisse; Ebel's Manuel, &c.; Inglist's Switzerland; Diet. Géog., &c.*)

ZURICH (CANTON OF), a canton of Switzerland, ranking first in the confederation, and being superior also, in population and importance, to most of the other cantons. It extends between lat. 47° 10' and 47° 40' N., and long. 8° 20' and 9° E.; having E. Thurgau and St. Gall, S. the lake of Zurich and the canton Zug, W. Aargau, and N. Schaffhausen and Baden, from which it is partly separated by the Rhine. Length, N. and S., 30 m.; greatest breadth, 25 m. Area, 685 sq. m. Pop., in 1837, 231,576; nearly all Protestants. Surface generally undulating; and though picturesque, it presents none of those grand natural features which arrest the traveller's attention in the cantons further S. Several mountain, or rather hill ranges, enter Zurich, but the highest summit, the Hörnli, near the E. border, scarcely rises to 3800 ft. above the sea.

After the Rhine, the principal rivers are its tributaries, the Limmat, which drains the lake of Zurich, Thur, Toss, Sihl, &c., with the Reuss forming a part of the W. border. Of these, however, only the Limmat is navigable. The Greiflen, famous for its fine eels, and several smaller lakes, are in this canton. Climate mild; the mean annual temperature at Zurich is about 48½° Fahr. Nowhere in the canton is the ground perpetually covered with snow; and the soil is in general productive. Agriculture is perhaps better conducted in this than in most other parts of Switzerland; manuring is well understood; and irrigation is successfully practised. Inglist says, "Anywhere in the neighbourhood of Zurich, one is struck with the extraordinary industry of the inhabitants; and if we learn that a proprietor here has a return of 10 per cent., we are inclined to say, 'He deserves it.' It is impossible to look at a field, a garden, a hedge, scarcely even a tree, a flower, or a vegetable, without perceiving proofs of the extreme care and industry that are bestowed upon the cultivation of the soil. If, for example, a path leads through or by the side of a field of grain, the corn is not, as in England, permitted to hang over the path, but is everywhere bounded by a fence. If you look into a field towards evening, where there are large beds of cauliflower or cabbage, you will find that every single plant has been watered. In the gardens, which, around Zurich, are extremely large, the most punctilious care is evinced in regard to the culture of every product." (*Inglist's Switzerland, &c.*, 25.)

The labouring classes in this canton are almost universally proprietors of the small farms and cottages which they cultivate and inhabit. The corn grown is insufficient for the population, but great quantities of fruit and garden vegetables are raised. The vine is pretty generally cultivated. But, though improved, the wine is still very inferior. The pasture lands are not extensive, and no great quantities of farm stock are reared: a very large breed of cattle is, however, produced by a cross between those of this canton and those of Schwytz. Some iron, coal, salt, &c., are met with, but mining industry is not of much consequence. (*Meyer, Der Kant. Zurich.*)

Zurich is one of the principal manufacturing cantons of Switzerland; its inhabitants generally dividing their attention between the labours of agriculture and those of the loom. "I have seldom entered," says Dr. Bowring, "a rural dwelling without finding one or more looms in it, employed in the weaving of silk or cotton. If the labours of the field demand the hands of the peasant, his wife or children are occupied in manufacturing industry. When lighter toils suffice for the agricultural part of the family exertions, the females and the young people resign the loom to the father or the brothers. The interstices of agricultural labour are filled up by manufacturing employment: and in more than half of the operations of Zurich the farmer and the weaver are united." (*Rep.*, p. 69, 70.) Cotton and silk fabrics are those principally produced. The silk fabrics consist of Florentines, gros de Naples, marcellines, tafetas, levantines, handkerchiefs, crapes, shawls, velvets, &c. Early in the present century about 5000 looms were employed upon these goods, but since the peace they have rapidly increased. The disturbances at Lyons, also, in 1834,

## ZURICH.

were the cause of many Lyons workmen settling in Zurich. In 1840, Villermé estimated the number of silk-loom in the canton at 11,000, and the weavers of all ages at 16,000. (*Tableau des Ouvriers*, i., 420.) The annual value of the total produce of the silk-loom has been estimated at £600,000 sterling. The male weavers of Florentines and serges get from  $\frac{3}{4}$  to  $\frac{4}{5}$  francs a week wages, and of gros d'Orléans and marcelines, at an average from  $\frac{6}{8}$  to  $\frac{7}{8}$  francs a week. (*Hand-loom Weavers' Rep.*) The cotton manufactures of Zurich had their origin in the 5th century, their two principal seats being then, as now, Zurich and Winterthur. There are said to be about 12,000 cotton weavers in the canton, and 4000 persons engaged in other trades connected with the cotton manufacture, producing annually 800,000 pieces of cotton. In 1836 there were 19 cotton printing establishments in the canton, employing about 1000 workmen, and printing 100,000 pieces a year of cloth. (*Bowring's Rep.*, p. 76.) Cotton spinning is, also, extensively carried on, there being, in 1836, 292,900 spindles in operation. (*Hand-loom Weavers' Rep.*, p. 103.) At Winterthur and elsewhere numbers 120 and 130 are made; but the yarns spun are mostly from 20 to 40, the higher numbers being imported from England. Forty thousand hundred weight of raw cotton are supposed to be annually consumed in the canton. The general average rate of wages in the Zurich mills is, for a man, about  $\frac{7}{8}$  francs, girls  $\frac{4}{5}$  francs, and children 3 francs a week. (See also a table of the spinners' and weavers' gains in Villermé's *Tableau des Ouvriers*, i., 429.)

The other manufactures are not of any great importance. The woollen trade does not employ 300 hands, and the linen manufacture is now almost wholly extinguished. The imports of Zurich mainly consist of cotton and cotton yarn (Nos. 80 to 150), woollen cloths, colonial products, bark, straw hats, linens, furs, glass, stationery; wheat, principally from Swabia; wine, brandy, fruits, tobacco, fir-wood, raw silk, butter and cheese, minerals, &c. The exports are cotton cloths, particularly Turkey reds; silk goods, chiefly plain; machinery, tanned leather, kirschwasser, and sometimes an excess of agricultural produce to the neighbouring districts. (*Bowring's Rep.*, p. 77.)

"Most of the families in Zurich canton, consisting of father and mother and two or three children, earn among them, or possess in the produce of their land, an income fully equal to 30s. a week in England. The working classes are, compared with those of England, more moral, and better educated. With regard to education, the law compels it, and consequently there are scarcely any persons to be found who cannot read, and very few who cannot write. Music is much cultivated in this canton; and the whole demeanour and appearance of the working classes present a most gratifying picture of high prosperity, contentment, morality, and intelligence. Few cantons are really more flourishing: the entire poor rates a few years since was only 2½d. per head per annum." (*Symons in Hand-loom Rep.*) In point of fact, however, this state of things is mainly to be ascribed to the extreme economy of the people, a consequence, in part, of severe summary laws, and to their avoiding all superfluous expenditure.

The constitution of Zurich underwent a great change in 1831. The cantonal assembly, or greater council, still consists, as formerly, of 212 members; but instead of 130 being elected by the grand council itself, only 33 are now so nominated, the remainder being chosen by the different guilds, and the population at large. Every male above the age of 19, not a domestic, a bankrupt, a recipient of public relief, or under penal condemnation, has a right to vote in the election of representatives: citizens must, however, be 30 years of age to sit in the chamber. The members of the greater council are elected for four years; but half their number goes out biennially. By the new constitution, the executive and judicial powers, formerly united in the same individuals, are separated; the functions of the former are exercised by a body of 19 members chosen by the greater council, and those of the latter by a high court of appeal composed of 11 members, a criminal court of primary jurisdiction in Zurich, district courts, &c. The proceedings of the council and of the law courts are public; freedom of trade and of the press is guaranteed; and each individual contributes to the exigencies of the state in proportion to his income. (*Meyer, Kant. Zurich*.)

The cantonal government compels a general system of insurance against fire, being itself the insurer. Public revenue in 1834, 1,333,380 Swiss francs; expenditure, 1,291,433 francs. Zurich has no public debt. This canton contributes 3858 men to the army, and 77,153 francs a year to the treasury of the Swiss confederation. (*Picot, Statist. de la Suisse*.) It is divided into 11 districts, but it has no town, except its capital, deserving of notice.

ZURICH (an. Turicum), a town of Switzerland, cap. of the above canton, and alternately with Bern and Lucerne the seat of the confederate government, on the Limmat, at

its efflux from the N.W. extremity of the lake of Zurich, 58½ m. N.E. Bern. Lat. of the observatory, 47° 32' 31" N.; long. 29° 31' 30" E. Pop. in 1833, 11,536. It is beautifully situated, the river dividing it into two parts, which are connected by three bridges; and considerable improvements are going on in the town. It has some fine public walks, but few public buildings are worth notice. The principal are the cathedral, a massive edifice of the 10th or 11th century, in which Zwingleus denounced, though in comparatively mild and measured terms, the errors of the church of Rome, and enforced the principles of the Reformation; \* St. Peter's church, of which Lavater was the minister; the town hall, a square edifice, in which the diet meets; the old arsenal; the town library, a spacious edifice, containing about 60,000 volumes, with portraits of Zwingleus and many of the burghomasters of Zurich, a bust of Lavater by Dannecker, a bas-relief model of a great part of Switzerland, a collection of fossils, &c.; and, in the middle of the Limmat, the town of Wellenberg, formerly a state prison.

The principal manufactures are those of silk and cotton goods; and numerous factories and country houses stud the banks of the lake in the environs. "In Zurich," says Ingalls, "It is all work and no play; there are no amusements of any kind, nor probably do the inhabitants feel the want of them. There is no theatre; there are no public concerts: balls, in a canton where leave to dance must be asked, are out of the question. The great object of the Zurichers is to get money: distinction in wealth is the chief distinction of rank known in Zurich. Literature, however, has kept its place here; and nowhere, perhaps, in Europe is the study of the classics more general than in this city. Here are an academy for theology and various other branches of philosophy; another academy preparatory to the former; an institution for medicine and surgery; another for the education of merchants; an institution for the instruction of the deaf and dumb, and for the blind, the model of which was considered so excellent that upon it Napoleon formed that of Paris; academies of artists and music; a society of public utility; and many schools for instruction in languages and for the education of the poor. Two newspapers are published in Zurich, one appearing weekly, the other twice a week; and there is also a monthly literary journal. If house-rent were out of the question, one might live cheaply enough at Zurich, or in its neighbourhood. Beef usually sells at about 3d. per lb., mutton at 2½d., and veal 1d. higher: fowls average 1s. 6d. a pair, butter 7d. per lb., and eggs two dozen for 10d. But the reasonable price at which most necessities may be obtained in Zurich is more than neutralized by the high rent of houses, for which indeed at least three times the sum is asked that would command the same accommodation in England: and to those desirous of selecting a constantly agreeable residence I dare not recommend Zurich. A winter's residence could not be otherwise than *triste* in a city where amusement is confounded with crime, and where men and women do not meet each other in society." (*Ingalls's Switzerland*.) There is, however, a museum club, with a good reading-room. Where the leading English newspapers and periodical publications are taken in, a perpetual communication is kept up by diligences with Basle, Bern, Constance, and the other chief Swiss towns; and by steamboats twice a day with places on the bank of its lake, Zurich was one of the earliest cities that joined the Swiss confederation; and here the Reformation in Switzerland commenced, under Zwingleus, in 1519. Among its distinguished natives have been the two Gessners, Zimmermann, Fuseli, Lavater, Bodmer, and Pestalozzi. (*Ebel; Ingalls's Diet. Geog.*, &c.)

ZURICH (LAKE OF), one of the principal lakes of Switzerland, in the E. part of which it is situated, being bounded by the cantons of Zurich, Schwytz, and St. Gall. It curves in a semicircular manner, from S.E. round to N.W. Length, about 24 m.; breadth, varying to about 3 m.; but at Rapperschwyll it is contracted to less than  $\frac{1}{2}$  m., and is crossed there by a wooden bridge. Area estimated at about 23 sq. m.; height above the sea, 1362 English feet. Its depth in some places exceeds 600 ft.; but for several hundred yards from its banks it is (near Zurich at least) seldom more than from 6 to 12 ft. in depth. At its S.E.

\* Zwingleus, or rather Zuinglie, was born January 1, 1484, at Badhausen, a small village in the Tockenburgh. "Of all the Reformers," says Cox, "the mild and elegant Melancthon alone copied, Zuinglie seems to merit peculiar esteem. He possessed to a great degree that spirit of meekness, moderation, and charity which are the characteristics of true Christianity; and, amid all the disputes between the Lutherans and the Reformed churches, was a constant advocate for peace and reconciliation. He was perfectly free from narrow bigotry, which makes no distinction between points of the most indifferent and objects of the greatest importance, as from overbearing pride, which, while it violently condemns the opinions of others, assumes infallibility with respect to its own. In a word, it was his opinion that, provided Christians agree in the most essential articles, they ought to bear with any difference on subjects less incontestable, and which do not influence morals." (*Cox's Switzerland*, i., 62, 8vo ed.)

## ZUTPHEN.

extremity it receives the Linth canal, which brings to it the superfluous waters of the lake Wallenstadt; at its N.W. extremity it discharges itself by the Limmat. Zurich, Meilen, Rapperschwyl, and Richtenschwyl, are on its banks. This lake has none of that savage sublimity which characterizes most of the Swiss lakes: its scenery is, in fact, comparatively tame. Inglis calls it "the Winandermere of Switzerland." The hills around it scarcely rise to 3000 ft. above the sea, and they descend in gentle and cultivated slopes to the water's edge; where the banks, from one end of the lake to the other, are studded with villages, country houses, and other habitations. Good carriage roads run along both sides of this lake; and it is daily traversed by steamers between Zurich and Rapperschwyl. (*Ebel; Picot; Inglis's Switzerland; Stein's Handb.; Mayer, Du Canton Zurich; Murray's Handb. for Switzerland, &c.*)

ZUTPHEN, a fortified town of the Netherlands, prov. Guelderland, cap. arrond., on the Yssel, crossed here by a stone bridge, where it is joined by the Brickel, 15 m. N.E. Arnhem. Pop., according to Stein, about 10,000. It is strong by its situation, and, though in the midst of fens, is not considered unhealthy. It is divided by the Brickel into an old and a new town. The principal church is an old and stately edifice: the town-hall, the college of deputies, and the palace of the former counts of Zutphen, are the other most conspicuous buildings. Here, also, is a Latin school, a society of physical science, a court of primary jurisdiction, manufactures of cotton fabrics, with tanneries, paper and glue factories, oil and flour mills, &c.

Zutphen was one of the Hanse towns. It was taken and pillaged by the Spaniards in 1572 and 1583, but was retaken by the troops under Prince Maurice in 1591. In this siege the famous Sir Philip Sidney, the flower of the chivalry of Elizabeth's reign, received a wound of which he died on the 17th of October, at the early age of 32. (*De Cloet; Stein; Dict. Géog.*)

ZVORNIK, or ISVORNIK, a fortified town of Bosnia, cap. sandjak, on the Drin, 72 m. W.S.W. Belgrade. It is situated on a rocky height, and has two castles, and a large collection of mud houses, with several mosques, and Greek and Roman Catholic churches. Its pop. has been estimated at 15,000. It is said to have a considerable trade in timber and fuel with Belgrade, Semlin, &c.; but from its

## ZYTIOMIERS.

lying out of any great road, it is very seldom visited by travellers from W. Europe; and our information respecting it (as, indeed, of the whole of Bosnia) is very imperfect.

ZWICKAU, a town of the kingdom of Saxony, cap. circ. of its own name, on the Mulda, 58 m. S.W. Dresden. Pop. in 1837, 7239. It was formerly strongly fortified, and suffered repeatedly in the wars of last century between Austria and Prussia. Its principal buildings are St. Mary's church, with some fine paintings by Wohlgemuth, and a lofty tower, which was often ascended by Luther; and an old castle, now used for a house of correction. The gymnasium has a library of 18,000 volumes (*B. Ritter*); and there are also some military storehouses, a hospital, &c. Zwickau has manufactures of woollen cloths, hosiery, cotton goods, and hardware; which she owes to the coal fields on both sides the Mulda, in her vicinity.

ZWOLLE, a fortified town of the Netherlands, province Overijssel, of which it is the cap., on the Zwartewater, about 10 m. from the Zuyder-zee, and 50 m. E.N.E. Amsterdam. Pop. between 15,000 and 16,000. It is well built, in the style of most other Dutch towns, and has several suburbs, eight churches, including a fine old cathedral, a house of correction, tribunals of primary jurisdiction and commerce, and some agreeable promenades in the vicinity. It was formerly one of the Hanse towns, and its trade is still considerable in cattle and other live stock, dried fish, corn, wool, hides, honey, leather, &c. It has some salt and sugar refineries, tanneries, &c. It was taken by the Dutch in 1580. The famous Thomas à Kempis was, for 64 years, a monk of an Augustine priory in this town, where he died in 1471. (*De Cloet; Dict. Géog.; Murray's Handbook, &c.*)

ZYTIOMIERS, or Jitomir, a town of Russian Poland, gov. Volhynia, of which it is the cap.; on a tributary of the Dniepr, 75 m. W.S.W. Kief. Pop. in 1838, 17,434. (*Berghaus.*) It has three Russo-Greek, a Lutheran, and two Roman Catholic churches, various government buildings, a gymnasium, seminary, public library, &c. It has increased greatly in importance since it came into the possession of the Russians; it has manufactures of hats, leather, &c., and a considerable trade in woollen, silk, and linen fabrics, honey, wax, salt, and wines, chiefly with Galicia, Hungary, and Wallachia. (*Schnitz.; Poss.; Berghaus, &c.*)
